Contract #: 13681

Agency: Adams County Public Health Department

Contract Year: 2006

Program: Immunization

Objective #: 1 of 1

Objective Value: \$6,460

Objective: Primary Details

Objective Statement

By December 31, 2006, 78% of children served by the Adams County Health Department Immunization Program who will be 24-35 months of age on December 31, 2006 will complete their primary immunizations by 24 months of age.

Deliverable Due Date: 01/31/2007

Contract Deliverable (Evidence)

A report to include documentation of the number of children served by the Adams County Health Department Immunization Program who were 24-35 months of age as of December 31, 2006, and those children who completed their primary immunizations by 24 months of age.

Programs Providing Funds for this Objective

Immunization: \$6,460

Agency Funds for this Objective:

Data Source for Measurement

Agency records and CASA Summary Report of up-to-date immunizations by 24 months of age.

Baseline for Measurement

It is expected that in 2005, 70% of the 24-35 month old children served by Adams County Health Department Immunization Program will receive their primary immunizations by 24 months of age.

Context

Children will be assessed for their completion of the 4 DTaP, 3 polio, 1 MMR, 3 Hib, 3 HepB, and varicella immunization series by 24 months of age. The estimate is there are 70 children in this cohort.

Input Activities

The Adams County Health Department Immunization Program will do reminder/recall through mail and/or telephone.

Immunization records will be obtained from or shared with other clinics and health care providers as needed. Immunizations will offered through WIC clinics.

Contract #: 13763
Program: Immunization

Agency: Appleton Health Department
Objective #: 1 of 3

Contract Year: 2006
Objective Value: \$14,000

Objective: Primary Details

Objective Statement

By December 31, 2006, 90% of children served by the Appleton Health Department Immunization Program who will be 24-35 months of age as of December 31, 2005 will complete their primary immunizations by 35 months of age.

Deliverable Due Date: 01/31/2007

Contract Deliverable (Evidence)

A report to include documentation of the number of children served by the Appleton Health Department Immunization Program who were 24-35 months of age as of December 31, 2005, and the number of those children who completed their primary immunizations by 35 months of age.

Programs Providing Funds for this Objective

Immunization: \$14,000

Agency Funds for this Objective:

Data Source for Measurement

Agency records and CASA Summary Report of late-up-to-date immunizations by 35 months of age.

Baseline for Measurement

Documentation dated June 1, 2005 from the Regional Office Immunization staff indicates 118 charts were reviewed and coverage level at Appleton Health Department was 93.22%.

Context

Children will be assessed for their completion of the 4 DTaP, 3 polio, 1 MMR, 3 Hib, 3 HepB immunization series by 35 months of age. The estimate is there are 70 children in this cohort of patients. The varicella immunization will also be assessed.

Input Activities

The Health Department will participate in the statewide registry. The activities will include notification to parents whose children are not up-to-date through tracking efforts including post clinic telephone calls, tiered intervention mailings, reminder postcards, physician and school communication, participation in the Hmong and Hispanic Interagency Partnerships and Housing Coalition. Tracking efforts will also include those children in the system eligible for state funded influenza vaccine. There will be outreach and vaccine provision efforts using interpreters to both the Hmong and Hispanic populations. The city of Appleton anticipates at least 200 new Hmong refugees by 2005. The Immunization Project Public Health Nurse will continue in a leadership role with the Northeast Wisconsin Immunization Coalition.

Objective Value: \$1,507

Objective: Primary Details

Objective Statement

By December 31, 2006, all under-insured city of Appleton residents with reported confirmed Hepatitis C infection will be provided Hepatitis A and B vaccine by the Appleton Health Department.

Deliverable Due Date: 01/31/2007

Contract Deliverable (Evidence)

An agency generated report documenting the number of unduplicated, under-insured clients with confirmed Hepatitis C who received Hepatitis A and B vaccine through the Appleton Health Department.

Programs Providing Funds for this Objective

Immunization: \$1,507

Agency Funds for this Objective:

Data Source for Measurement

Immunization Registry and Nursing Charting System DataBase.

Baseline for Measurement

Mid-year 2005 data, one individual from 2004 completed the series, 10 individuals are in process, one refused the immunizations, and one individual was referred to another jurisdiction.

Context

Hepatitis A and B vaccine is recommended for all individuals diagnosed with confirmed Hepatitis C infection.

Input Activities

The immunization Public Health Nurse will track the vaccine schedule in the registry system after referral from communicable disease staff. The Health Department will maintain linkages with the local Aids Resource Center, Fox Cities Community Clinic, Valley Health Services (methadone clinic) and area infectious disease and gastrointestinal specialists. The Department has a Memorandum of Understanding with both the Fox Cities Community Clinic and Planned Parenthood to provide enzyme immunoassay screening in cooperation with the Wisconsin Department of Health and Family Services and State Lab of Hygiene.

Contract Year: 2006
Objective Value: \$7,000

Objective: Primary Details

Objective Statement

By December 31, 2006, 100% of new refugee families resettled in the city of Appleton will receive targeted immunization outreach services.

Deliverable Due Date: 01/31/2007

Contract Deliverable (Evidence)

Agency generated report identifying the number of refugee families outreached, number of families accessing Appleton Health Department immunization services, and number of families accessing immunizations through their primary care provider.

Programs Providing Funds for this Objective

Immunization: \$7,000

Agency Funds for this Objective:

Data Source for Measurement

Agency records and immunization system reports.

Baseline for Measurement

In 2004, 86 refugees in 17 family units were settled in Appleton. An additional 86 refugees in 16 family units have resettled in Appleton to date in 2005.

Context

The Department of Workforce Development outreach funding ends 90 days after arrival in the United States. This objective will continue the outreach for completing the recommended immunizations for those families resettled in the city of Appleton.

Input Activities

Families will be contacted by the immunization Public Health Nurse or a contracted interpreter by phone to schedule an immunization appointment. Education on immunization will be incorporated into the lead prevention home visit by the Public Health Nurse, as appropriate. Family members will be entered into the immunization registry. Immunizations given by the primary provider will be documented. Clinics are set-up monthly with interpreters for culturally competent service delivery.

Contract #: 13682

Agency: Ashland County Health & Human Services Department

Contract Year: 2006

Program: Immunization

Objective #: 1 of 2

Objective Value: \$3,818

Objective: Primary Details

Objective Statement

During the contract period, 85% of infants born in Ashland County who turn three months of age in 2006 will receive 1 DTaP, 1 Polio, 1 Hib and 1 HepB vaccine by four months of age.

Deliverable Due Date: 01/31/2007

Contract Deliverable (Evidence)

A report to summarize a statistically valid survey that provides: 1) the total number of children born in Ashland County who turned three months of age in 2006, 2) CASA or Wisconsin Immunization Registry generated documentation of the number of those children who received 1 DTaP, 1 Polio, 1 Hib and 1 HepB vaccine by four months of age, and 3) the number of those children noted as moved or going elsewhere and those marked as non-responders.

Programs Providing Funds for this Objective

Immunization: \$3,818

Agency Funds for this Objective:

Data Source for Measurement

Wisconsin Immunization Registry records.

Baseline for Measurement

Data shows a coverage rate of 79.6% for the 1 DTaP, 1 Polio, 1 Hib and 1 HepB series for three-month olds. A CASA extract from the Wisconsin Immunization Registry was run using September 26, 2005 for the common review date with the assessment range of 12 to 24 months of age. The cohort (baseline) reviewed was 152 children.

Context

The cohort of children to be analyzed for this objective will be those children born during the period October 1, 2005, through September 30, 2006. Children will be assessed for having at least 1 DTaP, 1 Polio, 1 Hib and 1 HepB vaccine by four months of age. Only children who have moved out of the agency's jurisdiction (MOGE) or have failed to respond to three reminder/recall attempts or their mail has been returned undeliverable may be removed from the cohort for analysis. The goal of this objective is to help identify patient and system level barriers that place children at risk of not completing their primary series of immunization on schedule. Access to primary and preventive health services is one of the priorities identified in Wisconsin's State Health Plan, Healthiest People 2010: A Partnership Plan to Improve the Health of the Public. Children who begin their community-based immunizations by three months of age are more likely to complete the primary series of 4 DTaP, 3 Polio, 1 MMR, 3 Hib, 3 HepB and 1 Varicella by 24 months of age. This objective also addresses the Healthy People 2010: 14-26 goal to "Increase the proportion of children who participate in fully operational population-based immunization registries" by identifying local gaps in Wisconsin Immunization Registry.

Input Activities

The Ashland County Health Department will meet with area clinic providers to promote the immunization schedule. The Health Department will supply clinic staff with all current immunization information and updates, will offer Wisconsin Immunization Registry assistance, and will offer to have an immunization expert available for onsite visits. The Ashland County Health Department will use local media to promote immunization of children and maintaining the recommended schedule.

Contract #: 13605

Agency: Bad River Tribe

Contract Year: 2006

Program: Immunization

Objective #: 1 of 1

Objective Value: \$3,940

Objective: Primary Details

Objective Statement

By September 30, 2006, at least 90% of children served by the Bad River Tribal Health Center, who were 12-35 months of age as of January 1, 2006, will receive age appropriate immunizations.

Deliverable Due Date: 10/31/2006

Contract Deliverable (Evidence)

CASA Report, Wisconsin Immunization Registry Report, Resource and Patient Management System (RPMS) report, and Maternal Child Health - Public Health Nurse monthly report indicating the number of children ages 12-35 months of age served by the Bad River Tribal Health Center and the number of those children who have completed age appropriate immunizations.

Programs Providing Funds for this Objective

Immunization: \$3,940

Agency Funds for this Objective:

Data Source for Measurement

CASA Report, WIR Report, and Resource and Patient Management System.

Baseline for Measurement

Our goal, mandated by Indian Health Services, has been a 90% plus immunization rate from birth through 36 months. We serve approximately 135 children ages birth through 36 months here at Bad River.

Context

By September 30, 2006, at least 90% of children birth through 36 months who are active users of the Bad River Immunization services will have received age appropriate vaccinations as per State of Wisconsin recommendations. Documentation will be entered into the child's medical record on the immunization sheet.

Input Activities

Provide individual, on demand, vaccinations with or without appointments. Conduct monthly immunization clinics at the Bad River Health and Wellness Center. Provide immunization education and anticipatory guidance to prenatal and postpartum families. Provide transportation to immunization appointments when needed. Complete and update the CASA report. Enter immunizations on the Resource and Patient Management System. Contact parents when immunizations are due.

Objective #: 1 of 1

Objective Value: \$11,436

Objective: Primary Details

Objective Statement

By December 31, 2006, 72% of children residing in Barron County who turn 19 months of age during 2006 will have their 4th dose of DTaP.

Deliverable Due Date: 01/31/2007

Contract Deliverable (Evidence)

A report to summarize a statistically valid survey that provides: 1) the total number of children residing in Barron County who turned 19 months of age in 2006, 2) CASA or Wisconsin Immunization Registry generated documentation of the number of those children who have their 4th dose of DTaP, and 3) the number of those children noted as moved or going elsewhere and those marked as non-responders.

Programs Providing Funds for this Objective

Immunization: \$11,436

Agency Funds for this Objective:

Data Source for Measurement

Wisconsin Immunization Registry records.

Baseline for Measurement

This is a new objective for 2006.

Context

Children who will turn 19 months of age during the contract year 2006 will be assessed for receipt of the 4th dose of DTaP. Only children who have moved out of the agency's jurisdiction (MOGE) or have failed to respond to three reminder/recall attempts or their mail has been returned undeliverable may be removed from the cohort for analysis.

Input Activities

Barron County Health Department will provide some advertising regarding immunizations as well as conduct meetings with health care providers to learn more about existing immunization practices and data entry. Barron County Health Department will initiate an immunization education campaign directed at parents, day care providers and health care providers. Information on immunizations will be provided through WIC, direct contact with community members at health fairs and through promotional materials at local clinics and businesses.

Objective Statement

By December 31, 2006, 65% of children residing in Bayfield County who turn 19 months of age during 2006 will have their 4th dose of DTaP.

Deliverable Due Date: 01/31/2007

Contract Deliverable (Evidence)

A report to summarize a statistically valid survey that provides: 1) the total number of children residing in Bayfield County who turned 19 months of age in 2006, 2) CASA or Wisconsin Immunization Registry generated documentation of the number of those children who have their 4th dose of DTaP, and 3) the number of those children noted as moved or going elsewhere and those marked as non-responders.

Programs Providing Funds for this Objective

Immunization: \$7,195

Agency Funds for this Objective:

Data Source for Measurement

Wisconsin Immunization Registry records.

Baseline for Measurement

CASA extract was completed using December 31, 2004 for the common review date, looking at the 4th dose of DTaP at 19 months of age. 98 records were assessed and the coverage for the 4th dose of DTaP was 58% at 19 months of age.

Context

Children who will turn 19 months of age during the contract year 2006 will be assessed for receipt of the 4th dose of DTaP. Only children who have moved out of the agency's jurisdiction (MOGE) or have failed to respond to three reminder/recall attempts or their mail has been returned undeliverable may be removed from the cohort for analysis.

Input Activities

The Health Department will educate health care providers, parents, and day care providers about vaccine and schedule. WIC participant parents will be asked to bring immunizations record into the clinic. The record will be researched and placed into the Wisconsin Immunization Registry if the immunization providers have not entered the record into the WIR database.

Contract #: 13685
Program: Immunization

Agency: Brown County Health Department
Objective #: 1 of 2

Contract Year: 2006
Objective Value: \$32,816

Objective: Primary Details

Objective Statement

During the contract period, 75% of infants born in Brown County (excluding the city of De Pere) who turn three months of age in 2006 will receive 1 DTaP, 1 Polio, 1 Hib and 1 HepB vaccine by four months of age.

Deliverable Due Date: 01/31/2007

Contract Deliverable (Evidence)

A report to summarize a statistically valid survey that provides: 1) the total number of children born in Brown County who turned three months of age in 2006, 2) CASA or Wisconsin Immunization Registry generated documentation of the number of those children who received 1 DTaP, 1 Polio, 1 Hib and 1 HepB vaccine by four months of age, and 3) the number of those children noted as moved or going elsewhere and those marked as non-responders.

Programs Providing Funds for this Objective

Immunization: \$32,816

Agency Funds for this Objective:

Data Source for Measurement

Wisconsin Immunization Registry records.

Baseline for Measurement

This is a new objective so there is no baseline information. A review of a sample of the 2005 Brown County Health Department CASA cohort reflects that 74% started immunizations by three months of age. However, this is not the birth cohort and it is not known how this reflects that population.

Context

The cohort of children to be analyzed for this objective will be those children born during the period October 1, 2005 through September 30, 2006. Children will be assessed for having at least 1 DTaP, 1 Polio, 1 Hib and 1 HepB vaccine by four months of age. Only children who have moved out of the agency's jurisdiction (MOGE) or have failed to respond to three reminder/recall attempts or their mail has been returned undeliverable may be removed from the cohort for analysis. The goal of this objective is to help identify patient and system level barriers that place children at risk of not completing their primary series of immunization on schedule. Access to primary and preventive health services is one of the priorities identified in Wisconsin's State Health Plan, Healthiest People 2010: A Partnership Plan to Improve the Health of the Public. Children who begin their community-based immunizations by three months of age are more likely to complete the primary series of 4 DTaP, 3 Polio, 1 MMR, 3 Hib, 3 HepB and 1 Varicella by 24 months of age. This objective also addresses the Healthy People 2010: 14-26 goal to "Increase the proportion of children who participate in fully operational population-based immunization registries" by identifying local gaps in Wisconsin Immunization Registry.

Input Activities

Brown County had a birth cohort of approximately 3,247 in 2003; a sample of 809 will be surveyed to determine the percent that have 1 DTaP, 1 Polio, 1 Hib and 1 HepB vaccine by three months of age. The survey sample will be determined randomly. Wisconsin Immunization Registry (WIR) records will be reviewed to determine how many of the children have started immunizations. When records cannot be found on WIR, letters will be sent requesting vaccine history and a self addressed stamped envelope will be included to encourage/enhance response. Follow-up letters will be sent when there is no response. A total of three attempts will be made to get information.

Program: Immunization

Agency: Brown County Health Department
Objective #: 2 of 2

Contract Year: 2006
Objective Value: \$21,877

Objective: Primary Details

Objective Statement

By December 31, 2006, 79% of the children served by the Brown County Health Department Immunization Program who will be 24-35 months of age on December 31, 2006 will complete their primary immunization series, including varicella, by 35 months of age.

Deliverable Due Date: 01/31/2007

Contract Deliverable (Evidence)

A report to include documentation of the number of children served by the Brown County Health Department Immunization Program who were 24-35 months of age as of December 31, 2006, and the number of those children who completed their primary immunization series, including varicella, by 35 months of age.

Programs Providing Funds for this Objective

Immunization: \$21,877

Agency Funds for this Objective:

Data Source for Measurement

Agency records and CASA Summary Report of late up-to-date immunizations by 35 months of age.

Baseline for Measurement

The CASA Summary Report for the project cohort for 2005 shows that 78% have completed a series of 4 DTaP, 3 polio, 1 MMR, 1 Varivax, 3 HIB and 3 HepB by age 35 months of age.

Context

Children will be assessed for their completion of the 4 DTaP, 3 polio, 1 MMR, 1 varicella, 3 HIB, 3 HepB immunizations by 35 months of age. The estimate is that there are 1,000 children in this cohort of clients.

Input Activities

A CASA audit will be done for the age cohort. Outreach and follow-up will be conducted for children who have not completed the primary immunization series. Bilingual staff will be involved in this project to enhance outreach to limited English proficiency families.

Contract #: 13686

Agency: Buffalo County Health & Human Services Department

Contract Year: 2006

Program: Immunization

Objective #: 1 of 1

Objective Value: \$5,907

Objective: Primary Details

Objective Statement

By December 31, 2006, 57% of children residing in Buffalo County Department of Health and Human Services jurisdiction who turn 19 months of age during 2006 will have their 4th dose of DTaP.

Deliverable Due Date: 01/31/2007

Contract Deliverable (Evidence)

A report to summarize a statistically valid survey that provides: 1) the total number of children residing in Buffalo County Department of Health and Human Services jurisdiction who turned 19 months of age in 2006, 2) CASA or Wisconsin Immunization Registry generated documentation of the number of those children who have their 4th dose of DTaP, and 3) the number of those children noted as moved or going elsewhere and those marked as non-responders.

Programs Providing Funds for this Objective

Immunization: \$5,907

Agency Funds for this Objective:

Data Source for Measurement

Wisconsin Immunization Registry records.

Baseline for Measurement

A CASA extract from the Wisconsin Immunization Registry, using September 28, 2005 for the common review date with the assessment range of 12 to 24 months of age. The total records in clinic was 121 with 26 records assessed. Looking at the 4th dose of DTaP, the coverage rate for children 19 months of age is 55%.

Context

Children who will turn 19 months of age during the contract year 2006 will be assessed for receipt of the 4th dose of DTaP. Only children who have moved out of the agency's jurisdiction (MOGE) or have failed to respond to three reminder/recall attempts or their mail has been returned undeliverable may be removed from the cohort for analysis.

Agency: Burnett County Department of Health & Human Services

Contract Year: 2006

Program: Immunization

Objective #: 1 of 1

Objective Value: \$6,439

Objective: Primary Details

Objective Statement

By December 31, 2006, 90% of children residing in Burnett County who turn 19 months of age during 2006 will have their 4th dose of DTaP.

Deliverable Due Date: 01/31/2007

Contract Deliverable (Evidence)

A report to summarize a statistically valid survey that provides: 1) the total number of children residing in Burnett County who turned 19 months of age in 2006, 2) CASA or Wisconsin Immunization Registry generated documentation of the number of those children who have their 4th dose of DTaP, and 3) the number of those children noted as moved or going elsewhere and those marked as non-responders.

Programs Providing Funds for this Objective

Immunization: \$6,439

Agency Funds for this Objective:

Data Source for Measurement

Regional Early Childhood Immunization Network (RECIN) Immunization Registry records.

Baseline for Measurement

In 2004, 98.44% of children 24-35 months of age received age appropriate immunizations and 90.63% of children 12 months of age received age appropriate immunizations.

Context

Children who will turn 19 months of age during the contract year 2006 will be assessed for receipt of the 4th dose of DTaP. Only children who have moved out of the agency's jurisdiction (MOGE) or have failed to respond to three reminder/recall attempts or their mail has been returned undeliverable may be removed from the cohort for analysis.

Input Activities

Burnett County Health Department currently utilizes the Regional Early Childhood Immunization Network (RECIN). Our agency also has administrative rights for the Wisconsin Immunization Registry (WIR). A monthly reminder and recall system is in place within our department which covers all children of Burnett County, including local medical providers. Burnett County DHHS also has a Memorandum of Understanding in place with the St. Croix Tribal Health Department and Burnett County provides services for data entry of immunizations into WIR for the St. Croix Tribal Health Department.

Contract #: 13778
Program: Immunization

Agency: Caledonia/Mt Pleasant Health Department
Objective #: 1 of 1

Contract Year: 2006
Objective Value: \$9,599

Objective: Primary Details

Objective Statement

By December 31, 2006, 90% of children served by the Caledonia/Mt. Pleasant Health Department Immunization Program who will be 24 to 35 months of age as of December 31, 2006 will complete their primary immunization by 24 months of age.

Deliverable Due Date: 01/31/2007

Contract Deliverable (Evidence)

A report to include documentation of the number of children served by the Caledonia/Mt. Pleasant Health Department Immunization Program who were 24 to 35 months of age as of December 31, 2006, and the number of those children who completed their primary immunizations by 24 months of age.

Programs Providing Funds for this Objective

Immunization: \$9,599

Agency Funds for this Objective:

Data Source for Measurement

Agency records and CASA Summary Report of up-to-date immunizations by 24 months of age.

Baseline for Measurement

December 10, 2003, CASA Summary Report was 88.24%. December 12, 2004, CASA Summary Report was 91%.

Context

Children will be assessed for their completion of the 4 DTaP, 3 Polio, 1 MMR, 3 Hib, 3 HepB, 1 Varicella immunization series by 24 months of age. Additional activities will examine the options of implementing a population-based immunization assessment for 2007.

Input Activities

The Caledonia/Mt. Pleasant Health Department will continue scheduling off-site clinics at varied hours and accessible locations. Aggressive tracking and recall of immunization clients will be done. Education regarding immunization schedule and resources will be provided to families of all newborns. In addition, include a return postcard to the parents of newborns so they may provide the Health Department with the infant's first set of shot dates if received other than from this department (new initiative). Permission to enter the data into the Wisconsin Immunization Registry (WIR) will be needed or assumed if postcard is returned. The Health Department will continue to publish immunization schedules and clinic locations in the Racine Journal Times and the Milwaukee Journal Sentinel. The Health Department will mail birthday cards as an immunization reminder to one-year old clients known to the Health Department. This Health Department will offer accelerated vaccine scheduling to new, under-vaccinated clients. New initiatives: 1) The Health Department will attempt to obtain permission from all parents from two local physician practices to data enter into the WIR. Immunization records will be assessed and parents will be notified if their child(ren) need additional age-appropriate immunization(s). A list of children who are behind with their immunizations will be given to their physicians. 2) The Health Department will explore ways to implement a population-based assessment based on the 1-1-1-1 series of immunizations. The Health Department will attempt to partner with the City of Racine and Western Racine County Health Departments in order to assess population-based activity rates.

Agency: Calumet County Health Department
Objective #: 1 of 1

Contract Year: 2006
Objective Value: \$8,319

Objective: Primary Details

Objective Statement

During the contract period, 90% of infants born in Calumet County who turn three months of age in 2006 will receive 1 DTaP, 1 Polio, 1 Hib and 1 HepB vaccine by four months of age.

Deliverable Due Date: 01/31/2007

Contract Deliverable (Evidence)

A report to summarize a statistically valid survey that provides: 1) the total number of children born in Calumet County who turned three months of age in 2006, 2) CASA or Wisconsin Immunization Registry generated documentation of the number of those children who received 1 DTaP, 1 Polio, 1 Hib and 1 HepB vaccine by four months of age, and 3) the number of those children noted as moved or going elsewhere and those marked as non-responders.

Programs Providing Funds for this Objective

Immunization: \$8,319

Agency Funds for this Objective:

Data Source for Measurement

Wisconsin Immunization Registry records.

Baseline for Measurement

New initiative.

Context

The cohort of children to be analyzed for this objective will be those children born during the period October 1, 2005 through September 30, 2006. Children will be assessed for having at least 1 DTaP, 1 Polio, 1 Hib and 1 HepB vaccine by four months of age. Only children who have moved out of the agency's jurisdiction (MOGE) or have failed to respond to three reminder/recall attempts or their mail has been returned undeliverable may be removed from the cohort for analysis. The goal of this objective is to help identify patient and system level barriers that place children at risk of not completing their primary series of immunization on schedule. Access to primary and preventive health services is one of the priorities identified in Wisconsin's State Health Plan, Healthiest People 2010: A Partnership Plan to Improve the Health of the Public. Children who begin their community-based immunizations by three months of age are more likely to complete the primary series of 4 DTaP, 3 Polio, 1 MMR, 3 Hib, 3 HepB and 1 Varicella by 24 months of age. This objective also addresses the Healthy People 2010: 14-26 goal to "Increase the proportion of children who participate in fully operational population-based immunization registries" by identifying local gaps in Wisconsin Immunization Registry.

Input Activities

An attempt will be made to contact all parents of newborns and provide them with immunization information. A nurse will be available for immunization information and administration at all WIC clinics.

Immunization: \$7,000

Agency Funds for this Objective:

Data Source for Measurement

Wisconsin Immunization Registry records. Will also require use of CASA and Wisconsin Birth Records in SPHERE. Assistance from the Wisconsin Immunization Program in accurate data collection will be required.

Baseline for Measurement

New objective focusing on infants three months of age.

Context

The cohort of children to be analyzed for this objective will be those children born to residents in Chippewa County during the period October 1, 2005 through September 30, 2006. Children will be assessed for having at least 1 DTaP, 1 Polio, 1 Hib and 1 HepB vaccine by four months of age. Only children who have moved out of the agency's jurisdiction (MOGE) or have failed to respond to three reminder/recall attempts or their mail has been returned undeliverable may be removed from the cohort for analysis. The goal of this objective is to help identify patient and system level barriers that place children at risk of not completing their primary series of immunization on schedule. Access to primary and preventive health services is one of the priorities identified in Wisconsin's State Health Plan, Healthiest People 2010: A Partnership Plan to Improve the Health of the Public. Children who begin their community-based immunizations by three months of age are more likely to complete the primary series of 4 DTaP, 3 Polio, 1 MMR, 3 Hib, 3 HepB and 1 Varicella by 24 months of age. This objective also addresses the Healthy People 2010: 14-26 goal to "Increase the proportion of children who participate in fully operational population-based immunization registries" by identifying local gaps in Wisconsin Immunization Registry.

Input Activities

The Health Department will hold immunization clinics within the jurisdiction; notify the public about access to the clinics (through phone menus, newspaper inclusion, publication of a clinic schedule guide); manage doses given, inventory, recalls, and outreach to those behind schedule through the Wisconsin Immunization Registry. These input activities may be considered as accountability targets.

Contract Deliverable (Evidence)

A report to summarize a statistically valid survey that provides: 1) the total number of children residing in Chippewa County who turned 19 months of age in 2006, 2) CASA or Wisconsin Immunization Registry generated documentation of the number of those children who have their 4th dose of DTaP, and 3) the number of those children noted as moved or going elsewhere and those marked as non-responders.

Programs Providing Funds for this Objective

Immunization: \$7,587

Agency Funds for this Objective:

Data Source for Measurement

Wisconsin Immunization Registry records.

Baseline for Measurement

New focus on this target age group. Will also require use of CASA and Wisconsin Birth Records in SPHERE. Assistance from the Wisconsin Immunization Program in accurate data collection will be required. FYI TEXT: 2003 National Immunization Survey data indicates that only 74.3% of Wisconsin's 19 month olds had received their 4th dose of DTaP. Baseline data using DTaP vaccine as an indicator will assist the agency in identifying children who are at greatest need of access to primary health care or further interventions. The Wisconsin Immunization Program recommends the following activities to help ensure success of this objective: contact parents of infants without immunization histories, reminder/recall, follow-up interventions to complete series, tracking, share information with area physicians and request that information be entered into the Wisconsin Immunization Registry.

Context

Children who will turn 19 months of age during the contract year 2006 and who live in Chippewa County will be assessed for receipt of the 4th dose of DTaP. Only children who have moved out of the agency's jurisdiction (MOGE) or have failed to respond to three reminder/recall attempts or their mail has been returned undeliverable may be removed from the cohort for analysis.

Input Activities

The Health Department will hold immunization clinics within the jurisdiction; notify the public about access to the clinics (through phone menus, newspaper inclusion, publication of a clinic schedule guide); manage doses given, inventory, recalls, and outreach to those behind schedule through the Wisconsin Immunization Registry. These input activities may be considered as accountability targets.

Objective: Primary Details

Objective Statement

During the contract period, 82% of infants born in Clark County who turn three months of age in 2006 will receive 1 DTaP, 1 Polio, 1 Hib and 1 HepB vaccine by four months of age.

Deliverable Due Date: 01/31/2007

Contract Deliverable (Evidence)

A report to summarize a statistically valid survey that provides: 1) the total number of children born in Clark County who turned three months of age in 2006, 2) CASA or Wisconsin Immunization Registry generated documentation of the number of those children who received 1 DTaP, 1 Polio, 1 Hib and 1 HepB vaccine by four months of age, and 3) the number of those children noted as moved or going elsewhere and those marked as non-responders.

Programs Providing Funds for this Objective

Immunization: \$7,000

Agency Funds for this Objective:

Data Source for Measurement

Wisconsin Immunization Registry records.

Baseline for Measurement

Clark County has a disproportionate number of Amish and Mennonite living in the county. The Clark County UW-Extension office has estimated that the Amish and Mennonite make up 1/3 of Clark County's total population. The Amish and Mennonite are slow to immunize, if at all. According to the 40 day report in 2004, there were 1,057 children (grades 1-8) enrolled in Amish and Mennonite schools. This compares to 5,933 children (grades K-12) enrolled in public/private schools in the county. According to the Regional Early Childhood Immunization Network, our current up-to-date immunization rate for all Clark County infants under four months of age is 80.4%

Context

The cohort of children to be analyzed for this objective will be those children born during the period October 1, 2005 through September 30, 2006. Children will be assessed for having at least 1 DTaP, 1 Polio, 1 Hib and 1 HepB vaccine by four months of age. Only children who have moved out of the agency's jurisdiction (MOGE) or have failed to respond to three reminder/recall attempts or their mail has been returned undeliverable may be removed from the cohort for analysis. The goal of this objective is to help identify patient and system level barriers that place children at risk of not completing their primary series of immunization on schedule. Access to primary and preventive health services is one of the priorities identified in Wisconsin's State Health Plan, Healthiest People 2010: A Partnership Plan to Improve the Health of the Public. Children who begin their community-based immunizations by three months of age are more likely to complete the primary series of 4 DTaP, 3 Polio, 1 MMR, 3 Hib, 3 HepB and 1 Varicella by 24 months of age. This objective also addresses the Healthy People 2010: 14-26 goal to "Increase the proportion of children who participate in fully operational population-based immunization registries" by identifying local gaps in Wisconsin Immunization Registry.

Input Activities

The Clark County Health Department will utilize the Regional Early Childhood Immunization Network (RECIN) to do monthly reminder/recall via mail and/or telephone. Immunization records will be obtained from and shared with other health care providers as necessary. Immunizations will be offered at weekly walk-in clinics and three monthly outreach immunization clinics throughout the county. Immunization clinics are also held in Amish and Mennonite acceptable locations at various times during the year.

During the contract period, 70% of children residing in the Clark County Health Department jurisdiction who will be 12-35 months of age as of December 31, 2006 will complete their primary immunizations by 35 months of age.

Deliverable Due Date: 01/31/2007

Contract Deliverable (Evidence)

A report to include documentation of the number of children residing in the Clark County Health Department jurisdiction who were 12-35 months of age as of December 31, 2006, and the number of those children who completed their primary immunizations by 35 months of age.

Programs Providing Funds for this Objective

Immunization: \$5,227

Agency Funds for this Objective:

Data Source for Measurement

Agency records and CASA Summary Report of late up-to-date immunizations by 35 months of age.

Baseline for Measurement

According to an October 2005 CASA report, the coverage for children ages 12 to 35 months old for the 4 DTaP, 3 polio, 1 MMR, 3 Hib, 3 HepB, 1 varicella immunization series in Clark County is 68%. Additionally in 2004, 219 unduplicated Amish and Mennonite preschool children (five years and younger) received immunizations from the Clark County Health Department, 132 (60%) of whom were up-to-date with their immunizations. From January through August 2005, 179 unduplicated preschool children have received immunizations from the Clark County Health Department, 119 (66%) of whom are up-to-date.

Context

Children will be assessed for their completion of the 4 DTaP, 3 polio, 1 MMR, 3 Hib, 3 HepB, 1 varicella immunization series by 35 months of age. A rough estimate is that there are 1,100 children in this cohort of patients in Clark County. Because of their culture, many Amish and Mennonite families decline HepB and varicella vaccines. It is their belief that having chicken pox is part of childhood, and there is no need to be vaccinated. Most Amish and Mennonite families feel that they have little or no risk of acquiring HepB, and therefore do not wish to vaccinate their children against it. Many families believe immunizations should not be given to infants, but instead started later in childhood. Increasing immunization rates in these populations is very time intensive. Outreach is ongoing with face-to-face contacts with Bishops and individual families. It takes several years to build trusting relationships with them, and to see a positive outcome.

Input Activities

The Clark County Health Department will do reminder/recall through mail and/or telephone. Immunizations are available at weekly walk-in clinics at the Health Department, and at three monthly outreach clinics held throughout the county. The Clark County Health Department will hold immunization clinics in eight Mennonite schools at four different times throughout the year. Four additional immunization clinics will be held for the Amish population at appropriate locations, typically in one of their homes.

Contract #: 13692
Program: Immunization

Agency: Columbia County Division of Health
Objective #: 1 of 1

Contract Year: 2006
Objective Value: \$12,950

Objective: Primary Details

Objective Statement

By December 31, 2006, 75% of children served by the Columbia County Division of Health Immunization Program who will be 24-35 months of age on December 31, 2006 will complete their primary immunizations by 24 months of age.

Deliverable Due Date: 01/31/2007

Contract Deliverable (Evidence)

A report to include documentation of the number of children served by the Columbia County Division of Health Immunization Program who were 24-35 months of age as of December 31, 2006, and the number of those children who completed their primary immunizations by 24 months of age.

Programs Providing Funds for this Objective

Immunization: \$12,950

Agency Funds for this Objective:

Data Source for Measurement

Agency records and CASA Summary Report of up-to-date immunizations by 24 months of age.

Baseline for Measurement

By December 31, 2005, 71% of children served by the Columbia County Division of Health Immunization Program who will be 24-35 months of age by December 31, 2005 will complete their primary immunization by 24 months of age.

Context

Children will be assessed for their completion of the 4 DTaP, 3 Polio, 1 MMR, 3 Hib, 3 HepB immunization series by 24 months of age. The estimate is there are 87 children in this cohort of patients.

Input Activities

CASA audit. Columbia County Division of Health will begin measuring varicella rates of children served by our agency who will be 24-35 months of age on December 31, 2006 in order to establish a baseline for inclusion in 2007. Columbia County Division of Health is most likely going to purchase the Teletask Autodialer in 2005 in order to increase recall/reminder rates for 2006 and beyond.

Contract #: 13765

Agency: Cudahy Health Department

Contract Year: 2006

Program: Immunization

Objective #: 1 of 2

Objective Value: \$10,000

Objective: Primary Details

Objective Statement

By December 31, 2006, 85% of children residing in Cudahy and Oak Creek who turn 19 months of age during 2006 will have their 4th dose of DTaP.

Deliverable Due Date: 01/31/2007

Contract Deliverable (Evidence)

A report to summarize a statistically valid survey that provides: 1) the total number of children residing in Cudahy and Oak Creek who turned 19 months of age in 2006, 2) CASA or Wisconsin Immunization Registry generated documentation of the number of those children who have their 4th dose of DTaP, and 3) the number of those children noted as moved or going elsewhere and those marked as non-responders.

Programs Providing Funds for this Objective

Immunization: \$10,000

Agency Funds for this Objective:

Data Source for Measurement

Wisconsin Immunization Registry records.

Baseline for Measurement

This is a new initiative so baseline data will be established during the contract period.

Context

Children who will turn 19 months of age during the contract year 2006 will be assessed for receipt of the 4th dose of DTaP. Only children who have moved out of the agency's jurisdiction (MOGE) or have failed to respond to three reminder/recall attempts or their mail has been returned undeliverable may be removed from the cohort for analysis.

Input Activities

Utilizing a program that is being developed by the Wisconsin Immunization Registry, 19 month old children from Cudahy and Oak Creek will be assessed for the presence of the 4th DTaP. Families of the 19 month old children who do not have their 4th DTaP will be contacted by the appropriate local health agency. They will be urged to obtain needed immunizations at their primary physician or their local health agency.

Objective: Primary Details

Objective Statement

By December 31, 2006, 60% of all WIC children between the ages 0 to 60 months enrolled at the Cudahy and Greenfield sites who have an incomplete immunization series and reside in Cudahy, Greenfield or Oak Creek will be up-to-date for their age.

Deliverable Due Date: 01/31/2007

Contract Deliverable (Evidence)

The final summary of a ROSIE ADHOC report created for the agency that includes the number of children who were 0 to 60 months of age enrolled in the Cudahy or Greenfield sites and resided in Cudahy, Greenfield or Oak Creek, and the percentage of the children who were up-to-date for their stated immunization series.

Programs Providing Funds for this Objective

Immunization: \$5,615

Agency Funds for this Objective:

Data Source for Measurement

WIC reports.

Baseline for Measurement

This is a new initiative so baseline data will be established during the contract period.

Context

According to Healthy People 2010, the proportion of young children who receive all vaccines that have been recommended for universal administration (that is, 4 DTap, 3 polio, 1 MMR, 3 Hib, 3 HepB) should increase to at least 80%.

Input Activities

The consortium grant coordinator will receive the WIC appointment schedule approximately a week prior to the clinic visit. The coordinator will review the immunization status of the WIC children using the Wisconsin Immunization Registry (WIR) and code each appointment as to the immunization status. The grant coordinator will educate the appropriate WIC staff regarding immunization compliance. The grant coordinator will reinstate an immunization incentive program at the Cudahy and Greenfield WIC sites, will encourage parents to completely immunize their children and present their children's immunization records at each WIC appointment. The grant coordinator will analyze the Cudahy and Greenfield WIC Incomplete Immunization Reports or comparable ROSIE reports on a quarterly basis to track children who are not compliant. Any immunization records that are not in WIR will be entered by the grant coordinator. The Cudahy and Greenfield WIC sites will place families on one-month issuance when the child is behind schedule with his or her immunizations.

Objective: Primary Details

Objective Statement

By December 31, 2006, 80% of children served by the Dane County Department of Human Services, Division of Public Health Immunization Program who will be 24-35 months of age on December 31, 2006 will complete their primary immunizations by 24 months of age.

Deliverable Due Date: 01/31/2007

Contract Deliverable (Evidence)

A report to include documentation of the number of children served by the Dane County Department of Health and Human Services, Division of Public Health Immunization Program who were 24-35 months of age as of December 31, 2006, and the number of those children who had received 4 DTaP, 3 polio, 1 MMR, 3 Hib, 3 HepB, and 1 varicella by 24 months of age.

Programs Providing Funds for this Objective

Immunization: \$15,131

Agency Funds for this Objective:

Data Source for Measurement

Wisconsin Immunization Registry records.

Baseline for Measurement

In July 2005, a CASA report showed that 85% of 176 children who were 24-35 months of age completed their primary immunizations by 35 months of age.

Context

In Dane County, the vast majority of children receive immunizations from private providers. The agency provides immunizations to children with no health insurance, many of whom are foreign born, children on health insurance with high deductibles or copayments and children on Medical Assistance. Many of the families served by the agency are new to the county and do not have a medical home.

Input Activities

The agency will outreach to the families of children needing immunizations using media campaigns, immunization clinics, announcements and reminder mailings.

Agency: Dane County Human Services Department, Division of Public Health

Contract Year: 2006

Program: Immunization

Objective #: 2 of 2

Objective Value: \$30,000

Objective: Primary Details

Objective Statement

By December 31, 2006, 68% of children residing in Dane County, outside of the city of Madison, who turn 19 months of age during 2006 will have their 4th dose of DTaP.

Deliverable Due Date: 01/31/2007

Contract Deliverable (Evidence)

A report to summarize a statistically valid survey that provides: 1) the total number of children residing in Dane County, outside of the city of Madison, who turned 19 months of age in 2006, 2) CASA or Wisconsin Immunization Registry generated documentation of the number of those children who have their 4th dose of DTaP, and 3) the number of those children noted as moved or going elsewhere (MOGE) and those marked as non-responders.

Programs Providing Funds for this Objective

Immunization: \$30,000

Agency Funds for this Objective:

Data Source for Measurement

Wisconsin Immunization Registry records.

Baseline for Measurement

This is a new objective.

Context

Children who will turn 19 months of age during the contract year 2006 will be assessed for receipt of the 4th dose of DTaP. Only children who have moved out of the agency's jurisdiction (MOGE) or have failed to respond to three reminder/recall attempts or their mail has been returned undeliverable may be removed from the cohort for analysis. A major provider of immunizations for children in Dane County is not using the Wisconsin Immunization Registry system. The agency provides immunizations to less than 5% of children younger than 19 months of age. In November 2005, 64.59% of 19 month old children had received their 4th DTaP.

Input Activities

The agency will encourage improved immunization rates through activities such as; a symposium for health care providers about current immunization practices, a media campaign designed to increase awareness of the benefits of immunization for Dane County residents particularly parents, technical assistance for private health care providers about using the Wisconsin Immunization Registry (WIR) system for reminder/recall activities and technical assistance to help health care providers begin to use the WIR system.

Program: Immunization

Agency: De Pere Department of Public Health
Objective #: 1 of 1

Contract Year: 2006
Objective Value: \$5,519

Objective: Primary Details

Objective Statement

During the contract period, 85% of infants born in the city of DePere who turn three months of age in 2006 will receive 1 DTaP, 1 Polio, 1 Hib and 1 HepB vaccine by four months of age.

Deliverable Due Date: 01/31/2007

Contract Deliverable (Evidence)

A report to summarize a statistically valid survey that provides: 1) the total number of children born in the city of DePere who turned three months of age in 2006, 2) CASA or Wisconsin Immunization Registry generated documentation of the number of those children who received 1 DTaP, 1 Polio, 1 Hib and 1 HepB vaccine by four months of age, and 3) the number of those children noted as moved or going elsewhere and those marked as non-responders.

Programs Providing Funds for this Objective

Immunization: \$5,519

Agency Funds for this Objective:

Data Source for Measurement

Wisconsin Immunization Registry records.

Baseline for Measurement

New initiative.

Context

The cohort of children to be analyzed for this objective will be those children born during the period October 1, 2005 through September 30, 2006. Children will be assessed for having at least 1 DTaP, 1 Polio, 1 Hib and 1 HepB vaccine by four months of age. Only children who have moved out of the agency's jurisdiction (MOGE) or have failed to respond to three reminder/recall attempts or their mail has been returned undeliverable may be removed from the cohort for analysis. The goal of this objective is to help identify patient and system level barriers that place children at risk of not completing their primary series of immunization on schedule. Access to primary and preventive health services is one of the priorities identified in Wisconsin's State Health Plan, Healthiest People 2010: A Partnership Plan to Improve the Health of the Public. Children who begin their community-based immunizations by three months of age are more likely to complete the primary series of 4 DTaP, 3 Polio, 1 MMR, 3 Hib, 3 HepB and 1 Varicella by 24 months of age. This objective also addresses the Healthy People 2010: 14-26 goal to "Increase the proportion of children who participate in fully operational population-based immunization registries" by identifying local gaps in Wisconsin Immunization Registry.

Input Activities

Follow SPHERE birth records, mail immunization schedule information, follow-up phone calls. Utilize CASA and Wisconsin Immunization Registry for data tracking.

Objective Statement

By December 31, 2006, 86% of children served by the Dodge County Human Services & Health Department Immunization Program who will be 24-35 months of age as of December 31, 2006 will complete their primary immunizations by 24 months of age.

Deliverable Due Date: 01/31/2007

Contract Deliverable (Evidence)

A report to include documentation of the number of children served by the Dodge County Human Services and Health Department Immunization Program who were 24-35 months of age as of December 31, 2006, and the number of those children who completed their primary immunizations by 24 months of age.

Programs Providing Funds for this Objective

Immunization: \$9,316

Agency Funds for this Objective:

Data Source for Measurement

Agency records and CASA Summary Report of late-up-to-date immunizations by 24 months of age.

Baseline for Measurement

It is estimated that we will achieve our goal of 83% of children who will have completed their primary immunizations by 24 months of age in 2005.

Context

Children will be assessed for the completion of the 4 DTaP, 3 polio, 1 MMR, 3 Hib, 3 HepB immunization series by 24 months of age. There are approximately 130 children in this cohort.

Input Activities

Upon completion of the initial CASA, follow-up by both the autodialer and mail will be done to alert families to the need to bring their children in for immunizations. Follow-up CASA audits will be done throughout the year to monitor objective progress. Anecdotal information will be gathered through Dodge County Human Services and Health Department immunization clinics regarding the number of 24 month olds who have received one varicella or whose parents report a history of chickenpox disease.

Objective Value: \$9,316

Objective: Primary Details

Objective Statement

By December 31, 2006, a strategic plan will be in place to implement community-wide interventions with the goal of improving the immunization rates in Dodge County and the city of Watertown utilizing a multi-year approach.

Deliverable Due Date: 01/31/2007

Contract Deliverable (Evidence)

A copy of the strategic plan by which this objective will be implemented utilizing a multi-year approach.

Programs Providing Funds for this Objective

Immunization: \$9,316

Agency Funds for this Objective:

Data Source for Measurement

CASA and Wisconsin Immunization Registry are the data sets that will be used to help establish the baseline data to identify the goals of the strategic plan.

Baseline for Measurement

New objective.

Context

In order for Dodge County, including residents of the city of Watertown, to work toward achieving the goals outlined in the Wisconsin State Health Plan, "Healthiest Wisconsin 2010," a strategic plan needs to be developed and implemented utilizing a multi-year approach.

Input Activities

Population assessments will be done to the best of our ability based on available data. Key partners in immunizing the residents of Dodge County and the city of Watertown will be identified and brought together to establish a coalition. The first task of the coalition will be the development of a strategic plan utilizing a multi-year approach. Additionally, the coalition will provide information regarding the Wisconsin Immunization Registry and its importance in improving the available data obtained through population assessments. The coalition will address tiered interventions and the use of reminder/recall focused on population-based immunization improvements.

Objective: Primary Details

Objective Statement

During the contract period, 85% of infants born in Door County who turn three months of age in 2006 will receive 1 DTaP, 1 Polio, 1 Hib and 1 HepB vaccine by four months of age.

Deliverable Due Date: 01/31/2007

Contract Deliverable (Evidence)

A report to summarize a statistically valid survey that provides: 1) the total number of children born in Door County who turned three months of age in 2006, 2) CASA or Wisconsin Immunization Registry generated documentation of the number of those children who received 1 DTaP, 1 Polio, 1 Hib and 1 HepB vaccine by four months of age, and 3) the number of those children noted as moved or going elsewhere and those marked as non-responders.

Programs Providing Funds for this Objective

Immunization: \$6,917

Agency Funds for this Objective:

Data Source for Measurement

Wisconsin Immunization Registry records.

Baseline for Measurement

As of July 2005, 90% of children served by the Door County Health Department Immunization Program who were 24-35 months of age as of December 31, 2004 had completed their primary immunizations by 35 months of age.

Context

The cohort of children to be analyzed for this objective will be those children born during the period October 1, 2005 through September 30, 2006. Children will be assessed for having at least 1 DTaP, 1 Polio, 1 Hib and 1 HepB vaccine by four months of age. Only children who have moved out of the agency's jurisdiction (MOGE) or have failed to respond to three reminder/recall attempts or their mail has been returned undeliverable may be removed from the cohort for analysis. The goal of this objective is to help identify patient and system level barriers that place children at risk of not completing their primary series of immunization on schedule. Access to primary and preventive health services is one of the priorities identified in Wisconsin's State Health Plan, Healthiest People 2010: A Partnership Plan to Improve the Health of the Public. Children who begin their community-based immunizations by three months of age are more likely to complete the primary series of 4 DTaP, 3 Polio, 1 MMR, 3 Hib, 3 HepB and 1 Varicella by 24 months of age. This objective also addresses the Healthy People 2010: 14-26 goal to "Increase the proportion of children who participate in fully operational population-based immunization registries" by identifying local gaps in Wisconsin Immunization Registry.

Input Activities

Current immunization and tracking activities will continue. The Wisconsin Immunization Registry will be utilized for tracking records.

Objective #: 1 of 1

Objective Value: \$13,695

Objective: Primary Details

Objective Statement

During the contract period, 85% of infants born in Douglas County who turn three months of age in 2006 will receive 1 DTap, 1 Polio, 1 Hib and 1 HepB vaccine by four months of age.

Deliverable Due Date: 01/31/2007

Contract Deliverable (Evidence)

A report to summarize a statistically valid survey that provides: 1) the total number of children born in Douglas County who turned three months of age in 2006, 2) CASA or Wisconsin Immunization Registry generated documentation of the number of those children who received 1 DTap, 1 Polio, 1 Hib and 1 HepB vaccine by four months of age, and 3) the number of those children noted as moved or going elsewhere and those marked as non-responders.

Programs Providing Funds for this Objective

Immunization: \$13,695

Agency Funds for this Objective:

Data Source for Measurement

Wisconsin Immunization Registry doesn't have Minnesota records. Minnesota Department of Vital Statistics Total Births for the Month reports, parent or clinic response data on immunizations.

Baseline for Measurement

None, due to all Douglas County births (except for home births) are in St. Louis County, Minnesota hospitals. St. Louis County birth data does not transmit to the Wisconsin Immunization Registry. According to Minnesota data, in 2004 there were 400 "Douglas County" births in St. Louis County, Minnesota.

Context

The cohort of children to be analyzed for this objective will be those children born during the period October 1, 2005 through September 30, 2006. Children will be assessed for having at least 1 DTap, 1 Polio, 1 Hib and 1 HepB vaccine by four months of age. Only children who have moved out of the agency's jurisdiction (MOGE) or have failed to respond to three reminder/recall attempts or their mail has been returned undeliverable may be removed from the cohort for analysis. The goal of this objective is to help identify patient and system level barriers that place children at risk of not completing their primary series of immunization on schedule. Access to primary and preventive health services is one of the priorities identified in Wisconsin's State Health Plan, Healthiest People 2010: A Partnership Plan to Improve the Health of the Public. Children who begin their community-based immunizations by three months of age are more likely to complete the primary series of 4 DTap, 3 Polio, 1 MMR, 3 Hib, 3 HepB and 1 Varicella by 24 months of age. This objective also addresses the Healthy People 2010: 14-26 goal to "Increase the proportion of children who participate in fully operational population-based immunization registries" by identifying local gaps in Wisconsin Immunization Registry.

Input Activities

This Local Health Department (LHD) has recently signed a Memorandum of Understanding with the Minnesota Department of Vital Statistics to access birth data for St. Louis County, Minnesota. Except for home deliveries, Douglas County births take place in Duluth, Minnesota (St. Louis County). This LHD has to purchase birth data from Minnesota on a monthly basis and also has to sort out Douglas County births from those in St. Louis County. Using this data, this LHD sends a congratulations card to all new parents and offers Public Health Nurse services. Response to these mailings has been minimal. Phone number data is not included in the Minnesota reports. For this 2006 objective, this LHD will mail a survey with a response request to all parents noted on the Minnesota report. The survey will request immunization information and/or offering the immunization service. The LHD will work to establish a reporting mechanism for Minnesota primary care and pediatric clinics to this LHD. The LHD will work with Division of Public Health Regional Office technical assistance to explore the means for using the Wisconsin Immunization Registry to store Minnesota birth data.

Objective #: 1 of 1

Contract Year: 2006
Objective Value: \$22,065

Objective: Primary Details

Objective Statement

By December 31, 2006, 58% of Eau Claire County children who will be 24-35 months of age as of December 31, 2006 will complete their primary immunizations by 35 months of age.

Deliverable Due Date: 01/31/2007

Contract Deliverable (Evidence)

A Wisconsin Immunization Registry CASA report to include documentation of the number of Eau Claire County children who were 24-35 months of age as of December 31, 2006, and the number of those children who completed their primary immunization series by 35 months of age.

Programs Providing Funds for this Objective

Immunization: \$22,065

Agency Funds for this Objective:

Data Source for Measurement

Wisconsin Immunization Registry CASA Summary Report of up-to-date immunizations by 35 months of age.

Baseline for Measurement

On January 1, 2005, there were 1,034 children in the cohort of children aged 24-35 months; 57% had completed their 4 DTaP, 3 polio, 1 MMR, 3 Hib, 3 HepB and 1 varicella primary immunization series by 35 months of age.

Context

Children will be assessed for their completion of the 4 DTaP, 3 polio, 1 MMR, 3 Hib, 3 HepB and 1 varicella immunization series by 35 months of age.

Input Activities

Activities will include outreach and tracking activities to families with children ages 18-35 months via written or telephone reminders. The agency will work with child care providers and others including representatives from childhood immunization provider clinics in the community to increase age-appropriate immunization levels.

Agency: Florence County Health Department
Objective #: 1 of 1

Contract Year: 2006
Objective Value: \$4,044

Objective: Primary Details

Objective Statement

By December 31, 2006, 80% of children residing in Florence County who turn 19 months of age during 2006 will have their 4th dose of DTaP.

Deliverable Due Date: 01/31/2007

Contract Deliverable (Evidence)

A report to summarize a statistically valid survey that provides: 1) the total number of children residing in Florence County who turned 19 months of age in 2006, 2) CASA or Wisconsin Immunization Registry generated documentation of the number of those children who have their 4th dose of DTaP, and 3) the number of those children noted as moved or going elsewhere and those marked as non-responders.

Programs Providing Funds for this Objective

Immunization: \$4,044

Agency Funds for this Objective:

Data Source for Measurement

Wisconsin Immunization Registry records.

Baseline for Measurement

A CASA summary report dated September 19, 2005, with a common review date of December 21, 2004 for children 12-35 months of age, revealed that 52.5% of children received DTaP #4 by 19 months of age.

Context

Children who will turn 19 months of age during the contract year 2006 will be assessed for receipt of the 4th dose of DTaP. Only children who have moved out of the agency's jurisdiction (MOGE) or have failed to respond to three reminder/recall attempts or their mail has been returned undeliverable may be removed from the cohort for analysis.

Input Activities

Immunization clinics will continue to be held in Florence and Aurora with special appointments made to accommodate working parents. Continue to send reminder recall notices to parents and caretakers of children needing immunizations, including an offer to remind those parents whose children are receiving them from other providers. Modify our reminders to occur according to the Wisconsin Immunization Registry (WIR) recommendations. Our manual system in the past was to call children back one year after the third DTaP rather than calculating the age of the child. Enter data into WIR. Agency secretary will monitor children immunized and entered into the Michigan Childhood Immunization Registry for timeliness of their immunizations. Meet with the local Florence Medical Center staff twice during the year to discuss any concerns and offer to assist with a CASA report.

Contract #: 13700
Program: Immunization

Agency: Fond du Lac County Health Department
Objective #: 1 of 1

Contract Year: 2006
Objective Value: \$21,255

Objective: Primary Details

Objective Statement

By December 31, 2006, 80% of children served by the Fond du Lac County WIC Program who will be 24-35 months of age as of December 31, 2006 will complete their primary immunizations by 35 months of age.

Deliverable Due Date: 01/31/2007

Contract Deliverable (Evidence)

WIC semi-annual immunization report or equivalent dated December 31, 2006 which demonstrates the percentage of WIC Program eligible children 20-35 months of age as of December 31, 2006 who completed their primary immunizations by 35 months of age.

Programs Providing Funds for this Objective

Immunization: \$21,255

Agency Funds for this Objective:

Data Source for Measurement

Wisconsin WIC Program Immunization Report or its equivalent.

Baseline for Measurement

Semi-annual WIC Immunization Report dated April 1, 2005 states 69.7% of children enrolled in the WIC Program completed their primary immunizations by 2 years of age.

Context

The goal for 2005 is for 85% of children who received their immunizations through the Health Department to complete their primary immunizations by 35 months of age. Primary immunizations means 4 DTap, 3 IPV, 3 or 4 Hib, 3 HepB, 1 MMR, 1 Varivax. Children enrolled in the WIC Program consistently have a lower completion rate. The Fond du Lac County WIC Program had 1,019 children under the age of 3 enrolled as of April 11, 2005.

Input Activities

WIC Program staff will assess a child's immunization status at each visit. For children whose immunization history records are not available from the parent, and with parental consent, Health Department staff will research the child's vaccine history and input/update their vaccination record into the Wisconsin Immunization Registry. For WIC Program children who are age appropriate for vaccine or behind schedule, Health Department Registered Nurses will be available to provide vaccine on-site at the Fond du Lac WIC Program site. The Health Department will utilize home visits if needed to provide childhood vaccination for high risk families.

Objective #: 1 of 1

Objective Value: \$6,353

Objective: Primary Details

Objective Statement

During the contract period, 87% of infants born in Forest County who turn three months of age in 2006 will receive 1 DTaP, 1 Polio, 1 Hib and 1 HepB vaccine by four months of age.

Deliverable Due Date: 01/31/2007

Contract Deliverable (Evidence)

A report to summarize a statistically valid survey that provides: 1) the total number of children born in Forest County who turned three months of age in 2006, 2) CASA or Wisconsin Immunization Registry generated documentation of the number of those children who received 1 DTaP, 1 Polio, 1 Hib and 1 HepB vaccine by four months of age, and 3) the number of those children noted as moved or going elsewhere and those marked as non-responders.

Programs Providing Funds for this Objective

Immunization: \$6,353

Agency Funds for this Objective:

Data Source for Measurement

Wisconsin Immunization Registry records and CASA reports.

Baseline for Measurement

CASA June 2005 Report indicated 100% and the 2004 report indicated 99% of children served by the Forest County Health Department were appropriately immunized at 12-35 months of age. County-wide Forest CASA assessment on August 26, 2005 indicated 85% of three-month old infants were immunized with one dose of DTaP, Polio, Hib and HepB.

Context

The cohort of children to be analyzed for this objective will be those children born during the period October 1, 2005 through September 30, 2006. Children will be assessed for having at least 1 DTaP, 1 Polio, 1 Hib and 1 HepB vaccine by four months of age. Only children who have moved out of the agency's jurisdiction (MOGE) or have failed to respond to three reminder/recall attempts or their mail has been returned undeliverable may be removed from the cohort for analysis. The goal of this objective is to help identify patient and system level barriers that place children at risk of not completing their primary series of immunization on schedule. Access to primary and preventive health services is one of the priorities identified in Wisconsin's State Health Plan, Healthiest People 2010: A Partnership Plan to Improve the Health of the Public. Children who begin their community-based immunizations by three months of age are more likely to complete the primary series of 4 DTaP, 3 Polio, 1 MMR, 3 Hib, 3 HepB and 1 Varicella by 24 months of age. This objective also addresses the Healthy People 2010: 14-26 goal to "Increase the proportion of children who participate in fully operational population-based immunization registries" by identifying local gaps in Wisconsin Immunization Registry.

Input Activities

Meeting at least 3-4 times with area health care providers and tribal centers to discuss and work towards objective goal. These meetings will include meeting with a clinic representative in a bordering county. Many parents choose to take their children to pediatricians in Oneida County. Other activities include advertising, promoting and conducting immunization clinics, printing and analyzing agency and community CASA reports, and meeting with clinics in the county to discuss and plan strategies. Staff will enter all immunizations into the Wisconsin Immunization Registry and reminder and recall will be done.

Agency: Franklin Health Department
Objective #: 1 of 3

Contract Year: 2006
Objective Value: \$2,000

Objective: Primary Details

Objective Statement

During the contract period, 75% of infants born in the city of Franklin who turn three months of age in 2006 will receive 1 DTaP, 1 Polio, 1 Hib and 1 HepB vaccine by four months of age.

Deliverable Due Date: 01/31/2007

Contract Deliverable (Evidence)

A report to summarize a statistically valid survey that provides: 1) the total number of children born in the city of Franklin who turned three months of age in 2006, 2) CASA or Wisconsin Immunization Registry generated documentation of the number of those children who received 1 DTaP, 1 Polio, 1 Hib and 1 HepB vaccine by four months of age, and 3) the number of those children noted as moved or going elsewhere and those marked as non-responders.

Programs Providing Funds for this Objective

Immunization: \$2,000

Agency Funds for this Objective:

Data Source for Measurement

Wisconsin Immunization Registry records.

Baseline for Measurement

This is a new initiative for the city of Franklin. A sample of Wisconsin Immunization Registry (WIR) records from June 2005 was reviewed. There were 35 birth records in WIR of which 22 (63%) reported completed immunizations consistent with this objective requirement.

Context

The cohort of children to be analyzed for this objective will be those children born during the period October 1, 2005 through September 30, 2006. Children will be assessed for having at least 1 DTaP, 1 Polio, 1 Hib and 1 HepB vaccine by four months of age. Only children who have moved out of the agency's jurisdiction (MOGE) or have failed to respond to three reminder/recall attempts or their mail has been returned undeliverable may be removed from the cohort for analysis. The goal of this objective is to help identify patient and system level barriers that place children at risk of not completing their primary series of immunization on schedule. Access to primary and preventive health services is one of the priorities identified in Wisconsin's State Health Plan, Healthiest People 2010: A Partnership Plan to Improve the Health of the Public. Children who begin their community-based immunizations by three months of age are more likely to complete the primary series of 4 DTaP, 3 Polio, 1 MMR, 3 Hib, 3 HepB and 1 Varicella by 24 months of age. This objective also addresses the Healthy People 2010: 14-26 goal to "Increase the proportion of children who participate in fully operational population-based immunization registries" by identifying local gaps in Wisconsin Immunization Registry.

Input Activities

Within the contract parameters, the Franklin Health Department staff will compare Wisconsin Immunization Registry (WIR) records with birth certificates on file. Infants without an up-to-date WIR record will be contacted by United States mail at least three times during the contract period to ascertain immunization dates for the infant. Where appropriate, Franklin Health Department immunization services will be offered to eligible families. As needed, parents will be educated as to the recommended immunization schedule for children. In addition, parents will be requested to contact the Franklin Health Department by telephone, in person, or by United States mail in order for the Franklin Health Department to update the infant's WIR record. Lastly, the Franklin Health Department will attempt to identify health care providers who do not participate in WIR and advocate on behalf of their patients as to the benefits of WIR.

Objective Statement

By December 31, 2006, 90% of licensed day care centers in the city of Franklin will submit the required Wisconsin Day Care Immunization Assessment tally sheet.

Deliverable Due Date: 01/31/2007

Contract Deliverable (Evidence)

A report to document the number of licensed day care centers in the city of Franklin and the number of those centers that submitted the required 2006 Wisconsin Immunization Assessment tally sheet.

Programs Providing Funds for this Objective

Immunization: \$1,200

Agency Funds for this Objective:

Data Source for Measurement

The city of Franklin maintains a listing of licensed day care centers within its jurisdiction. This listing is consistent with the Department of Health and Family Services Division of Children and Family Services day care listing for the city. The Franklin Health Department depends on the honesty of day care providers to accurately evaluate and complete the immunization tally sheet.

Baseline for Measurement

The baseline measurement for this objective has been 93%; however, the number of licensed day care centers has decreased during 2005 by at least two. The current number of family and group day cares in the city of Franklin is ten.

Context

Each year, the Franklin Health Department offers technical assistance and educational materials to local licensed day care centers about immunization requirements and the mandatory reporting of immunizations to the State and local public health department. Historically, the Franklin Health Department has also established systems whereby licensed day care centers can track enrollee's immunizations and update required vaccinations as needed. Together, we have attempted to ensure a fully vaccinated day care population within the city of Franklin.

Input Activities

Each licensed day care center will receive a copy of the Department of Health and Family Services Day Care Immunization Requirement booklet. The Franklin Health Department will offer technical assistance on the completion of the required tally sheet, evaluating immunization records, assessing the Wisconsin Immunization Registry for immunization records on the day care enrollees, and a reminder to send a copy of the tally sheet to the Franklin Health Department. In the event that a child is behind schedule for required immunizations, the Franklin Health Department will offer immunization services to eligible families or refer to the appropriate health care provider.

Contract #: 13767

Agency: Franklin Health Department

Contract Year: 2006

Program: Immunization

Objective #: 3 of 3

Objective Value: \$3,762

Objective: Primary Details

Objective Statement

By December 31, 2006, 90% of children served by the Franklin Health Department Immunization Program who will be 24 to 35 months of age by December 31, 2006 will complete their primary immunizations by 24 months of age.

Deliverable Due Date: 01/31/2007

Contract Deliverable (Evidence)

A CASA Summary Report to include documentation of the number of children served by the Franklin Health Department Immunization Program who were 24 to 35 months of age as of December 31, 2006, and the number of children who completed 4 DTaP, 3 Polio, 1 MMR, 3 Hib, 3 HepB and 1 Varicella vaccine by 24 months of age.

Programs Providing Funds for this Objective

Immunization: \$3,762

Agency Funds for this Objective:

Data Source for Measurement

Agency immunization records, CASA report, Wisconsin Immunization Registry reports.

Baseline for Measurement

Previous CASA reports by the Franklin Health Department. The Franklin Health Department has historically met or exceeded a 92% compliance rate.

Context

Children who are served by the Franklin Health Department Immunization Program will be assessed for the completion of 4 DTaP, 3 Polio, 1 MMR, 3 Hib, 3 HepB and 1 Varicella vaccine at 24 months of age. There are approximately 40 children in this cohort.

Input Activities

The Franklin Health Department will continue to maintain a full service childhood immunization program. Routine clinics are delivered on the first and third Wednesday of each month with extended hours of services to assist working parents and school-aged children's highly variable schedules. Franklin Health Department immunization clinic services will be promoted in the city newsletter, local media outlets, and through the school district. The Franklin Health Department will utilize the Wisconsin Immunization Registry to the fullest extent possible to provide quality immunization services for its clients.

Contract Year: 2006

Program: Immunization

Objective #: 1 of 1

Objective Value: \$12,433

Objective: Primary Details

Objective Statement

By December 31, 2006, 79% of children served by the Grant County Health Department Immunization Program who will be 24 months of age as of December 31, 2006 will complete their primary immunizations by 24 months of age.

Deliverable Due Date: 01/31/2007

Contract Deliverable (Evidence)

A report to document the number of children enrolled in the Grant County Health Department Immunization Program who were 24 months of age as of December 31, 2006, and the number of those children who completed their primary immunizations by 24 months of age.

Programs Providing Funds for this Objective

Immunization: \$12,433

Agency Funds for this Objective:

Data Source for Measurement

Agency records and CASA Summary Report to show rates for those 24 months of age.

Baseline for Measurement

In 2005, the rate was approximately 75%. On May 27, 2005, 582 records were listed on the Wisconsin Immunization Registry in the 0-24 month age group.

Context

Children will be assessed for their completion of the 4 DTaP, 3 polio, 1 MMR, 3 Hib, 3 HepB immunization series by 24 months of age.

Input Activities

Continue evening and daytime office immunization clinics. Continue to offer immunizations to children at WIC and HealthCheck clinics. Advertise immunization clinics in newspapers and radio stations. Send reminders as necessary. Public Health Nurses will collect some anecdotal information regarding the number of 24 month olds who have received one varicella or whose parents who report a history of chickenpox disease.

Objective Statement

By December 31, 2006, 88% of children served by the Green County Health Department Immunization Program who will be 24-35 months of age as of December 31, 2006 will complete their primary immunizations by 24 months of age.

Deliverable Due Date: 01/31/2007

Contract Deliverable (Evidence)

A report to include documentation of the number of children served by the Green County Health Department Immunization Program who were 24 months of age as of December 31, 2006, and the number of those children who completed their primary immunizations by 24 months of age. CASA report for 24 months.

Programs Providing Funds for this Objective

Immunization: \$6,000

Agency Funds for this Objective:

Data Source for Measurement

CASA Summary Report of the late-up-to-date immunizations of those children by 24 months of age. The estimate is that there are 60 children in this cohort of patients.

Baseline for Measurement

Two years ago there were 69% of children served by the Green County Health Department Immunization Program who were 24-35 months of age with completed primary immunizations by 35 months of age. This year we expect to be in the high 70% percentile for the same grouping.

Context

Children will be assessed for their completion of the 4 DTaP, 3 Polio, 1 MMR, 3 Hib, 3 HepB, 1 varicella immunization series by 24 months of age. The estimate is that there are 60 children in this cohort of patients.

Input Activities

Community outreach, usage of the Wisconsin Immunization Registry reminder system, promotion of immunizations at Head Start, daycares, and WIC. Holding immunization clinics at various places in Green County.

Contract #: 13703

Agency: Green County Health Department

Contract Year: 2006

Program: Immunization

Objective #: 2 of 2

Objective Value: \$3,548

Objective: Primary Details

Objective Statement

During the contract period, 88% of infants born in Green County who turn three months of age in 2006 will receive 1 DTaP, 1 Polio, 1 Hib and 1 HepB vaccine by four months of age.

Deliverable Due Date: 01/31/2007

Contract Deliverable (Evidence)

A report to summarize a statistically valid survey that provides: 1) the total number of children born in Green County who turned three months of age in 2006, 2) CASA or Wisconsin Immunization Registry generated documentation of the number of those children who received 1 DTaP, 1 Polio, 1 Hib and 1 HepB vaccine by four months of age, and 3) the number of those children noted as moved or going elsewhere and those marked as non-responders.

Programs Providing Funds for this Objective

Immunization: \$3,548

Agency Funds for this Objective:

Data Source for Measurement

Wisconsin Immunization Registry records.

Baseline for Measurement

New activity. The average number of births per year in Green County is approximately 300.

Context

The cohort of children to be analyzed for this objective will be those children born during the period October 1, 2005, through September 30, 2006. Children will be assessed for having at least 1 DTaP, 1 Polio, 1 Hib and 1 HepB vaccine by four months of age. Only children who have moved out of the agency's jurisdiction (MOGE) or have failed to respond to three reminder/recall attempts or their mail has been returned undeliverable may be removed from the cohort for analysis. The goal of this objective is to help identify patient and system level barriers that place children at risk of not completing their primary series of immunization on schedule. Access to primary and preventive health services is one of the priorities identified in Wisconsin's State Health Plan, Healthiest People 2010: A Partnership Plan to Improve the Health of the Public. Children who begin their community-based immunizations by three months of age are more likely to complete the primary series of 4 DTaP, 3 Polio, 1 MMR, 3 Hib, 3 HepB and 1 Varicella by 24 months of age. This objective also addresses the Healthy People 2010: 14-26 goal to "Increase the proportion of children who participate in fully operational population-based immunization registries" by identifying local gaps in Wisconsin Immunization Registry.

Input Activities

Will conduct recall and reminder notices generated through the Wisconsin Immunization Registry. Will vaccinate children at WIC and immunizations clinics scheduled by the department. Will do public advertising for Health Department clinics.

Objective Statement

During the contract period, 82% of infants born in Green Lake County who turn three months of age in 2006 will receive 1 DTaP, 1 Polio, 1 Hib and 1 HepB vaccine by four months of age.

Deliverable Due Date: 01/31/2007

Contract Deliverable (Evidence)

A report to summarize a statistically valid survey that provides: 1) the total number of children born in Green Lake County who turned three months of age in 2006, 2) CASA or Wisconsin Immunization Registry generated documentation of the number of those children who received 1 DTaP, 1 Polio, 1 Hib and 1 HepB vaccine by four months of age, and 3) the number of those children noted as moved or going elsewhere and those marked as non-responders.

Programs Providing Funds for this Objective

Immunization: \$6,604

Agency Funds for this Objective:

Data Source for Measurement

Wisconsin Immunization Registry records.

Baseline for Measurement

CASA report run from January 2005 to August 29, 2005 shows that 83.96% of children age three months have received 1 DTaP, 1 Polio, 1 Hib and 1 HepB. There were 106 children in this cohort.

Context

The cohort of children to be analyzed for this objective will be those children born during the period October 1, 2005 through September 30, 2006. Children will be assessed for having at least 1 DTaP, 1 Polio, 1 Hib and 1 HepB vaccine by four months of age. Only children who have moved out of the agency's jurisdiction (MOGE) or have failed to respond to three reminder/recall attempts or their mail has been returned undeliverable may be removed from the cohort for analysis. Contract #: 13777
Program: Immunization

Agency: Greendale Health Department
Objective #: 1 of 1

Contract Year: 2006
Objective Value: \$2,964

Objective: Primary Details

Objective Statement

During the contract period, 80% of infants born in the village of Greendale who turn three months of age in 2006 will receive 1 DTaP, 1 Polio, 1 Hib and 1 HepB vaccine by four months of age.

Deliverable Due Date: 01/31/2007

Contract Deliverable (Evidence)

A report to summarize a statistically valid survey that provides: 1) the total number of children born in the village of Greendale who turned three months of age in 2006, 2) CASA or Wisconsin Immunization Registry generated documentation of the number of those children who received 1 DTaP, 1 Polio, 1 Hib and 1 HepB vaccine by four months of age, and 3) the number of those children noted as moved or going elsewhere and those marked as non-responders.

Programs Providing Funds for this Objective

Immunization: \$2,964

Agency Funds for this Objective:

Data Source for Measurement

Wisconsin Immunization Registry records. SPHERE will be used to identify the birth cohort for the specified time period.

Baseline for Measurement

This is a new initiative so baseline data will be collected during the contract year. The birth cohort per year averages 110 for the past three years. Eighty percent of 110 would be 88 children that the Greendale Health Department would focus on to receive their immunizations.

Context

The cohort of children to be analyzed for this objective will be those children born during the period October 1, 2005 through September 30, 2006. Children will be assessed for having at least 1 DTaP, 1 Polio, 1 Hib and 1 HepB vaccine by four months of age. Only children who have moved out of the agency's jurisdiction (MOGE) or have failed to respond to three reminder/recall attempts or their mail has been returned undeliverable may be removed from the cohort for analysis. The goal of this objective is to help identify patient and system level barriers that place children at risk of not completing their primary series of immunization on schedule. Access to primary and preventive health services is one of the priorities identified in Wisconsin's State Health Plan, Healthiest People 2010: A Partnership Plan to Improve the Health of the Public. Children who begin their community-based immunizations by three months of age are more likely to complete the primary series of 4 DTaP, 3 Polio, 1 MMR, 3 Hib, 3 HepB and 1 Varicella by 24 months of age. This objective also addresses the Healthy People 2010: 14-26 goal to "Increase the proportion of children who participate in fully operational population-based immunization registries" by identifying local gaps in Wisconsin Immunization Registry.

Input Activities

Demographic information will be kept for each child born between October 1, 2005 to September 30, 2006 through the use of SPHERE birth reports. Public Health Nurses will discuss the immunization schedule at each newborn visit. Each newborn packet will include the childhood immunization schedule and an immunization record for documentation of vaccines. Families will be contacted by letter and phone over the contract period to assure that immunizations are being given to each child either through the Greendale Health Department Well Baby Clinic or a private provider. All immunization dates will be entered into the Wisconsin Immunization Registry (WIR) if seen at the Greendale Health Department or if the private provider does not enter immunization dates into WIR. WIR or CASA will be utilized to determine the number of children receiving specified immunizations by four months of age.

WIR and RPMS reports, chart reviews, and CASA report.

Baseline for Measurement

The immunization level for Ho-Chunk Tribal Health was 90% for children 12-36 months of age on January 1, 2004.

Context

Improve health status of Native American Children by providing CDC recommended immunizations according to schedule. Fully immunized means: 4 DTaP, 3 polio, 1 MMR, 3 Hib, 3 HepB.

Input Activities

Provide accessible immunization clinics such as after work clinics. Education to parents during WIC clinics. Send out letters reminding parents of recommended immunizations. Print immunization schedule in the tribal newspaper to provide education to tribal members.

Contract #: 13705
Program: Immunization

Agency: Iowa County Health Department
Objective #: 1 of 1

Contract Year: 2006
Objective Value: \$7,785

Objective: Primary Details

Objective Statement

By December 31, 2006, 85% of children served by the Iowa County Health Department Immunization Program who will be 12-35 months of age as of January 1, 2006 will complete their primary immunizations by 24 months of age.

Deliverable Due Date: 01/31/2007

Contract Deliverable (Evidence)

A report to include documentation of the number of children served by the Iowa County Health Department Immunization Program who were 12-35 months of age as of January 1, 2006, and the number of those children with age appropriate immunizations. A report from CASA will be sent to the Division of Public Health Southern Regional Office. This report will document that the following age appropriate immunizations were given: 4 DTaP, 3 Polio, 3 Hib, 1 MMR, 3 HepB. Varicella immunization will also be monitored with this contract.

Programs Providing Funds for this Objective

Immunization: \$7,785

Agency Funds for this Objective:

Data Source for Measurement

Data is obtained from a CASA report from the Wisconsin Immunization Registry.

Baseline for Measurement

A report from CASA dated September 16, 2005 indicates that 81% of children in the 12-35 month age range were properly immunized.

Context

The use of immunizations is the best prevention of childhood diseases. Iowa County has experienced some Pertussis outbreaks in the past years and it is important to emphasize the need for age-appropriate vaccines to keep Pertussis from spreading to the 12-35 month old children.

Input Activities

A CASA report will be done on October 1, 2005 to look at clients who will be needing immunizations. Postcards will be sent out early in 2006 for reminders to these clients. Information on immunizations will also be put into the local newspapers regarding the importance of age-appropriate immunizations. Refrigerator magnets from Kiwanis International that have the immunization schedule on them will also be sent out to families. Immunization clinics are held at least two times per month in the county and walk-ins are accepted anytime if staff is available.

Contract #: 13706
Program: Immunization

Agency: Iron County Health Department
Objective #: 1 of 1

Contract Year: 2006
Objective Value: \$5,837

Objective: Primary Details

Objective Statement

During the contract period, 85% of infants born in Iron County who turn three months of age in 2006 will receive 1 DTaP, 1 Polio, 1 Hib and 1 HepB vaccine by four months of age.

Deliverable Due Date: 01/31/2007

Contract Deliverable (Evidence)

A report to summarize a statistically valid survey that provides: 1) the total number of children born in Iron County who turned three months of age in 2006, 2) CASA or Wisconsin Immunization Registry generated documentation of the number of those children who received 1 DTaP, 1 Polio, 1 Hib and 1 HepB vaccine by four months of age, and 3) the number of those children noted as moved or going elsewhere and those marked as non-responders.

Programs Providing Funds for this Objective

Immunization: \$5,837

Agency Funds for this Objective:

Data Source for Measurement

Wisconsin Immunization Registry records.

Baseline for Measurement

2004 births equal 25 and Michigan births to our Iron County, Wisconsin residents equal 14 for a total of 39 births in 2004.

Context

The cohort of children to be analyzed for this objective will be those children born during the period October 1, 2005, through September 30, 2006. Children will be assessed for having at least 1 DTaP, 1 Polio, 1 Hib and 1 HepB vaccine by four months of age. Only children who have moved out of the agency's jurisdiction (MOGE) or have failed to respond to three reminder/recall attempts or their mail has been returned undeliverable may be removed from the cohort for analysis. The goal of this objective is to help identify patient and system level barriers that place children at risk of not completing their primary series of immunization on schedule. Access to primary and preventive health services is one of the priorities identified in Wisconsin's State Health Plan, Healthiest People 2010: A Partnership Plan to Improve the Health of the Public. Children who begin their community-based immunizations by three months of age are more likely to complete the primary series of 4 DTaP, 3 Polio, 1 MMR, 3 Hib, 3 HepB and 1 Varicella by 24 months of age. This objective also addresses the Healthy People 2010: 14-26 goal to "Increase the proportion of children who participate in fully operational population-based immunization registries" by identifying local gaps in Wisconsin Immunization Registry.

Input Activities

Immunization activities. Outreach through Prenatal Care Coordination, WIC, and newborn visitation program.

Contract #: 13707

Agency: Jackson County Health & Human Services Department

Contract Year: 2006

Program: Immunization

Objective #: 1 of 1

Objective Value: \$6,467

Objective: Primary Details

Objective Statement

By December 31, 2006, 60% of children residing in Jackson County who turn 19 months of age during 2006 will have their 4th dose of DTaP.

Deliverable Due Date: 01/31/2007

Contract Deliverable (Evidence)

A report to summarize a statistically valid survey that provides: 1) the total number of children residing in Jackson County who turned 19 months of age in 2006, 2) CASA or Wisconsin Immunization Registry generated documentation of the number of those children who have their 4th dose of DTaP, and 3) the number of those children noted as moved or going elsewhere and those marked as non-responders.

Programs Providing Funds for this Objective

Immunization: \$6,467

Agency Funds for this Objective:

Data Source for Measurement

Wisconsin Immunization Registry records.

Baseline for Measurement

CASA Summary Report run date of September 15, 2005 reports that only 50.80% of children 24-35 months of age at 24 months are up-to-date having received 4 DTaP. There were 187 records in this cohort.

Context

Children who will turn 19 months of age during the contract year 2006 will be assessed for receipt of the 4th dose of DTaP. Only children who have moved out of the agency's jurisdiction (MOGE) or have failed to respond to three reminder/recall attempts or their mail has been returned undeliverable may be removed from the cohort for analysis.

Input Activities

A large percent of Jackson County children receive immunization services from either a local private (independent) clinic or the Ho-Chunk Health Care Center. The private clinic has not participated in the Wisconsin Immunization Registry (WIR) program and has depended on the Health Department to enter vaccination histories for their patients into WIR. Likewise, there have been barriers for WIR entry with the Ho-Chunk Health Care Center: staff retention issues, duplicative systems, etc. Due to financial constraints, the Health Department is uncertain of its ability to continue providing this support in 2006. It will require significant time and effort on the part of the Health Department to facilitate WIR entry and thus accurate statistics for immunization status in the county. Because the Health Department has reason to believe that the current CASA Summary Report statistics do not accurately portray actual immunization rates, a true baseline is uncertain and 2006 will be a transitional year.

Contract #: 13708
Program: Immunization

Agency: Jefferson County Health Department
Objective #: 1 of 1

Contract Year: 2006
Objective Value: \$15,461

Objective: Primary Details

Objective Statement

By December 31, 2006, 88% of children served by the Jefferson County Health Department Immunization Program who will be 24 to 35 months of age as of December 31, 2006 will complete their primary immunizations by 24 months of age.

Deliverable Due Date: 01/31/2007

Contract Deliverable (Evidence)

A report to include documentation of the number of children served by the Jefferson County Health Department Immunization Program who were 24 to 35 months of age as of December 31, 2006, and the number of those children who completed their primary immunizations by 24 months of age.

Programs Providing Funds for this Objective

Immunization: \$15,461

Agency Funds for this Objective:

Data Source for Measurement

Agency records and CASA Summary Report of up-to-date immunizations by 24 months of age.

Baseline for Measurement

2004 CASA showed that 82.4% of 360 children ages 12 to 35 months of age served by Jefferson County Health Department had completed the 4 DTaP, 3 Polio, 1 MMR, 3 Hib, 3 HepB and 1 varicella vaccine immunization series. February 2005 indicated that 88% of 464 children 12 to 35 months of age served by the Jefferson County Health Department had completed the 4 DTaP, 3 Polio, 1 MMR, 3 Hib, 3 HepB and 1 varicella vaccine immunization series by age two and 92% completed 4 DTaP, 3 Polio, 1 MMR, 3 Hib, 3 HepB by age two.

Context

Children will be assessed for their completion of the 4 DTaP, 3 Polio, 1 MMR, 3 Hib, 3 HepB and 1 varicella vaccine immunization series by 24 months of age. The estimate is there are 300 children in this cohort of patients.

Input Activities

The Jefferson County Health Department will do targeted outreach to children who are in need of immunizations. Immunizations will also be provided at a daily office clinic, at all Well Child Clinics held throughout Jefferson County, at WIC clinics and at late hours clinics as needed. The Health Department will also conduct periodic reminder and recall. Periodic reminder and recall is done in the following ways. Children who are in need of vaccinations and not actively receiving immunization or well child clinic services from the Jefferson County Health Department are contacted three times. Three letters are sent and if returned as moved, they are inactivated. Children receiving immunizations or well child clinic services are given a postcard to fill out at the clinic visit which is then mailed to them before the next immunization is due. The date of the next vaccine due is also written on their immunization card. If they don't show, it is referred to the area Public Health Nurse for follow-up. We will also assist the Latino population by providing all information in Spanish and having an interpreter available at clinics.

Program: Immunization

Agency: Kenosha County Division of Health
Objective #: 1 of 1

Contract Year: 2006
Objective Value: \$41,749

Objective: Primary Details

Objective Statement

By December 31, 2006, 78% of children served by the Kenosha County Division of Health Immunization Program who will be 24-35 months of age on December 31, 2006 will complete their primary immunizations by 24 months of age.

Deliverable Due Date: 01/31/2007

Contract Deliverable (Evidence)

A report to include documentation of the number of children served by the Kenosha County Division of Health Immunization Program who were 24-35 months of age as of December 31, 2006, and the number of those children who completed their primary immunizations by 24 months of age.

Programs Providing Funds for this Objective

Immunization: \$41,749

Agency Funds for this Objective:

Data Source for Measurement

Agency records and CASA Summary Report of up-to-date immunizations by 24 months of age.

Baseline for Measurement

For 2004, the final measuring of 688 children who were 24-35 months of age, 74% had completed the 4 DTaP, 3 polio, 1 MMR, 3 Hib, 3 Hepatitis B, 1 varicella immunization series by 24 months of age. For mid-year 2005, the point-in-time Wisconsin Immunization Registry to CASA measured 76% of the 415 children who were 24 months old in the cohort of 12-35 month old children who completed 4:3:1:3:3:1.

Context

Children will be assessed for their completion of the 4 DTaP, 3 polio, 1 MMR, 3 Hib, 3 Hepatitis B, 1 varicella immunization series by 24 months of age.

Input Activities

The Kenosha Immunization Coalition (KIC) will increase their visibility and impact on raising immunization rates in Kenosha County through a varicella vaccine campaign to promote on-schedule use of varicella vaccine (routinely given at 12-15 months) to providers and parents. Targeted outreach will be to parents of children to promote varicella vaccination on schedule. Additional activities to ensure success of this objective include: contact parents of infants and children who have not completed their primary series, reminder/recall, follow-up interventions to complete series, tracking, and work with two large pediatric providers not currently enrolled in the Wisconsin Immunization Registry (WIR) to promote and enroll into WIR or negotiate interim solution to entering records in WIR by Kenosha County Health Department. Immunization services are provided to both city and county residents through our main office Nurse of the Day (NOD) Clinic, Monday through Friday, 8:00 a.m. to 4:00 p.m. and an evening clinic once per month, along with our satellite office NOD Clinic at the Kenosha County Center (Hwy. 45 and 50) with two morning clinics each week, 8:30 a.m. to 11:30 a.m. and a monthly clinic from 3:00 to 5:00 p.m. Interpreter services are available to non-English speaking families with our Community Health Outreach Worker or the Language Line. Head Start and Early Head Start contract nursing services from Kenosha County Health and immunization services are a coordinated activity as appropriate. Women, Infants and Children (WIC) Program is a Kenosha County Health affiliate and the WIC participants are referred to the Health Department immunization services as appropriate. Families that have transportation issues or other extenuating circumstances are provided immunization services in their home by a Public Health Nurse.

Contract #: 13712
Program: Immunization

Agency: La Crosse County Health Department
Objective #: 1 of 1

Contract Year: 2006
Objective Value: \$24,685

Objective: Primary Details

Objective Statement

During the contract period, 85% of infants born in La Crosse County who turn three months of age in 2006 will receive 1 DTaP, 1 Polio, 1 Hib and 1 HepB vaccine by four months of age.

Deliverable Due Date: 01/31/2007

Contract Deliverable (Evidence)

A report to summarize a statistically valid survey that provides: 1) the total number of children born in La Crosse County who turned three months of age in 2006, 2) CASA or Wisconsin Immunization Registry generated documentation of the number of those children who received 1 DTaP, 1 Polio, 1 Hib and 1 HepB vaccine by four months of age, and 3) the number of those children noted as moved or going elsewhere and those marked as non-responders.

Programs Providing Funds for this Objective

Immunization: \$24,685

Agency Funds for this Objective:

Data Source for Measurement

Wisconsin Immunization Registry records.

Baseline for Measurement

The birth cohort is 2,400 for La Crosse County. We know that 1,292 of these infants were born and reside in La Crosse County according to a report dated July 2003. We will evaluate a sampling of the 1,292 clients who reside in La Crosse County. Intensified outreach will be required to educate the Hmong refugee population on immunizations and requirements. The baseline for this objective is 81% from the CASA Report.

Context

The cohort of children to be analyzed for this objective will be those children born during the period October 1, 2005 through September 30, 2006. Children will be assessed for having at least 1 DTaP, 1 Polio, 1 Hib and 1 HepB vaccine by four months of age. Only children who have moved out of the agency's jurisdiction (MOGE) or have failed to respond to three reminder/recall attempts or their mail has been returned undeliverable may be removed from the cohort for analysis. The goal of this objective is to help identify patient and system level barriers that place children at risk of not completing their primary series of immunization on schedule. Access to primary and preventive health services is one of the priorities identified in Wisconsin's State Health Plan, Healthiest People 2010: A Partnership Plan to Improve the Health of the Public. Children who begin their community-based immunizations by three months of age are more likely to complete the primary series of 4 DTaP, 3 Polio, 1 MMR, 3 Hib, 3 HepB and 1 Varicella by 24 months of age. This objective also addresses the Healthy People 2010: 14-26 goal to "Increase the proportion of children who participate in fully operational population-based immunization registries" by identifying local gaps in Wisconsin Immunization Registry.

Input Activities

A reminder letter will be sent to all parents or guardians of children who are two months of age and have been identified in the sample of children born in and residing in La Crosse County. A second reminder letter will be sent to the parent or guardian when the child is three months of age and is now considered behind on immunizations according to Wisconsin Immunization Registry records. A follow-up phone call will be attempted to educate the client on the importance of immunization and assess any barrier the client may have. If transportation is a barrier, a Registered Nurse will offer to go to the home and administer any vaccines that are necessary to get the child brought up-to-date on their immunizations. A Hmong interpreter will be available for all Hmong client contacts where there is a noted language barrier. Extensive education will need to be done with Hmong refugee clients to ensure they are fully aware of the recommendations for vaccination of their children and the benefits associated with vaccination. Education will also need to be done with this target group on the benefits of multiple vaccinations during the visit if required. A reminder letter will be sent to all parents or guardians of children who are two months of age and are not in the sampling group. A second reminder letter will be sent to the parent or guardian when the child is three months of age and is now considered behind on immunizations according to the Wisconsin Immunization Registry records. All reminder letters will include information on where clients can access immunization services.

Contract #: 13607

Agency: Lac Courte Oreilles Tribe

Contract Year: 2006

Program: Immunization

Objective #: 1 of 1

Objective Value: \$5,283

Objective: Primary Details

Objective Statement

By September 30, 2006, 70% of children served by the Lac Courte Health Center who will be 24-35 months of age as of September 30, 2005 will complete their primary immunizations by 35 months of age.

Deliverable Due Date: 10/31/2006

Contract Deliverable (Evidence)

A report to include documentation of the number of children served by the Lac Courte Oreilles Health Center who were 24-35 months of age as of September 30, 2005, and the number of those children who completed their primary immunizations by 35 months of age.

Programs Providing Funds for this Objective

Immunization: \$5,283

Agency Funds for this Objective:

Data Source for Measurement

Agency records and Wisconsin Immunization Registry.

Baseline for Measurement

The mid-year report for June, 2005 was 69% for children 3-27 months and 78% for children 24-36 months.

Context

Children will be assessed for their completion of the 4 DTaP, 2 polio, 1 MMR, 3 Hib, 3 HepB, 1 varicella immunization series by 35 months of age. The estimate is there are 79 children in this cohort of patients. In 2006, the coverage levels will include varicella vaccine in the assessment reports.

Input Activities

Track children, provide immunizations, follow-up on children who are behind on immunizations, coordinate with Sawyer County Health Department.

Agency: Lac Du Flambeau Tribe
Objective #: 1 of 1

Contract Year: 2006
Objective Value: \$4,263

Objective: Primary Details

Objective Statement

By September 30, 2006, 86% of Native American children 12-35 months served by the Peter Christensen Health Center will have received age-appropriate immunizations.

Deliverable Due Date: 10/31/2006

Contract Deliverable (Evidence)

A CASA report to include the documentation of the number of children served by the Peter Christensen Health Center, who were 12-35 months of age as of January 1, 2006, and the number of those children with age-appropriate immunizations.

Programs Providing Funds for this Objective

Immunization: \$4,263

Agency Funds for this Objective:

Data Source for Measurement

Community Health Service Department tracking system records , CASA, Resource Patient Management System (RPMS), and the Wisconsin Immunization Registry report.

Baseline for Measurement

At the 2005 mid-year review, children were 77% up-to-date with 4 DTap, 3 Polio, 1 MMR, 3 HIB, 3 Hep B immunization series by 24 months of age.

Context

Children ages 12-35 months will be assessed for their completion of the 4 DTap, 3 Polio, 1 MMR, 3 HIB, 3 Hep B, and varicella immunization series by 24 months of age. The estimate is there are 150 children in this cohort of patients.

Input Activities

The Peter Christensen Health Center will maintain a reminder and recall tracking system using Resource Patient Management System (RPMS) to notify patients when immunizations are due. Charts at the Peter Christensen Health Center will be flagged when immunizations are due or past due. The Wisconsin Immunization Registry system will continue to be used for immunization recording and back-up immunization records.

Contract #: 13713
Program: Immunization

Agency: Lafayette County Health Department
Objective #: 1 of 1

Contract Year: 2006
Objective Value: \$6,326

Objective: Primary Details

Objective Statement

By December 31, 2006, 84% of children served by the Lafayette County Health Department Immunization Program who will be 24-35 months of age on December 31, 2006 will complete their primary immunizations by 24 months of age.

Deliverable Due Date: 01/31/2007

Contract Deliverable (Evidence)

A report to include documentation of the number of children served by the Lafayette County Health Department Immunization Program who were 24-35 months of age as of December 31, 2006, and the number of children who completed their primary immunizations by 24 months of age.

Programs Providing Funds for this Objective

Immunization: \$6,326

Agency Funds for this Objective:

Data Source for Measurement

Agency records and CASA Summary Report of up-to-date children by 24 months of age.

Baseline for Measurement

At the mid-year review in 2005, the county ran a CASA Summary Report on July 5, 2005. The report indicated that 71.05% of 24-35 month olds were up-to-date. Another CASA Summary Report ran on August 12, 2005 showed a rate of 81.4% for the same group of 24-35 month olds.

Context

The number of children served by this agency in this age cohort is estimated to be 80-95. The agency is the only provider of immunizations in the county. Those who are not served by the agency will receive services from providers outside the county. These providers do not use the Wisconsin Immunization Registry.

Input Activities

Children will be assessed for their completion of the 4th DTaP, 3 polio, 1 MMR, 3 Hib, 3 HepB immunization series by 24 months of age. The assessment does not include the varicella vaccine. The agency will work towards improving the varicella rates as well and may be potentially ready to look at a immunization rate including varicella next year.

Contract #: 13714

Agency: Langlade County Health Department

Contract Year: 2006

Program: Immunization

Objective #: 1 of 2

Objective Value: \$3,000

Objective: Primary Details

Objective Statement

By December 31, 2006, 85% of children residing in Langlade County who turn 19 months of age during 2006 will have their 4th dose of DTaP.

Deliverable Due Date: 01/31/2007

Contract Deliverable (Evidence)

A report to summarize a statistically valid survey that provides: 1) the total number of children residing in Langlade County who turned 19 months of age in 2006, 2) CASA or Wisconsin Immunization Registry generated documentation of the number of those children who have their 4th dose of DTaP, and 3) the number of those children noted as moved or going elsewhere and those marked as non-responders.

Programs Providing Funds for this Objective

Immunization: \$3,000

Agency Funds for this Objective:

Data Source for Measurement

Wisconsin Immunization Registry records.

Baseline for Measurement

The CASA report as of August 19, 2005, 63.89% of children will be due for DTaP on or before December 31, 2006. A CASA extract from the Wisconsin Immunization Registry, using September 2, 2005 for the common review date with the assessment range of 12 to 24 months of age, shows a cohort of 242 children for whom the coverage rate at the 4th dose of DTaP for children 19 months of age was 81%.

Context

Children who will turn 19 months of age during the contract year 2006 will be assessed for receipt of the 4th dose of DTaP. Only children who have moved out of the agency's jurisdiction (MOGE) or have failed to respond to three reminder/recall attempts or their mail has been returned undeliverable may be removed from the cohort for analysis.

Input Activities

Reminder recalls, follow-up letters, reminder telephones.

Contract #: 13715
Program: Immunization

Agency: Lincoln County Health Department
Objective #: 1 of 1

Contract Year: 2006
Objective Value: \$7,252

Objective: Primary Details

Objective Statement

By December 31, 2006, 80% of children residing in Lincoln County who turn 19 months of age during 2006 will have their 4th dose of DTaP.

Deliverable Due Date: 01/31/2007

Contract Deliverable (Evidence)

A report to summarize a statistically valid survey that provides: 1) the number of children residing in Lincoln County who turned 19 months of age in 2006 as recorded in RECIN. 2) RECIN generated documentation of the number of those children who have their 4th dose of DTaP, and 3) the number of those children noted as moved or going elsewhere and those marked as non responders.

Programs Providing Funds for this Objective

Immunization: \$7,252

Agency Funds for this Objective:

Data Source for Measurement

RECIN report.

Baseline for Measurement

This is a new objective. A RECIN report as of September 29, 2005 indicates 452 records with 73% having had the 4th DTaP.

Context

Children who will turn 19 months of age during the contract year 2006 will be assessed for receipt of the 4th dose of DTaP. Only children who have moved out of the agency's jurisdiction or have failed to respond to three reminder/recall attempts, or their mail has been returned undeliverable may be removed from the cohort for analysis. RECIN will be used to generate the report because approximately 2/3 of the infants are on this network as to 1/3 on the Wisconsin Immunization Registry.

Input Activities

The Health Department will provide extended clinic and appointment hours, develop a recall system, utilize the system, and collaborate with private providers.

Objective: Primary Details

Objective Statement

By December 31, 2006, 250 Hispanic clients will receive one immunization provided by the Madison Department of Public Health.

Deliverable Due Date: 01/31/2007

Contract Deliverable (Evidence)

A report to include documentation of the number and ages of Hispanic clients who received one immunization from the agency.

Programs Providing Funds for this Objective

Immunization: \$20,000

Agency Funds for this Objective:

Data Source for Measurement

Agency records.

Baseline for Measurement

This is a new objective. There is no baseline.

Context

The agency holds approximately 17 immunization clinics per month and provides interpretation services to all who need it. In 2004, 32% (521 of 1,610) of the agency's immunization clinic clients were Hispanic. The agency encourages staff to take Spanish language classes by paying for the classes or allowing them to use work time for the classes. It is expected that a report from the Wisconsin Immunization Registry system will be available to count the number and ages of the Hispanic clients served. In 2004, the agency provided Spanish language services at 55 immunization clinics.

Input Activities

The agency will provide Spanish language interpretation services at 55 clinics, advertise its free immunization services in Spanish language publications and enter immunization information in the Wisconsin Immunization Registry.

Objective Statement

By December 31, 2006, 93% of children served by the Madison Department of Public Health Immunization Program who will be 24-35 months of age on December 31, 2006 will complete their primary immunizations by 24 months of age.

Deliverable Due Date: 01/31/2007

Contract Deliverable (Evidence)

A report to include documentation of the number of children served by the Madison Department of Public Health's Immunization Program who were 24-35 months of age as of December 31, 2006, and the number of those children who had received 4 DTaP, 3 polio, 1 MMR, 3 Hib, 3 HepB, and 1 varicella by 24 months of age.

Programs Providing Funds for this Objective

Immunization: \$11,000

Agency Funds for this Objective:

Data Source for Measurement

CASA report.

Baseline for Measurement

On June 30, 2005, 91.67% of 120 children in the agency's CASA cohort were up-to-date at age 24 months of age.

Context

The agency estimates that there are about 120 children in the 24-35 months of age cohort. They serve many families who have recently arrived in the United States, are highly mobile and have difficulty obtaining immunization services elsewhere. Many families come to clinic with incomplete or no immunization records.

Input Activities

The agency will hold about 17 free, walk-in immunization clinics each month. These clinics will be held at 2 agency locations, various community sites, during the day and evening. Interpretation services will be available at each clinic. To facilitate immunization for children enrolled in WIC, several immunization clinics will be held at the same time and location as WIC clinics. The agency will use an automatic telephone dialing system (Teletask) and postcards to remind families that their children are due for immunizations. A CASA data diskette will be sent to the State Regional Office Immunization Program upon the completion of the assessment.

Objective: Primary Details

Objective Statement

During the contract period, 85% of infants born to city of Madison residents who turn three months of age in 2006 will receive 1 DTaP, 1 Polio, 1 Hib, and 1 HepB vaccine by four months of age.

Deliverable Due Date: 01/31/2007

Contract Deliverable (Evidence)

A report to summarize a statistically valid survey that provides: 1) the total number of children born to city of Madison residents who turned 3 months of age in 2006, 2) CASA or Wisconsin Immunization Registry generated documentation of the number of those children who received 1 DTaP, 1 Polio, 1 Hib, and 1 HepB vaccine by 4 months of age, and 3) the number of those children noted as moved or going elsewhere and those marked as non-responders.

Programs Providing Funds for this Objective

Immunization: \$15,264

Agency Funds for this Objective:

Data Source for Measurement

Wisconsin Immunization Registry records.

Baseline for Measurement

This is the first time we will be assessing this cohort. No baseline.

Context

The cohort of children to be analyzed for this objective will be those children born during the period October 1, 2005, through September 30, 2006. Children will be assessed for having at least 1 DTaP, 1 Polio, 1 Hib and 1 HepB vaccine by four months of age. Only children who have moved out of the agency's jurisdiction (MOGE) or have failed to respond to three reminder/recall attempts or their mail has been returned undeliverable may be removed from the cohort for analysis. The goal of this objective is to help identify patient and system level barriers that place children at risk of not completing their primary series of immunization on schedule. Access to primary and preventive health services is one of the priorities identified in Wisconsin's State Health Plan, Healthiest People 2010: A Partnership Plan to Improve the Health of the Public. Children who begin their community-based immunizations by three months of age are more likely to complete the primary series of 4 DTaP, 3 Polio, 1 MMR, 3 Hib, 3 HepB and 1 Varicella by 24 months of age. This objective also addresses the Healthy People 2010: 14-26 goal to "Increase the proportion of children who participate in fully operational population-based immunization registries" by identifying local gaps in Wisconsin Immunization Registry. Approximately 3,000 infants are born to city of Madison residents each year. About 1,000 of these infants are identified as being at risk for not receiving immunizations. Over half of these infants receive immunizations from private medical providers. An ad hoc Wisconsin Immunization (WIR) report is being developed by the state. A major health care provider does not use the WIR system.

Input Activities

The agency will send immunization reminder postcards to parents of 2 month old infants identified as being at high risk for not receiving immunizations. The agency will support the Dane County Immunization Coalition's efforts to encourage private health care systems to improve the immunization rates of their clients. The agency will distribute regular updates on immunization topics and schedules through a newsletter to all immunization providers in Dane County. The agency will encourage private health care providers to begin to use the Wisconsin Immunization Registry (WIR) by providing technical assistance to them. The agency will also provide technical assistance to encourage the use of the WIR reminder/recall process. The agency will use Spanish and English media to promote immunizations for 2 month old infants.

By December 31, 2006, 90% of infants who turn 3 months of age during the contract year, were born to women who participated in a Madison Department of Public Health's "Healthy Mom, Healthy Baby" program and whose records were closed by a Public Health Nurse before December 31, 2006, will receive 1 DTaP, 1 polio, 1 Hib, and 1 HepB vaccine by 3 months of age.

Deliverable Due Date: 01/31/2007

Contract Deliverable (Evidence)

A report showing the number infants who turned 3 months of age during the contract year, were born to women who participated in a Madison Department of Public Health's "Healthy Mom, Healthy Baby" program, whose records were closed by a Public Health Nurse before December 31, 2006 and the number and percent of infants who had received 1 DTaP, 1 polio, 1 Hib, 1 HepB vaccine by 3 months of age.

Programs Providing Funds for this Objective

Immunization: \$5,000

Agency Funds for this Objective:

Data Source for Measurement

Agency records.

Baseline for Measurement

This is a new objective. There is no baseline.

Context

The agency has redesigned its perinatal home visitation program over the past few years. The program, "Healthy Mom, Healthy Baby," has 9 priority areas including "safe and nurturing infant care." One of the outcome measures is whether or not immunizations are up-to-date by 3 months of age. In previous years, it was found that 65.3% of infants were up-to-date by 3 months. By November 2005, the agency had served 149 pregnant women in the "Healthy Mom, Health Baby" program.

Input Activities

The agency will prepare materials to encourage pregnant and postpartum women to start their infant's immunizations on time, provide education to the Public Health Nurses about the importance of starting immunizations on time and determine which program factors are associated with the infant being up-to-date for their immunizations. New parents will be referred to their medical provider or the agency's free, walk-in immunization clinics.

Objective #: 1 of 1

Contract Year: 2006
Objective Value: \$19,674

Objective: Primary Details

Objective Statement

By December 31, 2006, 80% of children residing in Manitowoc County who turn 19 months of age during 2006 will have their 4th dose of DTaP.

Deliverable Due Date: 01/31/2007

Contract Deliverable (Evidence)

A report to summarize a statistically valid survey that provides: 1) the total number of children residing in Manitowoc County who turned 19 months of age in 2006, 2) CASA or Wisconsin Immunization Registry generated documentation of the number of those children who have their 4th dose of DTaP, and 3) the number of those children noted as moved or going elsewhere and those marked as non-responders.

Programs Providing Funds for this Objective

Immunization: \$19,674

Agency Funds for this Objective:

Data Source for Measurement

Wisconsin Immunization Registry records.

Baseline for Measurement

CASA Assessment completed on Sept. 19, 2005 showed 77.4% of Manitowoc County children in the assessment period received their 4th dose of DTaP vaccine by age 19 months.

Context

Children who will turn 19 months of age during the contract year 2006 will be assessed for receipt of the 4th dose of DTaP. Only children who have moved out of the agency's jurisdiction (MOGE) or have failed to respond to three reminder/recall attempts or their mail has been returned undeliverable may be removed from the cohort for analysis.

Input Activities

Provide area immunization providers with immunization assessment and information related to DTaP completion by 19 months of age. Educate area immunization providers on methods to improve immunization rates, including tracking and recall. Implement aggressive recall of children ages 12-15 months within the Manitowoc County Health Department Immunization client base for 4th dose DTaP.

Contract #: 13717

Agency: Marathon County Health Department

Contract Year: 2006

Program: Immunization

Objective #: 1 of 2

Objective Value: \$14,520

Objective: Primary Details

Objective Statement

By December 31, 2006, 91% of Marathon County children between the ages of 24-35 months will receive 4 DTaP, 3 Polio, 1 MMR, 3 Hib, 3 HepB.

Deliverable Due Date: 01/31/2007

Contract Deliverable (Evidence)

WINCASA report with data obtained from RECIN and/or the Wisconsin Immunization Registry of the percentage of Marathon County children between the ages of 24-35 months of age who received 4 DTaP, 3 Polio, 1 MMR, 3 Hib, 3 HepB. Age-appropriate immunization includes up-to-date and late up-to-date.

Programs Providing Funds for this Objective

Immunization: \$14,520

Agency Funds for this Objective:

Data Source for Measurement

WINCASA assessments from RECIN and/or Wisconsin Immunization Registry.

Baseline for Measurement

As of July 23, 2002, 90.88% (up-to-date and late-up-to-date); as of August 9, 2003, 92.42% (up-to-date and late-up-to-date); as of August 12, 2004, 92.90% (up-to-date and late-up-to-date); as of 8/23/2005, 92.47% (up-to-date and late-up-to-date).

Context

In 2005, Aspirus Inc. hospital and clinics switched from RECIN to the Wisconsin Immunization Registry (WIR) as their immunization registry. Although there is currently an interface between WIR and RECIN which transfers information by batch load on a weekly basis, the exchange of data is not problem-free, not is it always complete. Once the Aspirus system completes its transition to WIR by late 2005, the transfer of immunization data to RECIN will be even less complete unless significant programming changes occur in both systems. Marathon County Health Department has been actively involved in negotiations with Marshfield Clinic and the Wisconsin Immunization Program to allocate funding for these programming changes, which would be completed by December 2006 at the earliest. In the meantime, Marathon County Health Department's ability to provide tiered intervention and adequately assess immunization rates may be negatively impacted.

Children ages 24-35 months will be assessed for completion of the 4 DTaP, 3 Polio, 1 MMR, 3 Hib and 3 HepB; it includes all up-to-date and late-up-to-date children. This objective includes all the county's children whose records are in the Regional Childhood Immunization Network system and/or the Wisconsin Immunization Registry, not just those of the local health department. While it is impossible to know if all children are in these registries, the number in any given age year is equal to the usual annual birth cohort, approximately 1,500 births per year, suggesting fairly complete coverage.

Input Activities

At present, all Marathon County Immunization providers are using either RECIN or WIR to track immunizations and have interventions in place to increase the immunization rate. The immunization rate has consistently been identified as a priority community health issue in the LIFE report. Key activities related to this objective include implementation of tiered intervention through RECIN and working with the Aspirus system on intervention strategies through WIR.

Program: Immunization

Agency: Marathon County Health Department
Objective #: 2 of 2

Contract Year: 2006
Objective Value: \$14,519

Objective: Primary Details

Objective Statement

By December 31, 2006, 91% of Marathon County children between the ages of 24-35 months will receive one varicella immunization.

Deliverable Due Date: 01/31/2007

Contract Deliverable (Evidence)

WINCASA report with data obtained from RECIN and/or the Wisconsin Immunization Registry of the percentage of Marathon County children between the ages of 24-35 months of age who received one varicella immunization.

Programs Providing Funds for this Objective

Immunization: \$14,519

Agency Funds for this Objective:

Data Source for Measurement

Single antigen assessments from RECIN and/or WIR.

Baseline for Measurement

Varicella coverage has not been assessed in the past. Single antigen reports run recently in RECIN indicate coverage levels of approximately 90-93% in 24-35 month olds. Assessments in 2006 will provide us with better data for setting baseline measurements.

Context

Children ages 24-35 months will be assessed for receipt of one varicella immunization or history of disease. This objective includes all the county's children whose records are in the Regional Childhood Immunization Network system and/or the Wisconsin Immunization Registry, not just those of the local health department. In 2006, CDC will add varicella vaccine coverage in 24-35 month old children to assessments of age-appropriate immunizations. Although we will be assessing varicella coverage separately from other immunizations in 2006, our goal is to combine varicella with the other age-appropriate immunizations, beginning in 2007.

Input Activities

At present, all Marathon County providers are using either RECIN or WIR to track immunizations and have interventions in place to increase the immunization rate. The immunization rate has been consistently identified as a priority community health issue in the LIFE report. Key activities related to this objective include implementation of tiered intervention through RECIN and/or WIR.

Contract #: 13718
Program: Immunization

Agency: Marinette County Health Department
Objective #: 1 of 1

Contract Year: 2006
Objective Value: \$11,370

Objective: Primary Details

Objective Statement

By December 31, 2006, 82% of children residing in Marinette County who turn 19 months of age during 2006 will have their 4th dose of DTaP.

Deliverable Due Date: 01/31/2007

Contract Deliverable (Evidence)

A report to summarize a statistically valid survey that provides: 1) the total number of children residing in Marinette County who turned 19 months of age in 2006, 2) CASA or Wisconsin Immunization Registry generated documentation of the number of those children who have their 4th dose of DTaP, and 3) the number of those children noted as moved or going elsewhere and those marked as non-responders.

Programs Providing Funds for this Objective

Immunization: \$11,370

Agency Funds for this Objective:

Data Source for Measurement

Wisconsin Immunization Registry records.

Baseline for Measurement

New initiative. Marinette County has reached 90% compliance level achieved for primary series by 36 months for the past several years. Information regarding the 12-19 month cohort with 4th DTaP in 2004 indicates 80% compliance level. Using that as a baseline, we will try to increase this rate by 2% in 2006.

Context

Children who will turn 19 months of age during the contract year 2006 will be assessed for receipt of the 4th dose of DTaP. Only children who have moved out of the agency's jurisdiction (MOGE) or have failed to respond to three reminder/recall attempts or their mail has been returned undeliverable may be removed from the cohort for analysis.

Input Activities

The project has an extensive follow-up system in place to inform families of their need to update their child's immunizations. The project will target the children at 15 months so that by 19 months they have their 4th dose of DTaP.

Program: Immunization

Agency: Marquette County Health Department
Objective #: 1 of 1

Contract Year: 2006
Objective Value: \$5,476

Objective: Primary Details

Objective Statement

During the contract period, 85% of infants born in Marquette County who turn three months of age in 2006 will receive 1 DTaP, 1 Polio, 1 Hib and 1 HepB vaccine by four months of age.

Deliverable Due Date: 01/31/2007

Contract Deliverable (Evidence)

A report to summarize a statistically valid survey that provides: 1) the total number of children born in Marquette County who turned three months of age in 2006, 2) CASA or Wisconsin Immunization Registry generated documentation of the number of those children who received 1 DTaP, 1 Polio, 1 Hib and 1 HepB vaccine by four months of age, and 3) the number of those children noted as moved or going elsewhere and those marked as non-responders.

Programs Providing Funds for this Objective

Immunization: \$5,476

Agency Funds for this Objective:

Data Source for Measurement

Wisconsin Immunization Registry records.

Baseline for Measurement

Context

The cohort of children to be analyzed for this objective will be those children born during the period October 1, 2005 through September 30, 2006. Children will be assessed for having at least 1 DTaP, 1 Polio, 1 Hib and 1 HepB vaccine by four months of age. Only children who have moved out of the agency's jurisdiction (MOGE) or have failed to respond to three reminder/recall attempts or their mail has been returned undeliverable may be removed from the cohort for analysis. The goal of this objective is to help identify patient and system level barriers that place children at risk of not completing their primary series of immunization on schedule. Access to primary and preventive health services is one of the priorities identified in Wisconsin's State Health Plan, Healthiest People 2010: A Partnership Plan to Improve the Health of the Public. Children who begin their community-based immunizations by three months of age are more likely to complete the primary series of 4 DTaP, 3 Polio, 1 MMR, 3 Hib, 3 HepB and 1 Varicella by 24 months of age. This objective also addresses the Healthy People 2010: 14-26 goal to "Increase the proportion of children who participate in fully operational population-based immunization registries" by identifying local gaps in Wisconsin Immunization Registry.

Contract #: 13756

Agency: Milwaukee City Health Department

Contract Year: 2006

Program: Immunization

Objective #: 1 of 4

Objective Value: \$100,000

Objective: Primary Details

Objective Statement

By December 31, 2006, 80% of children enrolled in 20 schools within the Milwaukee Public Schools system will be compliant with school immunization law for the 2006-2007 school year.

Deliverable Due Date: 01/31/2007

Contract Deliverable (Evidence)

A report to include or document: 1) a copy of the Milwaukee Public Schools compliance report by school, 2) a summary of City of Milwaukee Health Department activities to achieve school immunization compliance, including stakeholder meetings with school staff and the District Attorney's office, and 3) a copy of all developed social marketing materials.

Programs Providing Funds for this Objective

Immunization: \$100,000

Agency Funds for this Objective:

Data Source for Measurement

Milwaukee Public Schools' School Compliance Report to Local Health Departments or hand tally of compliance rate if report is unavailable.

Baseline for Measurement

The compliance rate per Milwaukee Public Schools' reports is 61% overall for the 2005-2006 school year. For the schools selected for participation or targeted by this objective, the baseline from the 2005-2006 school year is 38%. This reflects a total student body of 16,505; with 1,208 children in process, 9,257 who are behind and 933 with no record. Baseline by school and year (2004-2005 and then 2005-2006): 1) Bay View High School 68.27% and 36.49%, 2) Bethune (37th Street) N/A and 44.11%, 3) Bradley School of Technology & Trade 71.52% and 44.11%, 4) Community High School 53.57% and 23.89%, 5) Genesis High School 49.35% and 20.99%, 6) Hamilton High School 84.62% and 49.19%, 7) King High School 78.85% and 48.74%, 8) New Hope Institute of Science & Technology 29.94% and 18.47%, 9) Next Door Foundation 25.71% and 5.56%, 10) Phoenix High School 57.14% and 23.01%, 11) Pulaski High School 71.56% and 41.03%, 12) Riverside University High School 81.79% and 44.08%, 13) School of Humanities 45.14% and 17.78%, 14) South Division High School 54.96% and 27.61%, 15) Truth Institute for Leadership 47.50% and 19.61%, 16) Vincent High School 66.36% and 31.55%, 17) WHS Expeditionary Learning N/A and 20.33%, 18) WHS of Information Technology N/A and 23.41%, 19) WHS of Law Education N/A and 21.07%.

Context

Immunizations are required by state law for school attendance. Schools selected for participation will either have a compliance rate less than 50% or more than 100 non-compliant students. The success of this objective is contingent upon the cooperation provided by Milwaukee Public Schools (MPS) and continued access by the Health Department to the MPS student record system.

Input Activities

The City of Milwaukee Health Department (MHD) will query the Wisconsin Immunization Registry (WIR) for children from 20 schools in the Milwaukee Public Schools system to identify those who are identified as being non-compliant in ESIS. WIR records will be forwarded to the appropriate school. Children not in WIR or identified as being behind on their immunizations in WIR will be sent via mail a notice from the MHD. A comparison will be done of the completeness of MPS records versus WIR records and the effectiveness of MPS notices versus MHD notices. MHD will have at least six weekend clinics corresponding to MPS compliance mailings. MHD will have at least two clinics at MPS locations. MHD will provide information to the Milwaukee County District Attorney to allow for legal action to be taken against non-compliant parents. MHD will develop materials to be included in MPS compliance mailings regarding free immunizations provided by MHD. The MHD will conduct a social marketing campaign with the Milwaukee County District Attorney aimed at increasing school immunization compliance. Parents who fail to comply with an initial mailing will receive a follow-up letter via registered mail. Continued failure to comply will result in up to three phone call attempts. Up to 125 parents who fail to comply with both the phone calls and letters will receive a home visit by MHD. Up to two attempts will be made per child who is out of compliance.

Agency: Milwaukee City Health Department

Contract Year: 2006

Program: Immunization

Objective #: 1 of 4

Objective Value: \$100,000

Objective: Risk Profile

Accountability Targets

The following activities will serve as the accountability targets for the accomplishment of this objective. City of Milwaukee Health Department (MHD) will look up in the Wisconsin Immunization Registry (WIR) children from 20 Milwaukee Public Schools (MPS) who are identified as being noncompliant in ESIS. WIR records will be forwarded to the appropriate school. Children not in WIR or identified as being behind on their immunizations in WIR will be sent via mail a notice from the Health Department. A comparison will be done of the completeness of MPS records versus WIR records and the effectiveness of MPS notices versus MHD notices. MHD will have at least six weekend clinics corresponding to MPS compliance mailings. MHD will have at least two clinics at MPS locations. MHD will provide information to the Milwaukee County District Attorney to allow for legal action to be taken against non-compliant parents. MHD will develop materials to be included in MPS compliance mailings regarding free immunizations provided by MHD. The MHD will conduct a social marketing campaign with the Milwaukee County District Attorney aimed at increasing school immunization compliance. Parents who fail to comply to initial mailing will receive a follow-up letter via registered mail. Continued failure to comply will result in up to three phone call attempts. Up to 125 parents who fail to comply with both the phone calls and letters will receive a home visit by MHD. Up to two attempts will be made per child out of compliance.

Contract #: 13756
Program: Immunization

Agency: Milwaukee City Health Department
Objective #: 2 of 4

Contract Year: 2006
Objective Value: \$70,000

Objective: Primary Details

Objective Statement

By December 31, 2006, 250 healthcare providers will increase their knowledge of immunization practices through their participation in immunization education sessions held by the City of Milwaukee Health Department and the Protect All Kids Coalition.

Deliverable Due Date: 01/31/2007

Contract Deliverable (Evidence)

A report to include or document: 1) the number of providers invited to the Winter or Spring sessions and the number who attended, 2) the number of attendees with increased knowledge of immunization practices, 3) a copy of the symposium agendas and evaluation tools, 4) the number of attendees who requested onsite education or evaluation, and those clinics willing to participate in onsite evaluation when contacted by the Health Department, 5) a summary report of education and evaluation activities by clinic, and 6) a copy of onsite educational materials and practice evaluation tools.

Programs Providing Funds for this Objective

Immunization: \$70,000

Agency Funds for this Objective:

Data Source for Measurement

City of Milwaukee Health Department records.

Baseline for Measurement

Number of attendees with increased knowledge - 2005 baseline will be available in November of 2005. No baseline measurement for clinic based education, though more than 20 participants in the Spring 2005 symposium indicated they would be interested in the Health Department coming onsite to do additional education and evaluation activities.

Context

The City of Milwaukee Health Department (MHD) Immunization Program and Protect All Kids Coalition staff will work with members of the Coalition and friends of the Coalition to ensure that the Milwaukee community has accurate and correct immunization information to share with professional workers, community-based organizations and families. A minimum of 500 people will be invited to each of the educational sessions. MHD will follow-up with clinics by providing additional education and/or conducting an immunization practice evaluation for those that indicate they want individual assistance in improving their immunization practice.

Input Activities

City of Milwaukee Health Department and the Protect All Kids Coalition will sponsor two immunization symposiums, with a minimum of 500 immunization providers invited to each. All symposium participants will be asked to complete a knowledge assessment post test and will be offered the opportunity for onsite education and evaluation. All attendees who indicate willingness to participate in onsite assistance will be contacted and offered onsite education and evaluation, with clinic based education and evaluation tailored to meet the clinic's specific requests or needs. A report of all activities to increase community involvement in the Protect All Kids Coalition.

Contract #: 13756
Program: Immunization

Agency: Milwaukee City Health Department
Objective #: 3 of 4

Contract Year: 2006
Objective Value: \$54,564

Objective: Primary Details

Objective Statement

By December 31, 2006, 90% of children 0-35 months of age served by the City of Milwaukee Health Department Immunization Program will have age appropriate immunizations.

Deliverable Due Date: 01/31/2007

Contract Deliverable (Evidence)

A report to include or document: 1) a copy of the year-end CASA summary report to measure the immunization compliance rate for those children in the 0-35 month cohort, and 2) by quarter the number of reminder recall notices sent by regular mail and registered mail, the number of follow-up phone call attempts and home visit attempts.

Programs Providing Funds for this Objective

Immunization: \$54,564

Agency Funds for this Objective:

Data Source for Measurement

CASA, Wisconsin Immunization Registry and agency records.

Baseline for Measurement

Age appropriate immunizations are defined as the sum of up-to-date and late-up-to-date for the CASA cohort defined at the beginning of the grant year. The CASA report run on June 20, 2005 on this year's cohort indicates the number of children in the 12-24 month age group at 12 months of age to be 49.23% up-to-date and 36.92 % late-up-to-date, or 86.15% having received age appropriate immunizations. The number of children in the 24-35 month age group at 24 months of age was 58.18% up-to-date and 30.91 % late-up-to-date, or 86.15% having received age appropriate immunizations. The total number of children included in reminder recall will be approximately 500.

Context

Children 12-23 months will be assessed for completion of 3 DTP, 2 Polio, 2 Hib, and 2 HepB. Children 24-35 months will be assessed for completion of 4 DTP, 3 Polio, 1 MMR, 3 Hib, and 3 HepB at 24 months of age. For the purposes of CASA assessment, the cohort for measurement will be defined as City of Milwaukee Health Department Immunization Program clients 0-35 months of age as of January 1, 2006.

Input Activities

The City of Milwaukee Health Department (MHD) will send quarterly reminder recall letters to all clients ages 0-35 months of age. Medical homes will be documented on client's individual immunization consent and entered into the Wisconsin Immunization Registry and referrals made to Medicaid Outreach staff if no medical home is indicated. Letters will be sent to private providers indicating their client was seen in a MHD clinic, including the immunizations given by the MHD nurse. The MHD will re-activate clients who return after indicating that they have a private provider and will keep them active for the remainder of the year. Having active status means that they will receive tracking and recall through letters, etc. Parents who fail to respond to the initial reminder recall letter will be sent subsequent letters via registered mail. Failure to respond to the registered letter will result in up to three phone calls. If parents fail to respond to phone calls or a valid number is not available, MHD will conduct a home visit; with a maximum of 25 home visit attempts during 2006.

Contract Year: 2006
Objective Value: \$84,000

Objective: Primary Details

Objective Statement

By December 31, 2006, 80% of children 6 to 18 months of age as of January 1, 2006 who live in targeted zip code areas within the city of Milwaukee and have one shot or none documented in the Wisconsin Immunization Registry will know their medical home and have begun their primary immunization series.

Deliverable Due Date: 01/31/2007

Contract Deliverable (Evidence)

A report to document or include: 1) the number of children 6-18 months of age as of January 1, 2006 noted in the Wisconsin Immunization Registry as residing in the targeted zip code areas, 2) the number of those children who have begun the primary immunization series, 3) the number of those children with a medical home provider and/or insurance coverage, 4) immunization history, and 5) a summary of related case management activities.

Programs Providing Funds for this Objective

Immunization: \$84,000

Agency Funds for this Objective:

Data Source for Measurement

Wisconsin Immunization Registry and City of Milwaukee Health Department records.

Baseline for Measurement

Wisconsin Immunization Registry 2005 detail notes 1,076 children living in the targeted zip codes areas who have one shot or less.

Context

This will be the first year of a multi-year objective to increase utilization of primary medical homes for immunizations. The purpose of this objective is to better define where Milwaukee children are accessing medical care. The intent is that in subsequent years outreach can be done with providers to increase practice level immunization rates, the availability of immunization records in the Wisconsin Immunization Registry, and the number of Milwaukee children enrolled in Medicaid with a regularly used medical home. Targeted zip codes targeted exclusive to the city of Milwaukee include: 53202, 53203, 53204, 53205, 53206, 53207, 53208, 53210, 53212, 53215, 53216, 53218, 53221, 53233.

Input Activities

For children noted in the Wisconsin Immunization Registry (WIR) as having insurance, City of Milwaukee Health Department (MHD) will identify a medical provider for that child and if healthcare services have been accessed by that child. For 100 children in WIR identified as not having insurance, MHD will provide case management that will include assistance in obtaining Medicaid coverage, selecting a medical home and making an appointment for needed immunizations. MHD will follow-up with these clients to determine if the appointment was kept and if immunizations were given. Clients receiving case management who have missed the initial appointment will be helped in making another appointment. Children selected for case management will be a random sample of African American children.

Contract #: 13720
Program: Immunization

Agency: Monroe County Health Department
Objective #: 1 of 1

Contract Year: 2006
Objective Value: \$12,735

Objective: Primary Details

Objective Statement

During the contract period, 70% of infants born in Monroe County who turn three months of age in 2006 will receive 1 DTaP, 1 Polio, 1 Hib and 1 HepB vaccine by four months of age.

Deliverable Due Date: 01/31/2007

Contract Deliverable (Evidence)

A report to summarize a statistically valid survey that provides: 1) the total number of children born in Monroe County who turned three months of age in 2006, 2) CASA or Wisconsin Immunization Registry generated documentation of the number of those children who received 1 DTaP, 1 Polio, 1 Hib and 1 HepB vaccine by four months of age, and 3) the number of those children noted as moved or going elsewhere and those marked as non-responders.

Programs Providing Funds for this Objective

Immunization: \$12,735

Agency Funds for this Objective:

Data Source for Measurement

Wisconsin Immunization Registry records.

Baseline for Measurement

This is a new initiative. However, the current Wisconsin Immunization Registry assessment from August 2005 provided a baseline of 48.8% per this population.

Context

The cohort of children to be analyzed for this objective will be those children born during the period October 1, 2005 through September 30, 2006. Children will be assessed for having at least 1 DTaP, 1 Polio, 1 Hib and 1 HepB vaccine by four months of age. Only children who have moved out of the agency's jurisdiction (MOGE) or have failed to respond to three reminder/recall attempts or their mail has been returned undeliverable may be removed from the cohort for analysis. The goal of this objective is to help identify patient and system level barriers that place children at risk of not completing their primary series of immunization on schedule. Access to primary and preventive health services is one of the priorities identified in Wisconsin's State Health Plan, Healthiest People 2010: A Partnership Plan to Improve the Health of the Public. Children who begin their community-based immunizations by three months of age are more likely to complete the primary series of 4 DTaP, 3 Polio, 1 MMR, 3 Hib, 3 HepB and 1 Varicella by 24 months of age. This objective also addresses the Healthy People 2010: 14-26 goal to "Increase the proportion of children who participate in fully operational population-based immunization registries" by identifying local gaps in Wisconsin Immunization Registry.

Input Activities

Staff time, mileage, medical clinics, schools, computer, postage, parents, interpreter, quality criteria, Wisconsin Immunization Registry (WIR) and CASA. Our challenges include we have the second largest Amish population in Wisconsin who do not seek immunization until later in their child's life or if at all. Also, we have a significant uninsured, undocumented Latino population residing in Monroe County. There are a total of 16 medical clinics utilized by Monroe County residents, some who do not use WIR and others who enter the data on a quarterly basis. This presents delayed data reports.

Agency: Neenah Department of Public Health
Objective #: 1 of 1

Contract Year: 2006
Objective Value: \$9,444

Objective: Primary Details

Objective Statement

By December 31, 2006, 80% of children served by the Neenah Department of Public Health Immunization Program who will be 24-35 months of age as of October 31, 2006 will complete their primary immunizations.

Deliverable Due Date: 01/31/2007

Contract Deliverable (Evidence)

A report to include documentation of the number of children served by the Neenah Department of Public Health Immunization Program who were 24-35 months of age as of October 31, 2006, and the number of those children who completed their primary immunizations.

Programs Providing Funds for this Objective

Immunization: \$9,444

Agency Funds for this Objective:

Data Source for Measurement

Agency records and CASA summary report of late-up-to-date immunizations.

Baseline for Measurement

As of September 2005, CASA results were 80% completion (215 of 272) of primary immunizations.

Context

Children will be assessed for their completion of the 4 DTaP, 3 Polio, 1 MMR, 3 Hib, 3 HepB and 1 varicella immunization series. The estimate is there are 272 children in this cohort of patients. This is a new initiative due to the inclusion of varicella in the primary series this year.

Input Activities

Staff spend their time tracking the cohort and providing educational outreach to parents to assure that appropriate immunizations are received.

Contract Deliverable (Evidence)

A CASA report to include documentation on the number of Oneida County children who were 24-36 months of age by December 31, 2006, and the number of those children who completed their primary immunizations by 24 months of age.

Programs Providing Funds for this Objective

Immunization: \$9,244

Agency Funds for this Objective:

Data Source for Measurement

A county-wide CASA report run after October 1, 2006.

Baseline for Measurement

CASA report for Oneida County as of February 17, 2005 showed 76% immunization coverage county-wide.

Context

Children will be assessed for their completion of the 4 DTaP, 3 polio, 1 MMR, 3 Hib, 3 HepB, and 1 Varicella immunization series by 24 months of age. All providers in Oneida County enter immunization information into the Wisconsin Immunization Registry or RECIN. CASA reports on county residents provide an accurate assessment of the immunization status of this population. Oneida County Health Department also initiated a Oneida County Communicable Disease group in January of 2005 that includes Ministry clinics and hospitals in Rhinelander and Minocqua. This group meets regularly to assure that a comprehensive system of immunization, communicable disease surveillance and follow-up, and community education and follow-up is in place for Oneida County.

Input Activities

Oneida County Health Department will continue to encourage clients to utilize their medical home for immunization services. Oneida County will work with local providers to implement a system of recall/reminders to achieve the goal of 80% immunization coverage, which parallels the Wisconsin Immunization Program goal for 2006. Oneida County Health Department will also continue in a leadership role in the Oneida County Communicable Disease group.

Agency: Oneida Tribe of Indians of Wisconsin
Objective #: 1 of 1

Contract Year: 2006
Objective Value: \$6,103

Objective: Primary Details

Objective Statement

By September 30, 2006, 86% of children served by the Oneida Community Health Center Immunization Program who are 12-35 months of age as of January 1, 2006 will receive age appropriate immunizations.

Deliverable Due Date: 10/31/2006

Contract Deliverable (Evidence)

A CASA report to include documentation of the number of children served by the Oneida Community Health Center Immunization Program who were 12-35 months of age as of January 1, 2006, and the number of those children with age appropriate immunizations.

Programs Providing Funds for this Objective

Immunization: \$6,103

Agency Funds for this Objective:

Data Source for Measurement

CASA report.

Baseline for Measurement

2005 mid-year data showed 84% of 296 children who were 12-35 months of age received age appropriate immunizations.

Context

Children ages 12-35 months will be assessed for their completion of the 4 DTaP, 3 polio, 1 MMR, 3 Hib, 3 HepB immunization series by 24 months of age. Contract year 2005 objective was 86%.

Input Activities

The Oneida Community Health Center staff will track and recall families to assure appropriate immunizations and provide community outreach. For the time being, the clinic will continue a weekly walk-in immunization clinic to provide a reliable resource for families.

Program: Immunization

Agency: Oshkosh Health Department
Objective #: 1 of 2

Contract Year: 2006
Objective Value: \$8,000

Objective: Primary Details

Objective Statement

By December 31, 2006, 90% of children served by the Oshkosh City Health Department Immunization Program who will be 24-35 months of age as of December 31, 2006 will complete their primary immunizations by 35 months of age.

Deliverable Due Date: 01/31/2007

Contract Deliverable (Evidence)

A report to include documentation of the number of children served by the Oshkosh City Health Department Immunization Program who were 24-35 months of age as of December 31, 2006, and the number of those children who completed their primary immunizations by 35 months of age.

Programs Providing Funds for this Objective

Immunization: \$8,000

Agency Funds for this Objective:

Data Source for Measurement

Agency records and CASA Summary Report of up-to-date, and late-up-to-date immunizations by 35 months of age.

Baseline for Measurement

CASA results indicated 90% of children followed by Oshkosh City Health Department completed their primary immunizations.

Context

Children will be assessed for their completion of the 4 DTaP, 3 Polio, 1 MMR, 3 Hib, 3 HepB immunization series by 35 months of age. The estimate is there are 300 children in this cohort of patients.

Input Activities

Oshkosh City Health Department will be targeting children who are due for their primary immunizations by mailing consent forms to parents along with our monthly immunization clinic schedules. Oshkosh Health Service Division clinic schedules are also distributed to all area medical providers and to the Oshkosh Area School System. Immunization dates are inputted in to the Wisconsin Immunization Registry (WIR). Attend WIR user group meetings to keep informed of updates and changes within the system. Individual appointments for children's immunizations are also set up as needed. Education, evaluating children's immunization records, and vaccine administration are implemented at our clinics.

Contract #: 13772

Agency: Oshkosh Health Department

Contract Year: 2006

Program: Immunization

Objective #: 2 of 2

Objective Value: \$5,613

Objective: Primary Details

Objective Statement

During the contract period, 85% of infants born in the city of Oshkosh who turn three months of age in 2006 will receive 1 DTaP, 1 Polio, 1 Hib and 1 HepB vaccine by four months of age.

Deliverable Due Date: 01/31/2007

Contract Deliverable (Evidence)

A report to summarize a statistically valid survey that provides: 1) the total number of children born in the city of Oshkosh who turned three months of age in 2006, 2) CASA or Wisconsin Immunization Registry generated documentation of the number of those children who received 1 DTaP, 1 Polio, 1 Hib and 1 HepB vaccine by four months of age, and 3) the number of those children noted as moved or going elsewhere and those marked as non-responders.

Programs Providing Funds for this Objective

Immunization: \$5,613

Agency Funds for this Objective:

Data Source for Measurement

Wisconsin Immunization Registry records.

Baseline for Measurement

New objective. Receiving and recording immunization dates on all children who attend our immunization clinic.

Context

The cohort of children to be analyzed for this objective will be those children born during the period October 1, 2005 through September 30, 2006. Children will be assessed for having at least 1 DTaP, 1 Polio, 1 Hib and 1 HepB vaccine by four months of age. Only children who have moved out of the agency's jurisdiction (MOGE) or have failed to respond to three reminder/recall attempts or their mail has been returned undeliverable may be removed from the cohort for analysis. The goal of this objective is to help identify patient and system level barriers that place children at risk of not completing their primary series of immunization on schedule. Access to primary and preventive health services is one of the priorities identified in Wisconsin's State Health Plan, Healthiest People 2010: A Partnership Plan to Improve the Health of the Public. Children who begin their community-based immunizations by three months of age are more likely to complete the primary series of 4 DTaP, 3 Polio, 1 MMR, 3 Hib, 3 HepB and 1 Varicella by 24 months of age. This objective also addresses the Healthy People 2010: 14-26 goal to "Increase the proportion of children who participate in fully operational population-based immunization registries" by identifying local gaps in Wisconsin Immunization Registry.

Input Activities

Checking birth records of children born during October 2005 through September 2006. Keeping in contact with providers and medical records departments of clinics by checking immunization records. Sending out the Oshkosh Health Division Immunization Schedule to physicians and families with children who are due for their primary immunizations. Individual appointments are made for children as needed. Clinic immunization schedules are also sent out in postpartum packets.

Agency: Outagamie County Public Health Division
Objective #: 1 of 1

Contract Year: 2006
Objective Value: \$24,674

Objective: Primary Details

Objective Statement

By December 31, 2006, 88% of children served by the Outagamie County Health Department Immunization Program who will be 24-35 months of age as of December 31, 2006 will complete their primary immunizations by 35 months of age.

Deliverable Due Date: 01/31/2007

Contract Deliverable (Evidence)

A report to include documentation of the number of children served by the Outagamie Health Department Immunization Program who were 24-35 months of age as of December 31, 2006, and the number of those children who completed their primary immunizations by 35 months of age.

Programs Providing Funds for this Objective

Immunization: \$24,674

Agency Funds for this Objective:

Data Source for Measurement

Agency records and CASA Summary Report of late-up-to-date immunizations by 35 months of age.

Baseline for Measurement

Mid-year 2005, CASA completion rate was 89.6%.

Context

Children will be assessed for their completion of the 4 DTaP, 3 polio, 1 MMR, 3 Hib, 3 HepB immunization series by 35 months of age. The estimate is there are 490 children in this cohort of patients.

Input Activities

Public Health Nurses investigate all vaccine preventable communicable diseases and educate the medical community on the disease. The Public Health Nurses will assure delivery of immunization services by offering 48 immunization clinics at eight sites throughout the service area per year. During 2004, 925 children received 2,155 vaccines. In addition, influenza vaccine is also offered and 289 children were immunized against the flu in 2003. The number of non-English speaking clients continues to rise and Spanish speaking translators are at seven of the eight clinic sites. Walk-ins are accommodated at all clinics, as well as in the Public Health office. All data is entered in the Wisconsin Immunization Registry. Three Public Health Nurses are active in the Northeast Wisconsin Immunization Coalition, with one as the position of secretary. All Public Health Nurses are required to attend the four-part Epidemiology of Vaccine Preventable Diseases, as well as other Centers for Disease Control immunization and communicable disease updates. Public Health Nurses review all student records for the Wisconsin School Immunization Law.

Program: Immunization

Agency: Ozaukee County Public Health Department
Objective #: 1 of 1

Contract Year: 2006
Objective Value: \$15,103

Objective: Primary Details

Objective Statement

During the contract period, 82% of infants born in Ozaukee County who turn three months of age in 2006 will receive 1 DTaP, 1 Polio, 1 Hib and 1 HepB vaccine by four months of age.

Deliverable Due Date: 01/31/2007

Contract Deliverable (Evidence)

A report to summarize a statistically valid survey that provides: 1) the total number of children born in Ozaukee County who turned three months of age in 2006, 2) CASA or Wisconsin Immunization Registry generated documentation of the number of those children who received 1 DTaP, 1 Polio, 1 Hib and 1 HepB vaccine by four months of age, and 3) the number of those children noted as moved or going elsewhere and those marked as non-responders.

Programs Providing Funds for this Objective

Immunization: \$15,103

Agency Funds for this Objective:

Data Source for Measurement

Wisconsin Immunization Registry records.

Baseline for Measurement

There were 897 births from July 1, 2003 to July 1, 2004. Based on December 31, 2004 baseline data for 679 clients, only 87.5% were up-to-date at three months of age. Approximately 24% (218 out of 897) of birth cohort are records unaccounted for. This is a new initiative.

Context

The cohort of children to be analyzed for this objective will be those children born during the period October 1, 2005 through September 30, 2006. Children will be assessed for having at least 1 DTaP, 1 Polio, 1 Hib and 1 HepB vaccine by four months of age. Only children who have moved out of the agency's jurisdiction (MOGE) or have failed to respond to three reminder/recall attempts or their mail has been returned undeliverable may be removed from the cohort for analysis. The goal of this objective is to help identify patient and system level barriers that place children at risk of not completing their primary series of immunization on schedule. Access to primary and preventive health services is one of the priorities identified in Wisconsin's State Health Plan, Healthiest People 2010: A Partnership Plan to Improve the Health of the Public. Children who begin their community-based immunizations by three months of age are more likely to complete the primary series of 4 DTaP, 3 Polio, 1 MMR, 3 Hib, 3 HepB and 1 Varicella by 24 months of age. This objective also addresses the Healthy People 2010: 14-26 goal to "Increase the proportion of children who participate in fully operational population-based immunization registries" by identifying local gaps in Wisconsin Immunization Registry.

Input Activities

Enhanced tracking and recall of children behind schedule for immunizations within Ozaukee County Public Health Department (OCPHD) programs and local private providers using Wisconsin Immunization Registry (WIR) data: outreach to high risk populations, including WIC Program clients; work with other local providers to access missing immunization records; provision of service through regular immunization clinics and in-office visits through WIC/MCH programs; outreach to media, daycares and private medical providers; update immunization dates in WIR as missing immunization records are received. The OCPHD will extend clinic hours and vary days and hours to meet the needs of working parents. Attempt to eliminate barriers to immunizations through enhanced partnerships with county private providers and increased communication with adjacent county immunization partners. The Health Department will continue to work with private providers to promote WIR use.

Objective Statement

By December 31, 2006, 78% of infants born in Pepin County who turn three months of age in 2006 will receive 1 DTaP, 1 Polio, 1 Hib and 1 HepB vaccine by four months of age.

Deliverable Due Date: 01/31/2007

Contract Deliverable (Evidence)

A report to summarize a statistically valid survey that provides: 1) the total number of children born in Pepin County who turned three months of age in 2006, 2) CASA or Wisconsin Immunization Registry generated documentation of the number of those children who received 1 DTaP, 1 Polio, 1 Hib and 1 HepB vaccine by four months of age, and 3) the number of those children noted as moved or going elsewhere and those marked as non-responders.

Programs Providing Funds for this Objective

Immunization: \$4,321

Agency Funds for this Objective:

Data Source for Measurement

Wisconsin Immunization Registry records.

Baseline for Measurement

Our previous 96% objectives were targeted at non-Amish children. About 18-20% of Pepin County babies are Amish.

Context

The cohort of children to be analyzed for this objective will be those children born during the period October 1, 2005 through September 30, 2006. Children will be assessed for having at least 1 DTaP, 1 Polio, 1 Hib and 1 HepB vaccine by four months of age. Only children who have moved out of the agency's jurisdiction (MOGE) or have failed to respond to three reminder/recall attempts or their mail has been returned undeliverable may be removed from the cohort for analysis. The goal of this objective is to help identify patient and system level barriers that place children at risk of not completing their primary series of immunization on schedule. Access to primary and preventive health services is one of the priorities identified in Wisconsin's State Health Plan, Healthiest People 2010: A Partnership Plan to Improve the Health of the Public. Children who begin their community-based immunizations by three months of age are more likely to complete the primary series of 4 DTaP, 3 Polio, 1 MMR, 3 Hib, 3 HepB and 1 Varicella by 24 months of age. This objective also addresses the Healthy People 2010: 14-26 goal to "Increase the proportion of children who participate in fully operational population-based immunization registries" by identifying local gaps in Wisconsin Immunization Registry.

Input Activities

Ongoing outreach and media releases to encourage age-appropriate immunizations. The Health Department is the only immunization provider in the county. We will continue relationships with local clinics, as they do not provide childhood immunizations.

Program: Immunization

Agency: Pierce County Health Department
Objective #: 1 of 1

Contract Year: 2006
Objective Value: \$9,473

Objective: Primary Details

Objective Statement

During the contract period, 80% of infants who reside in Pierce County (according to the Wisconsin Confidential Birth Reports as entered in the Wisconsin Immunization Registry) who turn three months of age between January 1, 2006 and December 1, 2006 will receive 1 DTaP, 1 Polio, 1 Hib and 1 HepB vaccination by four months of age.

Deliverable Due Date: 01/31/2007

Contract Deliverable (Evidence)

A report to summarize a statistically valid survey that provides: 1) the total number of infants who reside in Pierce County (according to the Wisconsin Confidential Birth Reports as entered in the Wisconsin Immunization Registry by the state) who turned three months of age by December 1, 2006, 2) CASA or Wisconsin Immunization Registry generated documentation of the number of those infants who received 1 DTaP, 1 Polio, 1 Hib and 1 HepB vaccine by four months of age, and 3) the number of those children noted as moved or going elsewhere and those marked as non-responders.

Programs Providing Funds for this Objective

Immunization: \$9,473

Agency Funds for this Objective:

Data Source for Measurement

Wisconsin Immunization Registry records.

Baseline for Measurement

Mr. Flynn of the State Immunization Program ran a CASA extract from the Wisconsin Immunization Registry using September 29, 2005 for the common review date with the assessment range of 12-24 months of age. Looking at the 1 DTaP, 1 Polio, 1 Hib and 1 HepB series for three-month olds, our baseline showed a coverage rate of 73.4%.

Context

The cohort of infants to be analyzed for this objective will be those infants born during the period October 1, 2005 through August 30, 2006 who are entered into the Wisconsin Immunization Registry from the Wisconsin Confidential Birth Reports by the state of Wisconsin. Infants will be assessed for having at least 1 DTaP, 1 Polio, 1 Hib and 1 HepB vaccine by four months of age. Only infants who have moved out of the agency's jurisdiction (MOGE) or have failed to respond to three reminder/recall attempts or their mail has been returned undeliverable may be removed from the cohort for analysis. The goal of this objective is to help identify patient and system level barriers that place children at risk of not completing their primary series of immunization on schedule. Access to primary and preventive health services is one of the priorities identified in Wisconsin's State Health Plan, Healthiest People 2010: A Partnership Plan to Improve the Health of the Public. Children who begin their community-based immunizations by three months of age are more likely to complete the primary series of 4 DTaP, 3 Polio, 1 MMR, 3 Hib, 3 HepB and 1 Varicella by 24 months of age. This objective also addresses the Healthy People 2010: 14-26 goal to "Increase the proportion of children who participate in fully operational population-based immunization registries" by identifying local gaps in Wisconsin Immunization Registry.

Input Activities

Pierce County Public Health Department staff will add immunization reminders to the "birth packets" mailed to Pierce County parents, contact parents of infants without immunization histories, perform reminder/recall and follow-up interventions to complete series, track and share information with area physicians and request that information is entered into the Wisconsin Immunization Registry in a timely manner.

Program: Immunization

Agency: Polk County Health Department
Objective #: 1 of 1

Contract Year: 2006
Objective Value: \$12,358

Objective: Primary Details

Objective Statement

By December 31, 2006, 55% of Polk County children who will be 24-35 months of age on December 31, 2006 will complete their primary immunizations by 24 months of age.

Deliverable Due Date: 01/31/2007

Contract Deliverable (Evidence)

CASA report for Polk County showing immunization rates for children 24-35 months of age as of December 31, 2006.

Programs Providing Funds for this Objective

Immunization: \$12,358

Agency Funds for this Objective:

Data Source for Measurement

CASA reports on 2006 immunization status of Polk County children. Wisconsin Immunization Registry documentation from all three medical clinics.

Baseline for Measurement

2005 baseline data for 4 DTaP, 3 polio, 1 MMR, 3 Hib, 3 HepB and 1 Varicella is 43%.

Context

Children will be assessed for 4 DTaP, 3 polio, 1 MMR, 3 Hib, 3 HepB and 1 Varicella. Polk County Health Department is serving a decreased number of children with immunizations due to the private sector assuming this role. Three medical clinics exist in the county. One clinic uses the Wisconsin Immunization Registry (WIR), well one sporadically and one not at all. It is currently difficult to adequately assess the childhood immunization levels of Polk County children due to insufficient data in WIR. There has been no coordinated effort previously in Polk County to address childhood immunization issues among immunization providers.

Input Activities

Polk County Health Department will convene representatives of the three medical clinics to assess barriers to immunization in Polk County. This group will be recognized as a county immunization task force. Discussion will focus on provider use of the Wisconsin Immunization Registry (WIR), use of state-supplied vaccine, knowledge of the ACIP recommended childhood vaccination schedule and issues around childhood immunization. This task force will assess the current levels of immunization in Polk County children and establish benchmarks to reach immunization goals for age groups of children. In addition, strategies will be developed to reduce barriers to immunizing children in a variety of healthcare settings, as well as to assure all private medical clinics are using the WIR effectively.

Contract #: 13728

Agency: Portage County Health & Human Services Department

Contract Year: 2006

Program: Immunization

Objective #: 1 of 1

Objective Value: \$17,867

Objective: Primary Details

Objective Statement

By December 31, 2006, 85% of Portage County residents who will be 24-36 months of age on December 31, 2006 will complete their primary immunizations by 24 months of age.

Deliverable Due Date: 01/31/2007

Contract Deliverable (Evidence)

A report to include documentation on the number of Portage County residents who were 24-35 months of age on December 31, 2006, and the number of those children who completed their primary immunizations by 24 months of age. Primary series specified as 4 DTap, 3 polio, 1 MMR, 3 Hib, 3 HepB, and 1 Varicella.

Programs Providing Funds for this Objective

Immunization: \$17,867

Agency Funds for this Objective:

Data Source for Measurement

A CASA done through RECIN after October 1, 2006.

Baseline for Measurement

Results of a CASA done in September of 2005 indicate that 90% of children were up-to-date at 12 months, but the rate dropped to 79% for children between the ages of 24-36 months of age. Portage County Health and Human Services Department is currently facilitating recall letters for Rice Medical Pediatrics, our largest provider.

Context

All hospitals in Portage, Wood, and Marathon Counties administer HepB at birth and enter this immunization into Regional Early Childhood Immunization Network (RECIN). Because Portage County infants (births) are entered into RECIN, tiered interventions and CASA assessments done through RECIN are representative of the eligible infants in Portage County. Over the last 3 years, Portage County Health Department has worked with all pediatricians and family practice MDs to implement RECIN and tiered intervention. This has resulted in at least 90% of infants achieving the 2010 goal of complete immunization series by age 24 months. Children will be assessed for their completion of 4 DTap, 3 polio, 1 MMR, 3 Hib, 3 HepB and 1 Varicella immunization series by 24 months of age. RECIN will be used to determine a population based immunization assessment for children 24-35 months of age as of December 31, 2006.

Input Activities

Portage County Health and Human Services (PCHHS) will continue tiered intervention. PCHHS will continue to monitor community provider participation in tiered intervention on a regular basis and facilitate problem solving with any provider that may want to discontinue this practice.

Immunization: \$3,447

Agency Funds for this Objective:

Data Source for Measurement

Forest County Potawatomi Immunization Program's records and CASA Summary Report of late up-to-date immunizations by 35 months of age.

Baseline for Measurement

A CASA Summary Report ran on April 4, 2005 indicates that 24 children ranging from 24-35 months of age are enrolled in the Forest County Potawatomi Immunization Program. Of this age group, 87.5% had received age-appropriate immunizations.

Context

Children will be assessed for their completion of the 4 DTaP, 3 polio, 1 MMR, 3 Hib, 3 HepB immunization series by 35 months of age. The estimate is there are 24 children in this cohort of patients.

Input Activities

Recall/reminders through mail and telephone calls to parents and guardians. Home and office visits to administer immunizations. Data entry into the Wisconsin Immunization Registry. Conduct CASA assessment.

Contract #: 13729
Program: Immunization

Agency: Price County Health Department
Objective #: 1 of 1

Contract Year: 2006
Objective Value: \$6,656

Objective: Primary Details

Objective Statement

By December 31, 2006, 83% of children residing in the jurisdiction of the Price County Health Department who turn 19 months of age during 2006 will have their 4th dose of DTaP.

Deliverable Due Date: 01/31/2007

Contract Deliverable (Evidence)

A report to summarize a statistically valid survey that provides: 1) the total number of children residing in Price County who turned 19 months of age in 2006, 2) CASA or Wisconsin Immunization Registry generated documentation of the number of those children who have their 4th dose of DTaP, and 3) the number of those children noted as moved or going elsewhere and those marked as non-responders.

Programs Providing Funds for this Objective

Immunization: \$6,656

Agency Funds for this Objective:

Data Source for Measurement

Wisconsin Immunization Registry records.

Baseline for Measurement

A CASA extract from the Wisconsin Immunization Registry shows a coverage for 19 month old children of 79% for the 4th DTaP. The cohort (baseline) reviewed was 138 children.

Context

Children who will turn 19 months of age during the contract year 2006 will be assessed for receipt of the 4th dose of DTaP. Only children who have moved out of the agency's jurisdiction (MOGE) or have failed to respond to three reminder/recall attempts or their mail has been returned undeliverable may be removed from the cohort for analysis.

Input Activities

The Price County Health Department will provide information to clinic providers regarding the immunization schedule. The Health Department will supply clinic staff with all current immunization information and updates, will offer Wisconsin Immunization Registry assistance and be available for technical assistance either by phone or actual on-site visits.

Contract #: 13675
Program: Immunization

Agency: Quality Criteria
Objective #: 1 of 2

Contract Year: 2006
Objective Value: \$0

Objective: Primary Details

Objective Statement

During the contract period, 85% of infants born in (insert name) County who turn three months of age in 2006 will receive 1 DTaP, 1 Polio, 1 Hib and 1 HepB vaccine by four months of age.

Deliverable Due Date: 01/31/2007

Contract Deliverable (Evidence)

A report to summarize a statistically valid survey that provides: 1) the total number of children born in (insert name of jurisdiction) who turned three months of age in 2006, 2) CASA or Wisconsin Immunization Registry generated documentation of the number of those children who received 1 DTaP, 1 Polio, 1 Hib and 1 HepB vaccine by four months of age, and 3) the number of those children noted as moved or going elsewhere and those marked as non-responders.

Programs Providing Funds for this Objective

Agency Funds for this Objective:

Data Source for Measurement

Wisconsin Immunization Registry records.

Baseline for Measurement

Context

The cohort of children to be analyzed for this objective will be those children born during the period October 1, 2005 through September 30, 2006. The goal of this objective is to help identify patient and system level barriers that place children at risk of not completing their primary series of immunization on schedule. Access to primary and preventive health services is one of the priorities identified in Wisconsin's State Health Plan, Healthiest People 2010: A Partnership Plan to Improve the Health of the Public. Children who begin their community-based immunizations by three months of age are more likely to complete the primary series of 4 DTaP, 3 Polio, 1 MMR, 3 Hib, 3 HepB and 1 Varicella by 24 months of age. This objective also addresses the Healthy People 2010: 14-26 goal to increase the proportion of children who participate in fully operational population-based immunization registries by identifying local gaps in Wisconsin Immunization Registry. Children will be assessed for having at least 1 DTaP, 1 Polio, 1 Hib and 1 HepB vaccine by four months of age. Only children who have moved out of the agency's jurisdiction (MOGE) or have failed to respond to three reminder/recall attempts or their mail has been returned undeliverable may be removed from the cohort for analysis.

Contract #: 13762
Program: Immunization

Agency: Racine City Health Department
Objective #: 1 of 2

Contract Year: 2006
Objective Value: \$24,141

Objective: Primary Details

Objective Statement

By December 31, 2006, 82% of children served by the Racine City Health Department Immunization Program who will be 24-35 months of age on December 31, 2006 will complete their primary immunizations by 24 months of age.

Deliverable Due Date: 01/31/2007

Contract Deliverable (Evidence)

A report to include documentation of the numbers of children served by the Racine City Health Department Immunization Program who were 24-35 months of age as of December 31, 2006, and the number of those children who completed their primary immunizations by 24 months of age.

Programs Providing Funds for this Objective

Immunization: \$24,141

Agency Funds for this Objective:

Data Source for Measurement

Agency records and CASA Summary Report of up-to-date immunizations by 24 months of age.

Baseline for Measurement

The rate as of August 31, 2005 is 77.9%.

Context

Children will be assessed for their completion of the 4 DTaP, 3 Polio, 1 MMR, 3 Hib, 3 HepB, and 1 Varicella immunization series by 24 months of age. The estimate is there are 275 children in this cohort of patients.

Input Activities

The Health Department will continue to target the under-vaccinated, high-risk children who will be 24-35 months of age during the calendar year 2006. An evening immunization clinic is held weekly. A Spanish interpreter is available at all immunization clinics. Continue to teach parents the importance of timely immunizations. A copy of the child's current immunization record and a return date will be provided for the parent at each visit. Postcards will be sent and phone calls made to parents of children in need of immunizations.

Objective Statement

By December 31, 2006, 72% of children enrolled in the Racine City Health Department WIC Project who will be 24-35 months of age as of December 31, 2006 and are assessed as not fully immunized will receive all appropriate immunizations.

Deliverable Due Date: 01/31/2007

Contract Deliverable (Evidence)

A report to include documentation of the number of children enrolled in the Racine City Health Department WIC Project who were 24-35 months of age as of December 31, 2006, those assessed as not fully immunized, and those who received all appropriate immunizations.

Programs Providing Funds for this Objective

Immunization: \$20,000

Agency Funds for this Objective:

Data Source for Measurement

Agency records, CASA, WIC reports.

Baseline for Measurement

As of August 31, 2005, 72.9% of the WIC clients who were assessed as not up-to-date with their immunizations are now in compliance.

Context

Children will be assessed for their completion or progress of completion of the 4 DTaP, 3 Polio, 1 MMR, 3 Hib, 3 HepB, 1 Varicella immunization series by 24 months of age. The estimate is there are 500 children in this cohort of children.

Input Activities

The Health Department will continue to target high-risk children to improve immunization levels. Parents will be encouraged to bring their child's immunization record to each WIC appointment. The WIC client immunization records will be entered into the Wisconsin Immunization Registry. The Health Department will educate parents on the importance of timely immunizations. Immunizations will be offered during WIC appointment times. Postcards will be sent and phone calls made to parents of children in need of immunizations.

Objective #: 1 of 2

Contract Year: 2006
Objective Value: \$2,061

Objective: Primary Details

Objective Statement

By September 30, 2006, 60% of children enrolled in the Red Cliff Women, Infants and Children Program who will be 24-35 months as of December 31, 2006, will complete their primary immunizations by 24 months of age.

Deliverable Due Date: 10/31/2006

Contract Deliverable (Evidence)

A report to include documentation of all children enrolled in the Red Cliff Women, Infants and Children Program who will be 24-35 months as of December 31, 2006, and the number of those children who completed their primary immunizations by 24 months of age.

Programs Providing Funds for this Objective

Immunization: \$2,061

Agency Funds for this Objective:

Data Source for Measurement

Baseline for Measurement

According to RPMS (Resource Patient Management System), the current immunization rate for children 24-35 months is 100%. In 2004, the Wisconsin Immunization Assessment Summary and agency reports showed that 70% of WIC children 12-35 months of age received age-appropriate immunizations.

Context

Input Activities

1)Monthly reminder notices will be sent out from the WIR database reminding families that children 0-35 months are due for vaccinations. 2)Twice-monthly, chart audits for age-appropriate vaccinations will take place before WIC clinics. 3)All WIC children 0-35 months will be offered immunizations at WIC clinics. 4) Monthly immunization clinics will be offered. 5) Clinic staff will allow flexibility for walk-in appointments for immunizations. 6) Articles on the importance of vaccination will be run in the Red Cliff News bi-monthly. 7)Staff education on importance of birth-dose Hepatitis B will be established through reminders and educational handouts on CDC and ACIP recommendations for vaccination. 8) All providers will be given updated, laminated Immunization guidelines for reference in all exam rooms and in offices. 9) Immunization coordinator will attend trainings related to new immunization recommendations, yearly. 10) Immunization data entry staff will attend one WIR training update yearly (when offered).

Contract #: 13735
Program: Immunization

Agency: Richland County Health Department
Objective #: 1 of 1

Contract Year: 2006
Objective Value: \$6,442

Objective: Primary Details

Objective Statement

By December 31, 2006, 83% of children served by the Richland County Health Department Immunization Program who will be 24 months of age as of December 31, 2006 will complete their primary immunizations by 24 months of age.

Deliverable Due Date: 01/31/2007

Contract Deliverable (Evidence)

A report to include documentation of the number of children served by the Richland County Health Department Immunization Program who were 24 months of age as of December 31, 2006, and the number of those children who completed their primary immunizations by 24 months of age.

Programs Providing Funds for this Objective

Immunization: \$6,442

Agency Funds for this Objective:

Data Source for Measurement

Agency records and CASA Summary Report of immunizations by 24 months of age.

Baseline for Measurement

Number of children who complete their primary series of immunizations by 24 months of age.

We followed 78 children in 2005.

Context

Children will be assessed for their completion of 4 DTaP, 3 polio, 1 MMR, 3 Hib, 3 HepB immunization series by 24 months of age.

Input Activities

The Richland County Health Department will provide monthly immunization clinics, including evening clinics. We will establish a baseline for varicella via a CASA in 2006.

Contract #: 13736
Program: Immunization

Agency: Rock County Public Health Department
Objective #: 1 of 2

Contract Year: 2006
Objective Value: \$35,000

Objective: Primary Details

Objective Statement

By December 31, 2006, 83% of children residing in Rock County who turn 19 months of age during 2006 will have their 4th dose of DTaP.

Deliverable Due Date: 01/31/2007

Contract Deliverable (Evidence)

A report to summarize a statistically valid survey that provides: 1) the total number of children residing in Rock County who turned 19 months of age in 2006, 2) CASA or Wisconsin Immunization Registry generated documentation of the number of those children who have their 4th dose of DTaP, and 3) the number of those children noted as moved or going elsewhere and those marked as non-responders.

Programs Providing Funds for this Objective

Immunization: \$35,000

Agency Funds for this Objective:

Data Source for Measurement

Wisconsin Immunization Registry records.

Baseline for Measurement

Baseline data from CASAs done in 2005 shows that 75% of Beloit children 24 months of age had their 4th dose of DTaP, and for children in Rock County the percentage was 81%.

Context

Children who will turn 19 months of age during the contract year 2006 will be assessed for receipt of the 4th dose of DTaP. Only children who have moved out of the agency's jurisdiction (MOGE) or have failed to respond to three reminder/recall attempts or their mail has been returned undeliverable may be removed from the cohort for analysis.

Input Activities

This objective will be achieved through a system-based assessment incorporating surveillance, tracking and recall. Public service announcements and public awareness of the clinics will be done weekly.

Contract Objective Details - Complete

Contract #: 13736
Program: Immunization

Agency: Rock County Public Health Department
Objective #: 2 of 2

Contract Year: 2006
Objective Value: \$15,191

Objective: Primary Details

Objective Statement

By December 31, 2006, a strategic plan will be in place to implement community-wide interventions with the goal of improving immunization rates in Rock County to align with state and federal 2010 immunization goals.

Deliverable Due Date: 01/31/2007

Contract Deliverable (Evidence)

A report to include or document: 1) a copy of the strategic plan developed by the Rock County immunization network, 2) the number of strategies implemented, and 3) copies of the CASA reports of private provider assessments done to obtain baseline data.

Programs Providing Funds for this Objective

Immunization: \$15,191

Agency Funds for this Objective:

Data Source for Measurement

Agency records.

Baseline for Measurement

This is a new initiative so baseline data will be established during the contract period.

Context

For Rock County to work toward achieving the goals outlined in the Wisconsin State Health Plan, "Healthiest Wisconsin 2010," a strategic plan for population-based assessment, diagnosis and intervention that will address community needs will be developed and implemented.

Input Activities

Population-based assessments will be done at area providers to determine community needs, using both electronic data and chart review data where the immunization registry is not being utilized. Key partners in immunizing the residents of Rock County will be identified and brought together to establish a coalition or immunization task force.

The first task of the coalition will be the development of a strategic plan outlining tiered interventions and the use of reminder/recall and periodic telephone calls focused on population-based immunization improvements. Review of the data collected through the use of CASA and/or the Wisconsin Immunization Registry (WIR) will assist in determining the pockets of need throughout the county. Additionally, the Rock County Health Department will provide information regarding the WIR and its importance to private providers in the county in improving the available data obtained through population assessments. Additional emphasis will be placed on promoting timely data entry into WIR. Use of media promotion and collaboration with the WIC Program may be additional strategies used to improve access.

Program: Immunization

Agency: Sauk County Public Health Department
Objective #: 2 of 3

Contract Year: 2006
Objective Value: \$5,000

Objective: Primary Details

Objective Statement

By December 31, 2006, 85% of children who will be 12 months of age as of December 31, 2006 and use the Sauk County Health Department for childhood immunizations and received less than two doses of vaccine as indicated in the Wisconsin Immunization Registry will receive at least the 3 DTaP, 2 Polio, 2 Hib, and 2 Hepatitis B vaccines.

Deliverable Due Date: 01/31/2007

Contract Deliverable (Evidence)

A report to include: 1) the number of children who were 12 months of age as of December 31, 2006 and used the Sauk County Health Department for childhood immunizations, and 2) the number of those children who received at least the 3 DTaP, 2 Polio, 2 Hib, and 2 Hepatitis B vaccines.

Programs Providing Funds for this Objective

Immunization: \$5,000

Agency Funds for this Objective:

Data Source for Measurement

Wisconsin Immunization Registry records.

Baseline for Measurement

Data from Wisconsin Immunization Registry (WIR) via GIS mapping or Division of Public Health query. WIR data indicates that the Health Department is at less than 50% of coverage in the 3-12 month population. With just one more vaccine, in the cohort, the rate could have been brought up to 55%. Sauk County also has about a 50% drop-off rate in the 12-35 month olds.

Context

Children with less than two doses of vaccine between the ages of 4 months and 12 months are at risk of not completing the recommended infant immunization schedule by 24 months of age and are at risk of acquiring a vaccine preventable disease. The overall goal is to have the immunization series complete by 24 months of age. Using DTaP vaccine as an indicator will assist the Health Department in identifying children who are at greatest need of access to primary health care. Only children who have moved out of the local health department's jurisdiction or are going to another health care provider can be removed for the selected cohort for analysis.

Input Activities

Reminder recall, targeted outreach through phone calls, mailings and determining if there are other providers not associated with the Wisconsin Immunization Registry who have provided immunizations.

Objective Statement

By December 31, 2006, 75% of the children who use the Sauk County Health Department for childhood immunizations and will be 24 to 35 months as of December 31, 2006 will complete their primary immunizations by 24 months of age.

Deliverable Due Date: 01/31/2007

Contract Deliverable (Evidence)

A report to include documentation of the number of children using the Sauk County Health Department for childhood immunizations who were 24 to 35 months of age as of December 31, 2006, the immunization status of those children and the number of children who completed their primary immunizations by 24 months of age that are entered into the Wisconsin Immunization Registry.

Programs Providing Funds for this Objective

Immunization: \$5,624

Agency Funds for this Objective:

Data Source for Measurement

CASA Summary Report of late-up-to-date immunizations by 24 months of age. Wisconsin Immunization Registry records.

Baseline for Measurement

The estimate is that there are 200 children in this cohort. A CASA report prepared on September 28, 2005 showed that 62% of the children 24-35 months of age completed their primary immunizations (4 DTaP, 3 Polio, 1 MMR, 3 Hib, 3 HepB and 1 Varicella) by 24 months of age.

Context

Children will be assessed for their completion of the 4 DTaP, 3 Polio, 1 MMR, 3 Hib, 3 HepB and 1 Varicella. Note, a history of Varicella disease may be factored into the completion rate.

Input Activities

Reminder recall, targeted outreach through phone calls, mailings and determining if there are other providers not associated with the Wisconsin Immunization Registry who have provided immunizations.

Objective: Primary Details

Objective Statement

By December 31, 2006, 90% of students enrolled in grades K through 12 during the 2006-07 school year in the Tigerton and Bowler School Districts will provide documentation of immunity to varicella, either through disease history or vaccine.

Deliverable Due Date: 01/31/2007

Contract Deliverable (Evidence)

A report to include documentation by the Tigerton and Bowler School Districts of the number of students enrolled in grades K through 12 during the 2006-07 school year, and the number of those students who have documentation of immunity to varicella.

Programs Providing Funds for this Objective

Immunization: \$3,472

Agency Funds for this Objective:

Data Source for Measurement

Agency records or school reports to the local public health department.

Baseline for Measurement

The 2004-2005 school enrollment number is 850 for the Tigerton and Bowler school districts.

Context

For the 2006-07 school year, the varicella vaccine requirement of the Wisconsin Student Immunization Law will expand to include a requirement that students in grades K through 12 be immunized with varicella vaccine or have a history of chicken pox disease. Schools may desire or need assistance in achieving the compliance rate of students based on the expanded requirement. Students who have waivers will not be considered as having documentation of immunity to varicella.

Input Activities

Clinics will be held to offer make-up immunizations. All immunizations will be recorded in the Wisconsin Immunization Registry.

Objective #: 1 of 1

Objective Value: \$27,145

Objective: Primary Details

Objective Statement

By December 31, 2006, 78% of children residing in Sheboygan County who turn 19 months of age during 2006 will have their 4th dose of DTaP.

Deliverable Due Date: 01/31/2007

Contract Deliverable (Evidence)

A report to summarize a statistically valid survey that provides: 1) the total number of children residing in Sheboygan County who turned 19 months of age in 2006, 2) CASA or Wisconsin Immunization Registry generated documentation of the number of those children who have their 4th dose of DTaP, and 3) the number of those children noted as moved or going elsewhere and those marked as non-responders.

Programs Providing Funds for this Objective

Immunization: \$27,145

Agency Funds for this Objective:

Data Source for Measurement

Wisconsin Immunization Registry records.

Baseline for Measurement

The CASA report generated September 2005 indicates 79% of children with birthdates between May 2, 2002 and June 1, 2003 have had their 4th dose of DTaP.

Context

Children who will turn 19 months of age during the contract year 2006 will be assessed for receipt of the 4th dose of DTaP. Only children who have moved out of the agency's jurisdiction (MOGE) or have failed to respond to three reminder/recall attempts or their mail has been returned undeliverable may be removed from the cohort for analysis. There were 474 children in this cohort. It is anticipated that the continued migration to Sheboygan County by refugee and Hispanic populations may challenge the continued level of DTaP immunization of this cohort.

Input Activities

Immunizations will be provided on a walk-in and appointment basis. Tracking and recall letters and phone calls will be conducted using information from the Wisconsin Immunization Registry.

Program: Immunization

Agency: Sokaogon Tribe
Objective #: 1 of 1

Contract Year: 2006
Objective Value: \$3,468

Objective: Primary Details

Objective Statement

By September 30, 2006, 95% of Sokaogon Chippewa children served by the Sokaogon Chippewa Community Health Clinic who were 24-35 months of age as of September 30, 2006, will complete their primary immunizations by 35 months of age.

Deliverable Due Date: 10/31/2006

Contract Deliverable (Evidence)

A report to include documentation of the number of children served by the Sokaogon Chippewa Community Health Clinic who were 24-35 months of age as of September 20, 2006, and number of those children who completed their primary immunizations by 35 months of age.

Programs Providing Funds for this Objective

Immunization: \$3,468

Agency Funds for this Objective:

Data Source for Measurement

Agency records and CASA Summary Report of late-to-date immunizations by 35 months of age.

Baseline for Measurement

CASA report for the end of March, 2005 shows 100% of Sokaogon Chippewa children 12-35 months of age received age appropriate immunizations.

Context

Children will be assessed for their completion of the 4 DTaP, 3 polio, 1 MMR, 3 Hib, 3 HepB immunization series by 35 months of age. The estimate is there are 17 children in this cohort of patients.

Input Activities

Conduct quarterly immunization awareness events held in the Sokaogon Chippewa community with the focus of emphasizing importance of having immunizations, then provide immunizations. Advertise in the Sokaogon Chippewa Community News. Participate in other Sokaogon Chippewa community events emphasizing the importance of infants and children receiving immunizations. Educate parents and immunize infants and children during WIC clinics, primary care visits, and well infant and child medical examinations. Conduct tracking and recall activities. Enter data of each individual's immunization information into the Wisconsin Immunization Registry.

Contract #: 13776
Program: Immunization

Agency: South Milwaukee Health Department
Objective #: 1 of 1

Contract Year: 2006
Objective Value: \$5,287

Objective: Primary Details

Objective Statement

During the contract period, 85% of infants born in the city of South Milwaukee who turn three months of age in 2006 will receive 1 DTaP, 1 Polio, 1 Hib and 1 HepB vaccine by four months of age.

Deliverable Due Date: 01/31/2007

Contract Deliverable (Evidence)

A report to summarize a statistically valid survey that provides: 1) the total number of children born in the city of South Milwaukee who turned three months of age in 2006, 2) CASA or Wisconsin Immunization Registry generated documentation of the number of those children who received 1 DTaP, 1 Polio, 1 Hib and 1 HepB vaccine by four months of age, and 3) the number of those children noted as moved or going elsewhere and those marked as non-responders.

Programs Providing Funds for this Objective

Immunization: \$5,287

Agency Funds for this Objective:

Data Source for Measurement

Wisconsin Immunization Registry records.

Baseline for Measurement

New program will establish baseline this contract year. There are approximately 230 births within the city of South Milwaukee annually.

Context

The cohort of children to be analyzed for this objective will be those children born during the period October 1, 2005 through September 30, 2006. Children will be assessed for having at least 1 DTaP, 1 Polio, 1 Hib and 1 HepB vaccine by four months of age. Only children who have moved out of the agency's jurisdiction (MOGE) or have failed to respond to three reminder/recall attempts or their mail has been returned undeliverable may be removed from the cohort for analysis. The goal of this objective is to help identify patient and system level barriers that place children at risk of not completing their primary series of immunization on schedule. Access to primary and preventive health services is one of the priorities identified in Wisconsin's State Health Plan, Healthiest People 2010: A Partnership Plan to Improve the Health of the Public. Children who begin their community-based immunizations by three months of age are more likely to complete the primary series of 4 DTaP, 3 Polio, 1 MMR, 3 Hib, 3 HepB and 1 Varicella by 24 months of age. This objective also addresses the Healthy People 2010: 14-26 goal to "Increase the proportion of children who participate in fully operational population-based immunization registries" by identifying local gaps in Wisconsin Immunization Registry.

Input Activities

Demographic information will be kept for each child born between October 10, 2005 and September 30, 2006. Information will be obtained using the SPHERE birth records. All newborn visits will provide printed information regarding the immunization schedule. A Public Health Nurse will verbally inform the parent or caregiver of the importance of childhood immunizations and explain the immunization schedule. All households of newborns will receive a follow-up reminding them of immunizations that are required and a request for the immunization dates will be made. Once dates are received they will be kept on record.

Agency: St Croix County Department of Health & Human Services

Contract Year: 2006

Program: Immunization

Objective #: 1 of 1

Objective Value: \$15,532

Objective: Primary Details

Objective Statement

By December 31, 2006, 60% of children residing in St. Croix County who turn 19 months of age during 2006 will have their 4th dose of DTaP.

Deliverable Due Date: 01/31/2007

Contract Deliverable (Evidence)

A report to summarize a statistically valid survey that provides: 1) the total number of children residing in St. Croix County who turned 19 months of age in 2006, 2) CASA or Wisconsin Immunization Registry generated documentation of the number of those children who have their 4th dose of DTaP, and 3) the number of those children noted as moved or going elsewhere and those marked as non-responders.

Programs Providing Funds for this Objective

Immunization: \$15,532

Agency Funds for this Objective:

Data Source for Measurement

Wisconsin Immunization Registry records.

Baseline for Measurement

A CASA extract from the Wisconsin Immunization Registry using September 19, 2005 for a common review date with an assessment range of 12-24 months of age indicates a coverage rate for children 19 months of age to be 53%.

Context

Children who will turn 19 months of age during the contract year 2006 will be assessed for receipt of the 4th dose of DTaP. Only children who have moved out of the agency's jurisdiction (MOGE) or have failed to respond to three reminder/recall attempts or their mail has been returned undeliverable may be removed from the cohort for analysis.

Input Activities

St. Croix County Health Department will initiate an immunization outreach and/or education campaign directed at private health care providers, parents, and day care providers.

Contract Year: 2006
Objective Value: \$3,965

Objective: Primary Details

Objective Statement

By September 30, 2006, 90% of American Indian children served by the St. Croix Tribal Health Department Immunization Program who were ages 12-35 months as of October 1, 2005 will receive age specific immunizations.

Deliverable Due Date: 10/31/2006

Contract Deliverable (Evidence)

A summary report that will include the quarterly immunization reports submitted to Indian Health Services.

Programs Providing Funds for this Objective

Immunization: \$3,965

Agency Funds for this Objective:

Data Source for Measurement

Wisconsin Immunization Registry and Resource and Patient Management System, clinic charts, and tribal immunization card system.

Baseline for Measurement

Previous years data of 2004 and 2005 has shown 90% of children served in targeted age range received age specific immunizations.

Context

St. Croix Tribal Health Department Immunization Program will maintain 90% immunization rates for targeted children. The Wisconsin Immunization Registry will be utilized for documentation and tracking of immunization reports, along with the Resource and Patient Management System immunization package of the St. Croix Tribal Health Department.

Input Activities

Through the provision of providing immunization services during the WIC visits to the St. Croix Tribal Health Department, the targeted children will receive immunizations. Appointments will also be arranged for other dates for children to follow-up for next immunization dates.

Contract #: 13743

Agency: Taylor County Health Department

Contract Year: 2006

Program: Immunization

Objective #: 1 of 1

Objective Value: \$7,598

Objective: Primary Details

Objective Statement

By December 31, 2006, 80% of children residing in Taylor County who turn 19 months of age during 2006 will have their 4th dose of DTaP.

Deliverable Due Date: 01/31/2007

Contract Deliverable (Evidence)

A report to summarize a statistically valid survey that provides: 1) the total number of children residing in Taylor County who turned 19 months of age in 2006, 2) CASA or Wisconsin Immunization Registry generated documentation of the number of those children who have their 4th dose of DTaP, and 3) the number of those children noted as moved or going elsewhere and those marked as non-responders.

Programs Providing Funds for this Objective

Immunization: \$7,598

Agency Funds for this Objective:

Data Source for Measurement

Wisconsin Immunization Registry records.

Baseline for Measurement

On September 1, 2005, I ran two assessments for Taylor County children utilizing the Wisconsin Immunization Registry and CASA assessment. The first report was for children 12-35 months of age as of September 1, 2005. Children who had their 4th DTaP at 19 months of age were at 78.62%. The second assessment run was for 15-19 months of age. Compliance for 4th DTaP at 15 months of age was 25% and at 19 months of age 63%. This is the reason for the goal of 75%.

Context

Children who will turn 19 months of age during the contract year 2006 will be assessed for receipt of the 4th dose of DTaP. Only children who have moved out of the agency's jurisdiction (MOGE) or have failed to respond to three reminder/recall attempts or their mail has been returned undeliverable may be removed from the cohort for analysis.

Input Activities

The Taylor County Health Department is the only provider at this time who does recall letters to clients for immunizations. We assess utilizing RECIN and the Wisconsin Immunization Registry database. The other provider, Memorial Health Center Clinic has 3 clinic sites in Taylor County. At this time, they do not complete all immunizations by 12 months of age. They have children return at 15-18 months of age to complete their series. The issue is that most insurance plans will not pay for a well-child screen and therefore parents may not return at 15-18 months of age. This in turn means their child is behind on immunizations and may not be aware of it without a recall system. The Health Department plans to assist Memorial Health Center clinics with evaluation of immunizations and recall system to have children up to date with their 4th DTaP by 19 months of age and will hopefully also have them complete by age 2. This will be an infrastructure building objective for Taylor County. This is why we are putting all our monies into this objective.

Immunization: \$6,000

Agency Funds for this Objective:

Data Source for Measurement

Agency records and CASA Summary Report of up-to-date and late-up-to-date immunizations by 24 months of age.

Baseline for Measurement

As of August 2005, the CASA report indicates 58% of children immunized by Vernon County Health Department received age appropriate immunizations, including varicella. The cohort for 2005 is 86 children.

Context

Children will be assessed for their completion of the 4 DTaP, 3 polio, 1 MMR, 3 Hib, 3 HepB and 1 varicella immunization series by 24 months of age.

Input Activities

Clinics are held monthly at two different sites in the county. Reminders/recalls are sent to all families whose children need further immunizations.

Contract #: 13745
Program: Immunization

Agency: Vernon County Health Department
Objective #: 2 of 2

Contract Year: 2006
Objective Value: \$3,349

Objective: Primary Details

Objective Statement

By December 31, 2006, 95% of Vernon County Amish families with children born in 2006 will be provided outreach and education on the importance of childhood and adult immunizations and provided vaccines to those who will accept them.

Deliverable Due Date: 01/31/2007

Contract Deliverable (Evidence)

A report to document the number of Vernon County Amish families with children born in 2006, the number who received immunization-related outreach services and the number of families receiving immunization services, age of recipient and type of vaccine administered by Vernon County Health Department.

Programs Providing Funds for this Objective

Immunization: \$3,349

Agency Funds for this Objective:

Data Source for Measurement

Number of birth records compared to the number of outreach packets sent and number of families outreached.

Baseline for Measurement

To date, there have been 76 home or clinic births in 2005; and of these births, 67 were Amish. All of the home and clinic births have were outreached. In addition, there have been 8 hospital births, and all were outreached and provided with education on the importance of immunizations.

Context

Promote immunization use among the Amish population to eliminate vaccine preventable diseases, based on birth records provided by the State of Wisconsin.

Input Activities

Amish families will be outreached to promote immunizations and vaccines provided to those infants and family members who are willing to accept them. The increase in cost of transportation for the Amish population may serve as a barrier for families to come to public clinics or the Health Department and because of this, the Health Department could provide services in the home.

Contract #: 13746
Program: Immunization

Agency: Vilas County Health Department
Objective #: 1 of 1

Contract Year: 2006
Objective Value: \$7,025

Objective: Primary Details

Objective Statement

By December 31, 2006, 75% of children residing in Vilas County who turn 19 months of age during 2006 will have their 4th dose of DTaP.

Deliverable Due Date: 01/31/2007

Contract Deliverable (Evidence)

A report to summarize a statistically valid survey that provides: 1) the total number of children residing in Vilas County who turned 19 months of age in 2006, 2) CASA or Wisconsin Immunization Registry generated documentation of the number of those children who have their 4th dose of DTaP, and 3) the number of those children noted as moved or going elsewhere and those marked as non-responders.

Programs Providing Funds for this Objective

Immunization: \$7,025

Agency Funds for this Objective:

Data Source for Measurement

Wisconsin Immunization Registry records.

Baseline for Measurement

Current Vilas County data indicates that only 66.7% of Vilas County 19 month olds have received their 4th dose of DTaP.

Context

Children who will turn 19 months of age during the contract year 2006 will be assessed for receipt of the 4th dose of DTaP. Only children who have moved out of the agency's jurisdiction (MOGE) or have failed to respond to three reminder/recall attempts or their mail has been returned undeliverable may be removed from the cohort for analysis.

Input Activities

Monthly assessment of DTaP status of Vilas County 19 month olds. Monthly recall/reminder attempts through letters, telephone calls, or face-to-face meetings. Outreach activities and extra clinics will be held if needed.

Contract #: 13747

Agency: Walworth County Health Department

Contract Year: 2006

Program: Immunization

Objective #: 1 of 2

Objective Value: \$12,548

Objective: Primary Details

Objective Statement

During the contract period, 75% of infants born in Walworth County who turn three months of age in 2006 will receive 1 DTaP, 1 Polio, 1 Hib and 1 HepB vaccine by four months of age.

Deliverable Due Date: 01/31/2007

Contract Deliverable (Evidence)

A report to summarize a statistically valid survey that provides: 1) the total number of children born in Walworth County who turned three months of age in 2006, 2) CASA or Wisconsin Immunization Registry generated documentation of the number of those children who received 1 DTaP, 1 Polio, 1 Hib and 1 HepB vaccine by four months of age, and 3) the number of those children noted as moved or going elsewhere and those marked as non-responders.

Programs Providing Funds for this Objective

Immunization: \$12,548

Agency Funds for this Objective:

Data Source for Measurement

Wisconsin Immunization Registry records.

Baseline for Measurement

This is a new goal for 2006. According to the Wisconsin Immunization Registry Assessment Summary as of September 21, 2005, 85% of children had received 1 DTaP, 1 Polio, 1 Hib and 1 HepB vaccine by three months of age.

Context

The cohort of children to be analyzed for this objective will be those children born during the period October 1, 2005 through September 30, 2006. Children will be assessed for having at least 1 DTaP, 1 Polio, 1 Hib and 1 HepB vaccine by four months of age. Only children who have moved out of the agency's jurisdiction (MOGE) or have failed to respond to three reminder/recall attempts or their mail has been returned undeliverable may be removed from the cohort for analysis. The goal of this objective is to help identify patient and system level barriers that place children at risk of not completing their primary series of immunization on schedule. Access to primary and preventive health services is one of the priorities identified in Wisconsin's State Health Plan, Healthiest People 2010: A Partnership Plan to Improve the Health of the Public. Children who begin their community-based immunizations by three months of age are more likely to complete the primary series of 4 DTaP, 3 Polio, 1 MMR, 3 Hib, 3 HepB and 1 Varicella by 24 months of age. This objective also addresses the Healthy People 2010: 14-26 goal to "Increase the proportion of children who participate in fully operational population-based immunization registries" by identifying local gaps in Wisconsin Immunization Registry. There are four clinics in Walworth County who are not using the Wisconsin Immunization Registry, therefore a gap exists in registry data.

Input Activities

All parents of children born in Walworth County receive a newborn baby letter which includes information on the importance of immunizing children and the Walworth County Public Health immunization schedule. Children will receive recall and reminder letters at three months of age if they have not received their first set of immunizations. Public Health offers education opportunities to local physician offices and work with them to immunize children on time. Walworth County Public Health will attempt to solicit the records for the Wisconsin Immunization Registry and promote Registry use by the clinics. Also, an Illinois border county will be contacted for records.

Objective Statement

By December 31, 2006, Hispanic residents of Walworth County will have access to Public Health immunization services staffed with interpreters at 42 clinics per year.

Deliverable Due Date: 01/31/2007

Contract Deliverable (Evidence)

A report with documentation of the number of clinics that interpreter services were available throughout the year.

Programs Providing Funds for this Objective

Immunization: \$9,807

Agency Funds for this Objective:

Data Source for Measurement

An agency generated report that documents clinic activities and the interpreter schedule.

Baseline for Measurement

In 2004-2005, interpreters were scheduled at all clinic sites.

Context

Walworth County has a large Spanish-speaking population. In order for that population to have adequate protection against vaccine preventable diseases, increased bilingual services must be provided in order to remove barriers to immunizations.

Input Activities

Two interpreters per clinic will be scheduled to cover clinic registration and nursing services.

Contract #: 13748

Agency: Washburn County Health and Human Services Department

Contract Year: 2006

Program: Immunization

Objective #: 1 of 1

Objective Value: \$5,191

Objective: Primary Details

Objective Statement

During the contract period, 80% of infants who reside in Washburn County and turn three months of age between January 1, 2006 and December 1, 2006 will receive 1 DTaP, 1 Polio, 1 Hib, and 1 HepB vaccination by four months of age.

Deliverable Due Date: 01/31/2007

Contract Deliverable (Evidence)

A report to summarize a statistically valid survey that provides: 1) the total number of children born in Washburn County who turned 3 months of age by December 1, 2006. 2) CASA, RECIN or Wisconsin Immunization Registry generated documentation of the number of those infants who received 1 DTaP 1 Polio, 1 Hib and 1 HepB vaccine by four months of age, and 3) the number of those children noted as moved or going elsewhere and those marked as non-responders.

Programs Providing Funds for this Objective

Immunization: \$5,191

Agency Funds for this Objective:

Data Source for Measurement

Wisconsin Immunization Registry and RECIN.

Baseline for Measurement

This is a new objective. The CASA extract from the Wisconsin Immunization Registry for Washburn County using September 19, 2005 for the common review date with the assessment range of 12-24 months of age. The cohort received was 47 children.

Coverage rate for children 19 months was 69%.

Context

The cohort of infants to be analyzed for this objective will be those infants born during the period October 1, 2005 through August 30, 2006 and are entered into the Wisconsin Immunization Registry from the confidential Birth Reports by the State of Wisconsin. Infants will be assessed for having 1 DTaP, 1 Polio, 1 HIB and 1 HepB vaccination by age four months. Infants who have moved out of the county or have failed to respond to two reminder/recall attempts or their mail has been returned undeliverable may be removed from the cohort list. The goal of this initiative is to identify patient and system barriers that put children at risk for not receiving their initial series of immunizations.

Input Activities

Washburn County Health Department will send an immunization reminder in the "Birth Packets" mailed to every Washburn County parent, contact parents of children without immunization histories, do reminder/recall and follow-up interventions to complete the series, track and share information with area clinics and request that information is entered into the Wisconsin Immunization Registry in a timely manner.

Program: Immunization

Agency: Washington County Health Department
Objective #: 1 of 1

Contract Year: 2006
Objective Value: \$23,810

Objective: Primary Details

Objective Statement

By December 31, 2006, 86% of children served by the Washington County Health Department Immunization Program who will be 24-35 months of age on December 31, 2006 will complete their primary immunizations by 24 months of age.

Deliverable Due Date: 01/31/2007

Contract Deliverable (Evidence)

A report to include documentation of the number of children served by the Washington County Health Department Immunization Program who were 24-35 months of age as of December 31, 2006 and the number of those children who completed their primary immunizations by 24 months of age.

Programs Providing Funds for this Objective

Immunization: \$23,810

Agency Funds for this Objective:

Data Source for Measurement

Agency records and CASA Summary Report of up-to-date immunizations by 24 months of age.

Baseline for Measurement

2004 baseline cohort for number of children 12-35 months of age is 479. 2005 baseline cohort CASA Summary dated March 24, 2005 for number of children 12-35 months of age is 416.

Context

Children will be assessed for their completion of the 4 DTaP, 3 polio, 1 MMR, 3 Hib, 3 HepB, 1 varicella immunization series by 24 months of age.

Input Activities

Reminder recalls for late-up-to-date children not yet 35 months of age will be sent. CASA assessment on children 12-35 months with a common review date of January 1, 2006. Will use language line and appropriate written information for non-English speaking clients needing immunizations. Monthly notice of immunization clinics in local newspapers. Parents are routinely contacted by Health Department regarding immunization information and its importance. Regularly scheduled clinics with extended hours to meet parent needs. Translation services available. Routine reminder and recall. Promotion of the Wisconsin Immunization Registry (WIR) use by local health care providers will continue. Have one major provider in county not yet submitting to WIR. Information on immunizations will be included in all letters to new births in jurisdiction. Plan to add WIC clients (high risk target group) to agency Lotus Notes Data Base System and develop report to track assessment of immunization status, immunization records in WIR, and refusals, lost to follow-up or moved. As data becomes available on WIR jurisdictional reports and the Health Department receives technical assistance, we will move towards population based focus on surveillance and follow-up of identified gaps in coverage. The Washington County Health Department will work with the Washington County Immunization Coalition to promote on-schedule immunization and WIR using informational flyers or Washington County Health Department representation at provider health fairs or staff inservices. The Immunization Coalition members represent all but one of the major healthcare providers in Washington County.

Agency: Watertown Department of Public Health
Objective #: 1 of 1

Contract Year: 2006
Objective Value: \$7,624

Objective: Primary Details

Objective Statement

By December 31, 2006, a strategic plan will be in place to implement community wide interventions with the goal of improving the immunization rates in Dodge County and the city of Watertown utilizing a multi-year approach.

Deliverable Due Date: 01/31/2007

Contract Deliverable (Evidence)

A copy of the strategic plan by which this objective will be implemented utilizing multi-year approach.

Programs Providing Funds for this Objective

Immunization: \$7,624

Agency Funds for this Objective:

Data Source for Measurement

CASA and Wisconsin Immunization Registry are the data sets that will be used to help establish the baseline data identify the goals of the strategic plan.

Baseline for Measurement

New objective.

Context

In order for Dodge County, including residents of the city of Watertown, to work toward achieving the goals outlined in the Wisconsin State Health Plan, "Healthiest Wisconsin 2010," a strategic plan needs to be developed and implemented utilizing a multi-year approach.

Input Activities

Population assessments will be done to the best of our ability based on available data. Key partners in immunizing the residents of Dodge County and the city of Watertown will be identified and brought together to establish a coalition. The first task of the coalition will be the development of a strategic plan utilizing a multi-year approach. Additionally, the coalition will provide information regarding the Wisconsin Immunization Registry and its importance in improving the available data obtained through population assessments. The coalition will address tiered interventions and the use of reminder/recall focused on population-based immunization improvements.

Contract Year: 2006
Objective Value: \$45,800

Objective: Primary Details

Objective Statement

By December 31, 2006, 81% of children served by the Waukesha County Public Health Division Immunization Program who were 12-35 months of age as of January 1, 2006 will complete their primary immunizations by 24 months of age.

Deliverable Due Date: 01/31/2007

Contract Deliverable (Evidence)

A report to include documentation of the number of children served by the Waukesha County Public Health Division Immunization Program who were 12-35 months of age as of January 1, 2006 and the number of those children who completed their primary immunizations by 24 months of age.

Programs Providing Funds for this Objective

Immunization: \$45,800

Agency Funds for this Objective:

Data Source for Measurement

Waukesha County Public Health Division records in the Wisconsin Immunization Registry; CASA assessment July 1, 2006 and January 1, 2007 for children who were 12-35 months of age as of January 1, 2006.

Baseline for Measurement

January 1, 2005 CASA assessment of children age 12-35 months demonstrated immunity level of 80%.

Context

Children ages 12-35 months will be assessed for the completion of the 4 DTaP, 3 polio, 1 MMR, 3 Hib, 3 HepB, 1 varicella immunization series by 24 months of age. The estimate is there are 866 children in the 12 to 35 month old cohort.

Input Activities

Continue with monthly tracking and recall of children 0-35 months of age to promote completion of primary series by 24 months and late up-to-date by 35 months. Continue to recommend varicella vaccine according to Advisory Committee on Immunization Practices schedule. Include in Wisconsin Immunization Registry (WIR) documentation parental refusal of varicella vaccine and disease history. Provide leadership and direction to the Immunization Coalition to promote immunizations through private and public partnerships. Explore use of new technologies and methods to assess community-based populations and identify high risk groups: utilization of Geographic Information Systems (GIS) mapping of communities with low immunization rates; identification of children behind in immunizations at three months of age; and replacing the biannual kindergarten retrospective review with a county-wide CASA audit utilizing immunization records of children currently 24 months of age from the WIR. Outreach children from the new Waukesha County Refugee Screening program to complete immunizations.

Contract Year: 2006
Objective Value: \$16,903

Objective: Primary Details

Objective Statement

By December 31, 2006, 72% of all children enrolled in the Waukesha County Public Health Division WIC Program who were 12-35 months of age as of January 1, 2006 will complete their primary immunizations by 24 months.

Deliverable Due Date: 01/31/2007

Contract Deliverable (Evidence)

A report to include documentation of those children enrolled in the Waukesha County Public Health Division WIC Program who were 12-35 months of age as of January 1, 2006, and those who completed their primary immunizations by 24 months.

Programs Providing Funds for this Objective

Immunization: \$16,903

Agency Funds for this Objective:

Data Source for Measurement

CASA Summary Report on July 1, 2006 and January 1, 2007 of children enrolled in WIC who were 12-35 months of age as of January 1, 2006.

Baseline for Measurement

Wisconsin WIC Program Immunization Tally Report dated December 29, 2004 indicates that 70% of children enrolled in WIC completed their primary series by age two. This does not include varicella vaccine. Baseline is not available for varicella vaccine.

Context

A random sample of children enrolled in the Waukesha County Public Health Division WIC Program who were 12-35 months of age as of January 1, 2006 will be assessed for the completion or progress for completion of the 4 DTaP, 3 polio, 1 MMR, 3 Hib, 3 HepB, 1 varicella immunization series by 24 months of age. The estimate is that there are 350 children in this cohort of children and a minimum of 200 children will be included in the sample.

Input Activities

A Public Health Nurse (PHN) is assigned to seven to eight Integrated WIC/Immunization Clinics per month. The PHN assesses the immunization status of and promotes immunizations for more than 80% of the children attending the clinic. The PHN offers immunizations on the day of the clinic visit to all children who are due for a vaccine. Immunization records are coordinated between the WIC Program and Immunization Program. The PHN obtains immunization records for WIC children from private providers. The records are entered into the Wisconsin Immunization Registry (WIR) and assessed for completion. Follow-up calls are done for children who are behind schedule. The PHN provides consultation and education to the WIC staff on immunizations. A list of WIC enrollees aged 12-35 months will be obtained from the WIC Program. A random sample as determined by the CASA software will be used to obtain a cohort for CASA review. The WIC enrollment has steadily been increasing annually and is anticipated to continue to increase in 2006 especially with the new Refugee Screening program. The increased number will result in increased assessment and follow-up. Continue to recommend varicella vaccine according to Advisory Committee on Immunization Practices schedule. Include in WIR documentation of parental refusal of varicella vaccine and disease history.

Contract Objective Details - Complete

Contract #: 13751

Agency: Waupaca County Human Services, Health Services Division

Contract Year: 2006

Program: Immunization

Objective #: 1 of 1

Objective Value: \$13,975

Objective: Primary Details

Objective Statement

During the contract period, 91% of infants born in Waupaca County who turn three months of age in 2006 will receive 1 DTaP, 1 Polio, 1 Hib and 1 HepB vaccine by four months of age.

Deliverable Due Date: 01/31/2007

Contract Deliverable (Evidence)

A report to summarize a statistically valid survey that provides: 1) the total number of children born in Waupaca County who turned three months of age in 2006, 2) CASA or Wisconsin Immunization Registry generated documentation of the number of those children who received 1 DTaP, 1 Polio, 1 Hib and 1 HepB vaccine by four months of age, and 3) the number of those children noted as moved or going elsewhere and those marked as non-responders.

Programs Providing Funds for this Objective

Immunization: \$13,975

Agency Funds for this Objective:

Data Source for Measurement

Wisconsin Immunization Registry records.

Baseline for Measurement

New initiative.

Context

The cohort of children to be analyzed for this objective will be those children born during the period October 1, 2005 through September 30, 2006. Children will be assessed for having at least 1 DTaP, 1 Polio, 1 Hib and 1 HepB vaccine by four months of age. Only children who have moved out of the agency's jurisdiction (MOGE) or have failed to respond to three reminder/recall attempts or their mail has been returned undeliverable may be removed from the cohort for analysis. The goal of this objective is to help identify patient and system level barriers that place children at risk of not completing their primary series of immunization on schedule. Access to primary and preventive health services is one of the priorities identified in Wisconsin's State Health Plan, Healthiest People 2010: A Partnership Plan to Improve the Health of the Public. Children who begin their community-based immunizations by three months of age are more likely to complete the primary series of 4 DTaP, 3 Polio, 1 MMR, 3 Hib, 3 HepB and 1 Varicella by 24 months of age. This objective also addresses the Healthy People 2010: 14-26 goal to "Increase the proportion of children who participate in fully operational population-based immunization registries" by identifying local gaps in Wisconsin Immunization Registry.

Input Activities

Per SPHERE reports, parents of all Waupaca County newborns will receive a congratulations letter which includes an immunization schedule. Free walk-in or appointment immunization clinics are held at the Courthouse and in several outlying communities. Using the SPHERE report, the Wisconsin Immunization Registry (WIR) will be checked for immunization histories. Local health care providers that are not WIR participants will receive a list of newborns who do not have an immunization history in WIR. A second letter will be sent to parents of newborns who do not have an immunization history in WIR. A list of all newborns with no immunization history will be routed to the Public Health Nurses, Healthy Beginnings Program, Early Intervention Program and WIC staff. Staff will follow-up with any newborns on their caseload. A final (third) letter will be sent to parents of newborns if still necessary. Waupaca County's newborn population includes Amish and Hispanic, some of whom do not seek immunizations.

Contract #: 13775
Program: Immunization

Agency: Wauwatosa Health Department
Objective #: 1 of 1

Contract Year: 2006
Objective Value: \$15,117

Objective: Primary Details

Objective Statement

By December 31, 2006, 70% of Wauwatosa children who are less than school age and enrolled in one of the twelve targeted Wauwatosa day care centers, family day care sites or pre-schools will receive age appropriate immunizations.

Deliverable Due Date: 01/31/2007

Contract Deliverable (Evidence)

A report to include documentation of the number of children with age appropriate immunizations who are less than school age and enrolled at the participating family day care sites, day care centers or pre-schools, and the total number of children enrolled in these sites, pre-schools or centers. CASA diskette with baseline.

Programs Providing Funds for this Objective

Immunization: \$11,617
Maternal and Child Health Block Grant: \$3,500

Agency Funds for this Objective:

Data Source for Measurement

CASA audits and hand tallying.

Baseline for Measurement

2005 initial compliance rate in the participating day cares was 60% including Varicella per CASA; 65% based on state day care regulations.

Context

Wauwatosa Health Department began the 2004 day care immunization program with 16 day cares. As of October 15, 2005, three day cares have dropped out of the cohort group for various reasons. the initial cohort included 322 Wauwatosa and non-Wauwatosa children. The immunization compliance rate ranged from 0% to 83% with a composite 61% when varicella is included in the mix. In 2005, the Health Department did not obtain commitment from the eleventh and twelfth day care until April. The initial 2005 cohort of 288 children had a 60% CASA compliance rate with a 65% state day care regulation compliance rate. The Health Department has had difficulty recruiting day cares to participate in the program due to high staff and director turnover and the identification and enforcement of lead hazards in the day cares.

Contract #: 13779
Program: Immunization

Agency: Western Racine County Health Department
Objective #: 1 of 1

Contract Year: 2006
Objective Value: \$13,801

Objective: Primary Details

Objective Statement

By December 31, 2006, 60% of children enrolled in the Western Racine County WIC Project who will be 24 to 35 months of age as of December 31, 2006 and are assessed as not fully immunized will receive all appropriate immunizations.

Deliverable Due Date: 01/31/2007

Contract Deliverable (Evidence)

A report to include documentation of the number of children enrolled in the Western Racine County WIC Project who were 24 to 35 months of age as of December 31, 2006, those assessed as not fully immunized, and those who received all appropriate immunizations.

Programs Providing Funds for this Objective

Immunization: \$13,801

Agency Funds for this Objective:

Data Source for Measurement

Agency records, CASA, WIC reports.

Baseline for Measurement

Assessment of the immunization records and related referral for children enrolled in WIC is required through an agreement between the State WIC and Immunization Programs, with funding provided the Immunization Program. Objectives related to WIC and Immunization must be in addition to these required assessment and referral activities. A CASA data diskette should be sent to the State Regional Office Immunization Program Advisor upon completion of the assessment.

Context

Children will be assessed for their completion or progress for completion of the 4 DTaP, 3 Polio, 1 MMR, 3 Hib, 3 HepB, and 1 Varicella (or disease history) immunization series by 24 months of age. The estimate is there are approximately 50 children in this cohort of children. For evaluation purposes, those children whose families have moved from the jurisdiction or are non-responsive can be removed from this cohort. Non-responsive families would include those who refuse certain or all vaccines because of personal convictions or medical waivers.

Input Activities

In 2002, the Western Racine County Health Department (WRCHD) worked with Western Racine County WIC children, ages two through five, and successfully brought the up-to-date level from 16% to 52%. Historically, this has been a challenging group to reach, considering many transient lifestyles, difficulty with transportation, and lack of education about the importance of immunizations. It will serve the area community well to address immunizations of these children individually and assure easy access to vaccinations. A WRCHD nurse will provide vaccines during the three Western Racine County WIC clinics each month and work with WIC to assure each child in this cohort is evaluated for their immunization needs.

Objective #: 2 of 2

Contract Year: 2006
Objective Value: \$5,761

Objective: Primary Details

Objective Statement

By December 31, 2006, 50 providers from daycares in the Winnebago County Health Department jurisdiction who care for children ages 0-23 months will receive influenza vaccine and written information about influenza prevention methods.

Deliverable Due Date: 01/31/2007

Contract Deliverable (Evidence)

An agency report documenting the number of daycare providers in the Winnebago County Health Department jurisdiction who received the influenza vaccine and information about influenza prevention methods.

Programs Providing Funds for this Objective

Immunization: \$5,761

Agency Funds for this Objective:

Data Source for Measurement

CHAMPS program reports.

Baseline for Measurement

New initiative. A telephone survey of 6 daycare center providers in the Health Department jurisdiction has shown an interest in influenza education and vaccination for the employees. In-home providers will be contacted as well to assess level of interest.

Context

With the CDC recommendation in July 2004 that children ages 6-23 months receive influenza vaccine as part of the routine childhood immunization schedule, it becomes necessary for daycare providers to be educated on the importance of influenza vaccine of infants. Household contacts and out-of-home caregivers for children ages 0-23 months are in the influenza vaccine priority category 2 target group.

Input Activities

A Winnebago County Health Department Public Health Nurse will arrange vaccination times with interested daycares. Information about influenza vaccine and prevention methods will be provided to daycare workers. Both inactivated and live attenuated influenza vaccine will be available to daycare workers who care for children ages 0-23 months.

Objective: Primary Details

Objective Statement

By December 31, 2006, 75% of children residing in Wood County who turn 19 months of age during 2006 will have their 4th dose of DTaP.

Deliverable Due Date: 01/31/2007

Contract Deliverable (Evidence)

A report to summarize a statistically valid survey that provides: 1) the total number of children residing in Wood County who turned 19 months of age in 2006, 2) CASA or Wisconsin Immunization Registry generated documentation of the number of those children who have their 4th dose of DTaP, and 3) the number of those children noted as moved or going elsewhere and those marked as non-responders.

Programs Providing Funds for this Objective

Immunization: \$6,758

Agency Funds for this Objective:

Data Source for Measurement

Wisconsin Immunization Registry records.

Baseline for Measurement

Per RECIN reports, we waiver between 85-94% compliance. Of those children non-compliant, about 50% do not have any DTaPs at all.

Context

Children who will turn 19 months of age during the contract year 2006 will be assessed for receipt of the 4th dose of DTaP. Only children who have moved out of the agency's jurisdiction (MOGE) or have failed to respond to three reminder/recall attempts or their mail has been returned undeliverable may be removed from the cohort for analysis.

Input Activities

Run RECIN reports regularly throughout the year to determine children who are due for the 4th DTaP and have not received it. Contact those families to encourage them to have their child receive the vaccine.
